Case–Cohort Study of the Association between PFAS and Selected Cancers among Participants in the American Cancer Society’s Cancer Prevention Study II LifeLink Cohort

Andrea Winquist, James M. Hodge, W. Ryan Diver, Juan L. Rodriguez, Alyssa N. Troeschel, Johnni Daniel, and Lauren R. Teras

Table of Contents

Table S1. Definitions used for cancer histologic subtypes using International Classification of Disease for Oncology (ICD-O) histology codes.

Table S2. Comparison of characteristics of study participants for the Overall CPS-II LifeLink cohort (n=39,371), the CPS-II LifeLink Cohort Meeting Case-cohort Study Inclusion Criteria (n=29,985), and participants selected for the sub-cohort (n=1000 selected, 999 with PFAS serum measurements), Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S3. Characteristics of sub-cohort participants and participants with incident cancers, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S4. Results of Quality Control analysis using samples run with study samples, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S5. Percentage of samples with PFAS detections in the subcohort, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S6. Distribution of PFAS serum concentrations among subcohort participants (ng/ml, values below the limit of detection were imputed as the limit of detection divided by the square root of 2), Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S7. Spearman correlation coefficients for correlations between PFAS serum concentrations among subcohort members, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S8. PFAS Distributions (ng/ml) in the subcohort by categories of covariates, using values with values below the limit of detection imputed as the limit of detection divided by the square root of 2, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S9. Results from primary models for overall cancer sites, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S10. Results from primary models for histologic subtypes, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S11. Ratio of the number of cases to the number of parameters in various models, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Figure S1. Timeline of study participant recruitment, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Figure S2. Hematologic sub-groups considered, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Figure S3. Box plots of PFAS serum concentrations among subcohort participants and participants with incident cancers (ng/ml), Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Figure S4. Hazard ratios and 95% confidence intervals from primary models for overall cancer site groups per doubling of PFAS concentrations (using log₂-transformed measures) [solid circles] and for quartiles defined among cases relative to quartile 1 [open circles], Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Figure S5. Hazard ratios and 95% confidence intervals from primary models for histologic sub-groups for bladder and kidney cancer per doubling of PFAS concentrations (using log₂-transformed measures) [solid circles] and for quartiles defined among cases relative to quartile 1 [open circles], Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Figure S6. Hazard ratios and 95% confidence intervals from primary models for histologic subgroups for hematologic malignancies per doubling of PFAS concentrations (using log₂-transformed measures) [solid circles] and for quartiles defined among cases relative to quartile 1 [open circles], Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015.

Table S1. Definitions used for cancer histologic subtypes using International Classification of Disease for Oncology (ICD-O) histology codes

Cancer site and histologic subtypes	ICD-O codes
Kidney-all	All
Renal cell carcinoma/adenocarcinoma (RCC)	8010, 8260, 8310, 8312, 8317, 8318, 8323
Bladder -all	All
Transitional cell carcinoma of the bladder (TCC-B)	8120, 8122, 8130
Transitional cell carcinoma of the bladder or kidney (TCC-BK)	8120, 8122, 8130
Breast (female only)	All
Prostate (male only)	All
Pancreas- all	All
Non-islet cell carcinoma/neuroendocrine tumors	Excluding 8150, 8246
Hematopoietic (lymphoma, leukemia or myeloma)- (Heme)	All
Myeloid malignancies (MYELO)	9840, 9860, 9861, 9863, 9867, 9871, 9872, 9873, 9874, 9875, 9876, 9891, 9895, 9920, 9945
Lymphoid malignancies (LYMPH)	9590, 9591, 9596, 9650, 9652, 9663, 9670, 9671, 9673, 9675, 9680, 9684, 9687, 9689, 9690, 9691, 9695, 9698, 9699, 9700, 9701, 9702, 9705, 9709, 9714, 9718, 9728, 9729, 9732, 9823, 9827, 9831, 9834, 9835, 9940
Non-Hodgkin Leukemia/Lymphoma (NHL) ^b	9591, 9670, 9671, 9673, 9675, 9680, 9684, 9687, 9689, 9690, 9691, 9695, 9698, 9699, 9700, 9701, 9702, 9705, 9709, 9714, 9718, 9728, 9729, 9732, 9823, 9827, 9831, 9834, 9835, 9940
NHL without Multiple Myeloma (NHL without MM)	9591, 9670, 9671, 9673, 9675, 9680, 9684, 9687, 9689, 9690, 9691, 9695, 9698, 9699, 9700, 9701, 9702, 9705, 9709, 9714, 9718, 9728, 9729, 9823, 9827, 9831, 9834, 9835, 9940
B-cell NHL (B-NHL)	9670, 9671, 9673, 9680, 9687, 9689, 9690, 9691, 9695, 9698, 9699, 9728, 9732, 9823, 9940
B-cell NHL without Multiple Myeloma (B-NHL without MM)	9670, 9671, 9673, 9680, 9687, 9689, 9690, 9691, 9695, 9698, 9699, 9728, 9823, 9940
Diffuse Large B-cell Lymphoma (DLBCL)	9680
Chronic lymphocytic leukemia/Small lymphocytic lymphoma/Mantle cell lymphoma (CLL/SLL)	9670, 9673, 9823
Multiple Myeloma (MM)	9732

