Dear Yufei,

Thanks for your inquiry.

After we checked the international cell line database Cellosaurus (<https://www.cellosaurus.org/index.html>), there are no public STR profiling information for either ACH-2 cell line or MOLT-4 CCR5+ cell line. For this reason, after performing the STR profiling of these two cell lines, the data of the two samples could not match the exactly two cell lines of ACH-2 or MOLT-4 CCR5+, but possibly match the ancestry with CCRF-CEM and MOLT-4 separately.

Best regards,

Xuanyi Liang
