

Data Sharing Statement

Data

Data available: Yes

Data types: Deidentified participant data

How to access data: ACTIV-6 is a platform trial using shared placebos. On completion of the platform trial, when there is no risk of unblinding across study arms, the data will be made publicly available by depositing it in an approved data repository such as NHLBI's BioData Catalyst.

When available: beginning date: 07-31-2024

Supporting Documents

Document types: None

Additional Information

Who can access the data: ACTIV-6 is a platform trial using shared placebos. On completion of the platform trial, when there is no risk of unblinding across study arms, the data will be made publicly available by depositing it in an approved data repository such as NHLBI's BioData Catalyst.

Types of analyses: ACTIV-6 is a platform trial using shared placebos. On completion of the platform trial, when there is no risk of unblinding across study arms, the data will be made publicly available by depositing it in an approved data repository such as NHLBI's BioData Catalyst.

Mechanisms of data availability: ACTIV-6 is a platform trial using shared placebos. On completion of the platform trial, when there is no risk of unblinding across study arms, the data will be made publicly available by depositing it in an approved data repository such as NHLBI's BioData Catalyst.