Table S2. Comparison of characteristics of study participants for the Overall CPS-II^a LifeLink cohort (n=39,371), the CPS-II LifeLink Cohort Meeting Case-cohort Study Inclusion Criteria^b (n=29,985), and participants selected for the sub-cohort^c (n=1000 selected, 999 with PFAS^a serum measurements^d), Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015

	CPS-II ^a LifeLink	CPS-II ^a LifeLink Cohort Meeting Study Inclusion Criteria ^b	Participants selected for the sub- cohort ^c	Participants in the sub-cohort with PFAS measurements ^d

Median age at blood collection (years)	71	70	70	70

^aCPS-II=Cancer Prevention Study II, PFAS=per- and polyfluoroalkyl substances

^bStudy inclusion criteria for the sub-cohort included the following:

- 1) no previous cancer diagnosis (other than non-melanoma skin cancer) at the time of blood sample collection (1998-2001)
- 2) at least 500 µl of stored serum available for the study
- 3) For women, post-menopausal as of the time of the 1997 survey

^cThe sub-cohort was a random sample stratified by sex (500 men and 500 women). The sub-cohort sample size was based on consideration of study power (including for sex-specific analyses) and cost.

^dAfter the sub-cohort was selected, it was determined that the available serum was insufficient for 1 person (female) selected for the sub-cohort.

Table S3. Characteristics of sub-cohort participants and participants with incident cancers, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015

	Subcohort n (%)	Bladder cancer cases n (%)	Breast cancer cases n (%) ^a	Kidney cancer cases n (%)	Pancreatic cancer cases n (%)	Prostate cancer cases n (%) ^a	Hematologic malignancy cases n (%)

^a PFHxS=perfluorohexane sulfonic acid, PFNA=perfluorononanoic acid, PFOA=perfluoroctanoic acid, PFOS=perfluorooctane sulfonate

^b All models had separate baseline hazards by sex or were restricted to one sex. The primary models controlled for year of serum sample collection (single-year categories), age at serum collection (<60, 60–64, 65–69, 70–74, 75–79, ≥80 years), race (non-Hispanic white, other), education (high school graduate or less, vocational/trade school or some college, college graduate, graduate school), smoking status (current smoker, former smoker, ever smoked but unknown if current or former, never smoked), and alcohol consumption (non-drinker, <1 drink/week, 1–6 drinks/week, 1 drink/day, ≥2 drinks/day).

^c HR=hazard ratio, CI=confidence interval

Table S10. Results from primary models for histologic subtypes, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015. Continuous results are for log2 transformed concentrations.

Cancer Type ^a	Type of PFAS ^b	Exposure Measure	Concentration Range (ng/ml)	Both Sexes			Females			Males

^aTCC-B-transitional cell carcinoma of the bladder, TCC-BK-transitional cell carcinoma of the bladder or kidney, RCC=Renal cell carcinoma/adenocarcinoma, MYELO=myeloid malignancies, LYMPH=lymphoid malignancies, BNHL=B-cell non-Hodgkin leukemia/lymphoma, DLBCL=diffuse large B-cell lymphoma, CLL/SLL=chronic lymphocytic leukemia/small lymphocytic lymphoma/mantle cell lymphoma, MM=multiple myeloma

^b PFHxS=perfluorohexane sulfonic acid, PFNA=perfluorononanoic acid, PFOA=perfluorooctanoic acid, PFOS=perfluorooctane sulfonate

^cAll models had separate baseline hazards by sex or were restricted to one sex. The primary models controlled for year of serum sample collection (single-year categories), age at serum collection (<60, 60–64, 65–69, 70–74, 75–79, ≥80 years), race (non-Hispanic white, other), education (high school graduate or less, vocational/trade school or some college, college graduate, graduate school), smoking status (current smoker, former smoker, ever smoked but unknown if current or former, never smoked), and alcohol consumption (non-drinker, <1 drink/week, 1–6 drinks/week, 1 drink/day, ≥2 drinks/day).

