

MDA-MB-231 ishHIF-1 α tumor

Supplementary Fig. S5. HIF-1 promotes the expression of HSF-1 target genes in TNBC tumors.

A–C mRNA levels of HSF1 target genes (*HSPA1B* (**A**), *HSPA6* (**B**), and *DNAJB1* (**C**)) in tumors of MDA-MB-231 ishHIF-1 α cells treated with or without doxycycline (DOX). Data are presented as the mean \pm SEM and were analyzed using the Mann–Whitney U-test. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.
