Supplemental Table 2. Association between time from admission to initiation of dapagliflozin and the length of hospital stay.

Variables	the length of hospital stay (days)			
	Univariable correlation analysis		Multivariable linear regression analysis	
	r coefficient	P value	Standardized β	P value
Time from admission to initiation of dapagliflozin (days)	0.46	<0.001	0.48	<0.001
Age (years)	-0.058	0.53	-0.12	0.16
ln NT-pro BNP	0.060	0.51	0.038	0.66
eGFR at admission (mL/min/1.73 m^2)	-0.011	0.90	-0.079	0.40

eGFR, estimated glomerular filtration rate; ln, natural log; NT pro-BNP, N-terminal pro-brain natriuretic peptide