^d HR=hazard ratio, CI=confidence interval

Table S11. Ratio of the number of cases to the number of parameters in various models, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015

	Case counts			Ratio of cases to parameters in primary models with log2 PFAS (20 parameters)			Ratio of cases to parameters in primary models with PFAS quartiles (22 parameters)			Ratio of cases to parameters in collapsed models with log2 PFAS (13 parameters)			Ratio of cases to parameters in collapsed models with PFAS quartiles (15 parameters)

^a TCC-B=transitional cell carcinoma of the bladder, TCC-BK=transitional cell carcinoma of the bladder or kidney, RCC=Renal cell carcinoma/adenocarcinoma, MYELO=myeloid malignancies, LYMPH=lymphoid malignancies, BNHL=B-cell non-Hodgkin leukemia/lymphoma, DLBCL=diffuse large B-cell lymphoma, CLL/SLL=chronic lymphocytic leukemia/small lymphocytic lymphoma/mantle cell lymphoma, MM=multiple myeloma

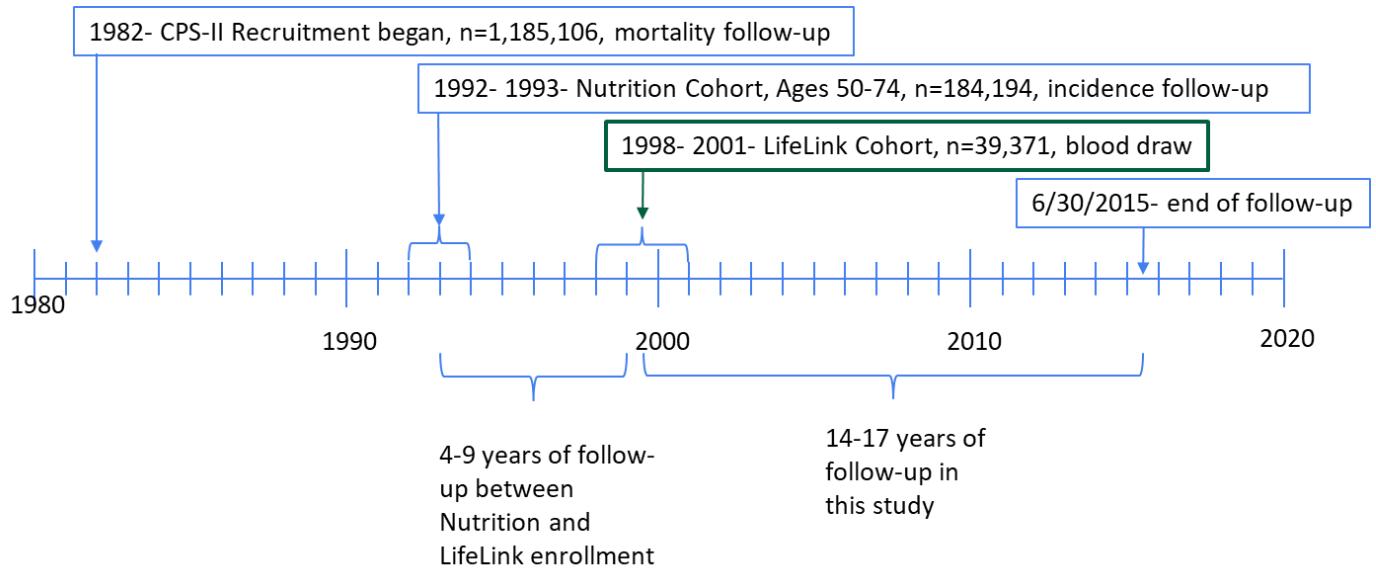

Figure S1. Timeline of study participant recruitment, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015

