S8 Appendix: Building age relationships

Building age didn't appear to predict the number of surveyed leaks found (R^2 = 0.088, n=13, p=0.326), RCM simple slope calculated flux (R^2 = 0.028, p=0.537, n=16), or the sum of leakage as quantified by the CGI (R^2=0.08, n=13, p=0.348).

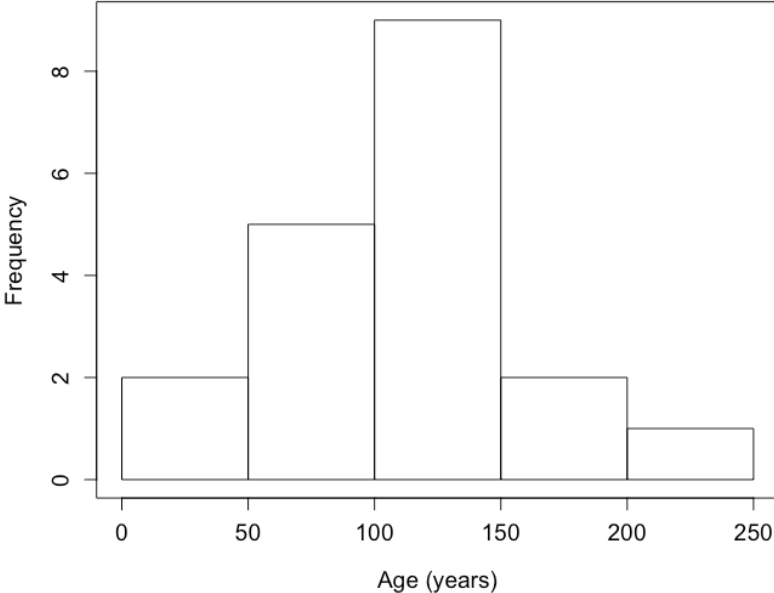

Figure 20. Histogram of ages of buildings studies (n=19)
