

Supplementary Figure 2.Controls

A

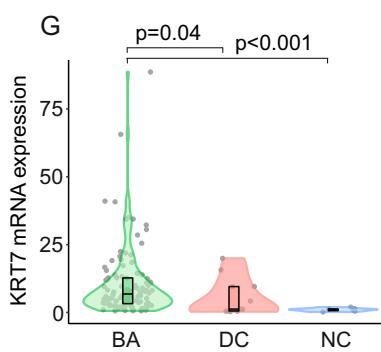

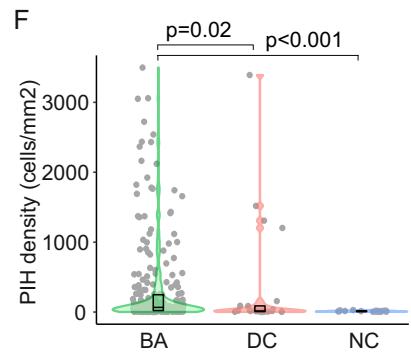

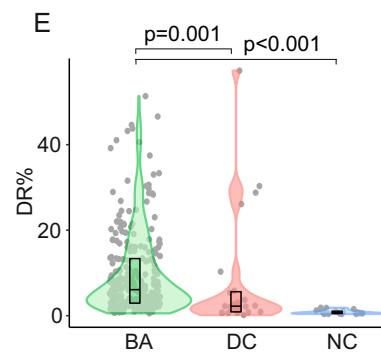

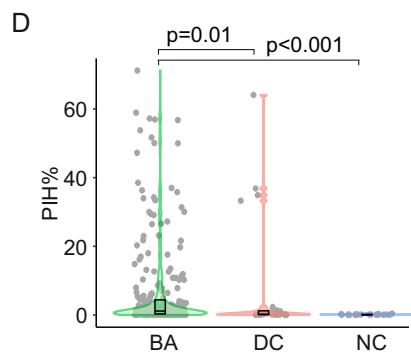

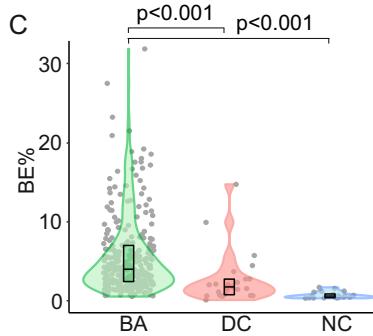

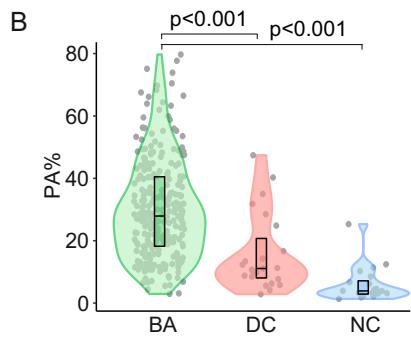

$$PA\% = \frac{\text{Portal area}}{\text{Liver tissue area}}$$

$$BE\% = \frac{\text{BE area}}{\text{Liver tissue area}}$$

$$PIH\% = \frac{\text{PIH area}}{\text{Parenchymal area}}$$

$$DR\% = \frac{\text{PIH area} + \text{BE area}}{\text{Liver tissue area}}$$

$$\text{PIH density} = \frac{\text{PIH cells}}{\text{Parenchymal area}}$$

Supplementary Fig. 2. Formulas for CharBADR components and comparison to controls.

(A) Formulas to calculate CharBADR components. Differences of (B) PA%, (C) BE%, (D) PIH%, (E) DR%, (F) PIH density, and (G) KRT7 mRNA expression between BA patients, cholestatic disease controls, and normal controls. BA, biliary atresia; BE, biliary epithelium; DC, disease control; DR, ductular reaction; KRT7, keratin 7; NC, normal control; PA, portal area; PIH, parenchymal intermediate hepatocytes.