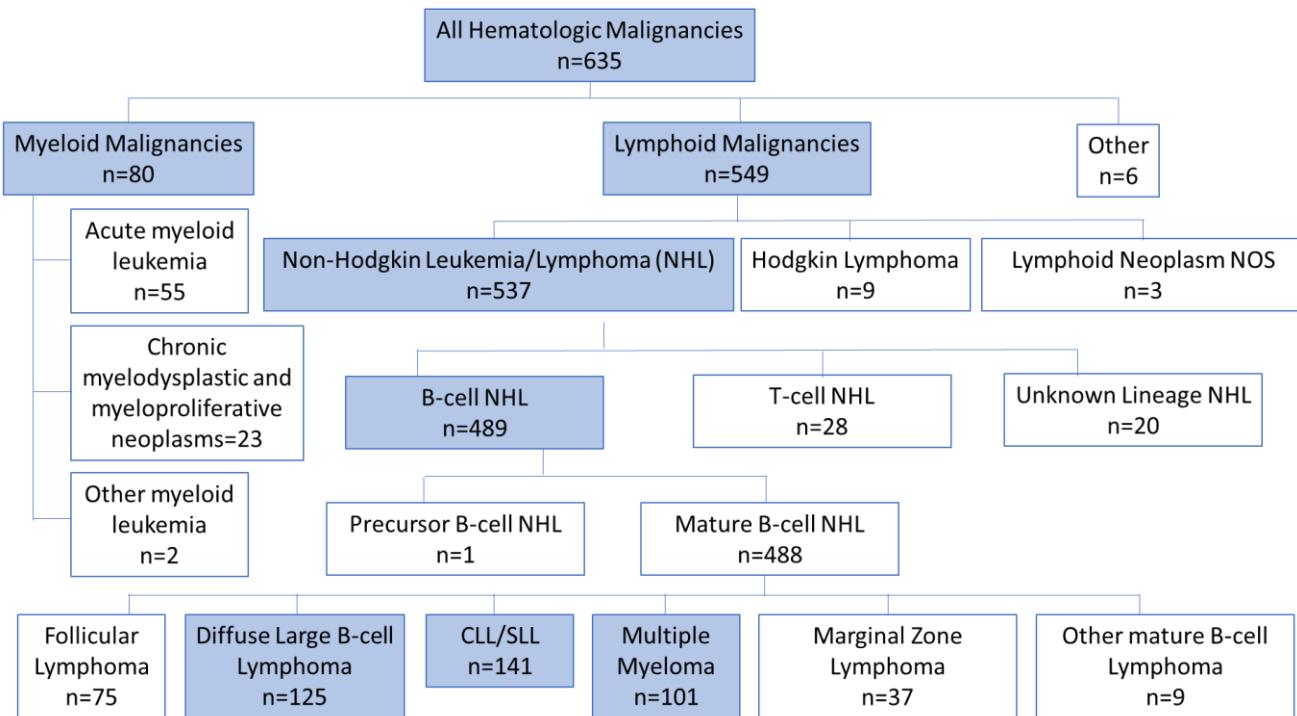

Figure S2. Hematologic sub-groups considered, Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015. NHL=Non-Hodgkin Leukemia/Lymphoma, CLL/SLL= chronic lymphocytic leukemia/small lymphocytic lymphoma/mantle cell lymphoma.

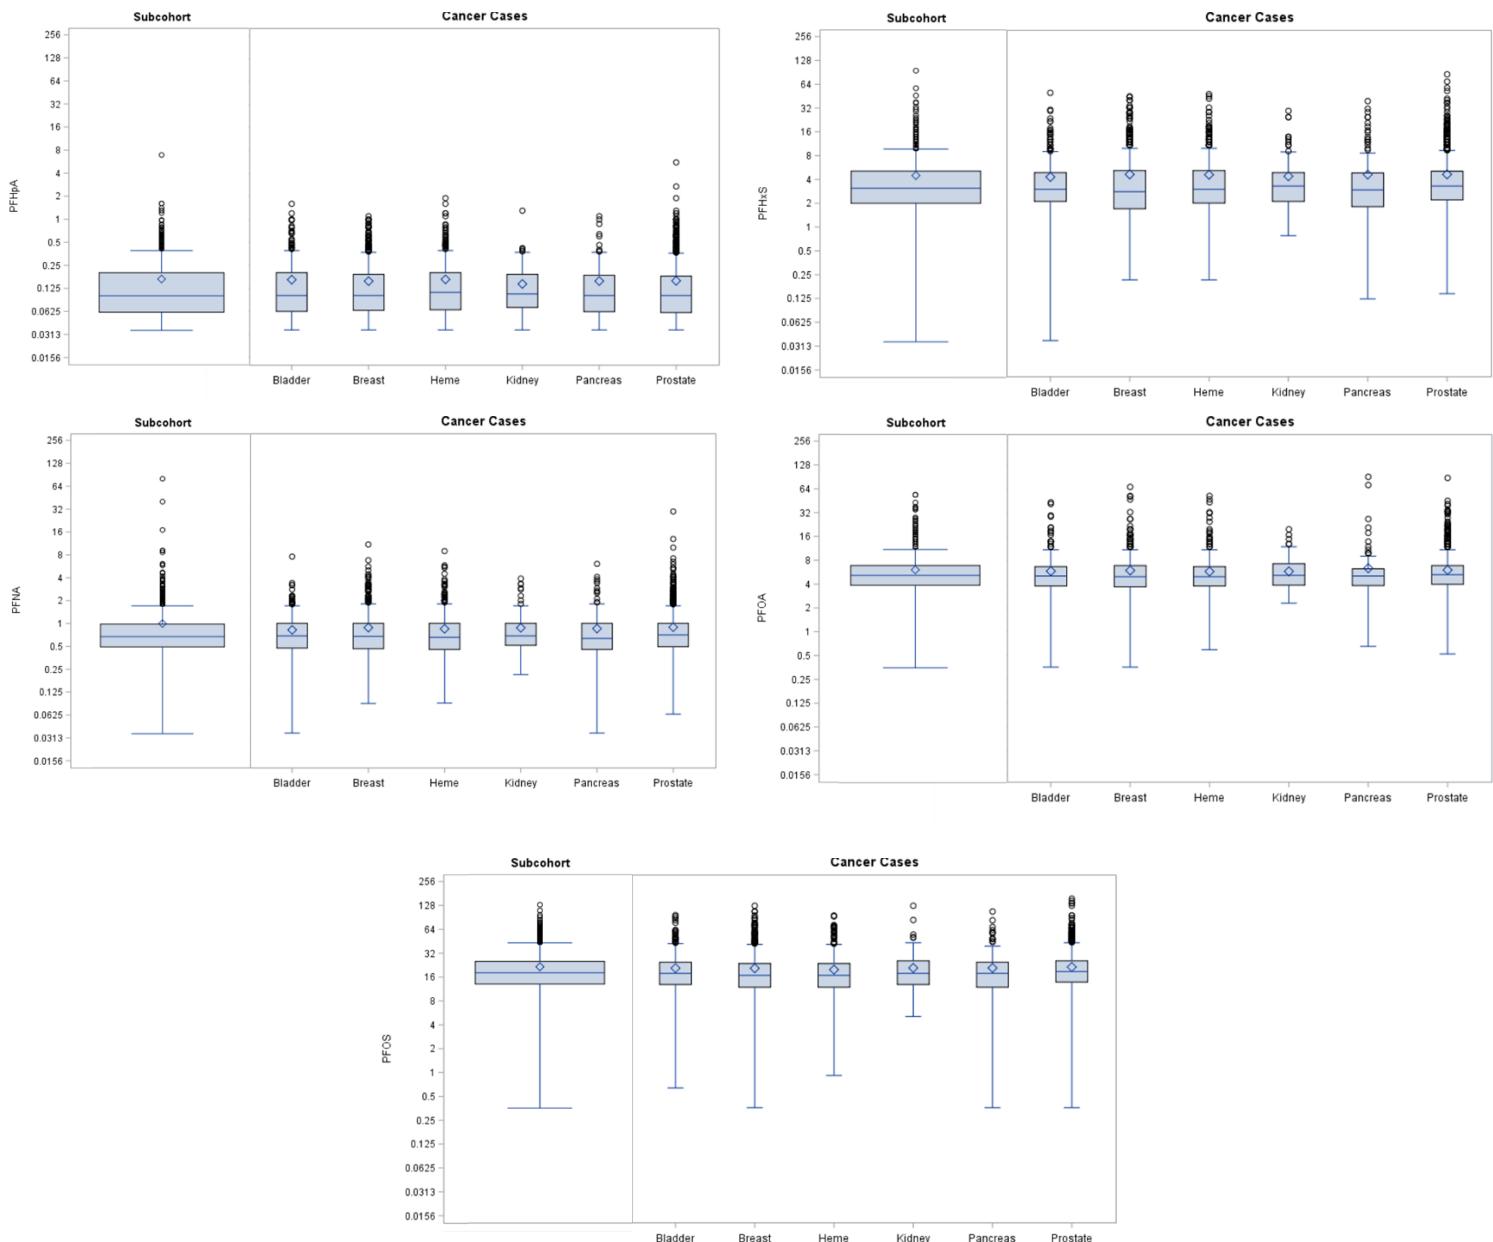

Figure S3. Box plots of PFAS serum concentrations among subcohort participants and participants with incident cancers (ng/ml), Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015. Values below the limit of detection were imputed as the limit of detection divided by the square root of 2, values are displayed on a log2 scale. Heme=hematologic malignancies, PFHpA=perfluorooctanoic acid, PFHxS=perfluorohexane sulfonic acid, PFNA=perfluorononanoic acid, PFOA=perfluorooctanoic acid, PFOS=perfluorooctane sulfonate

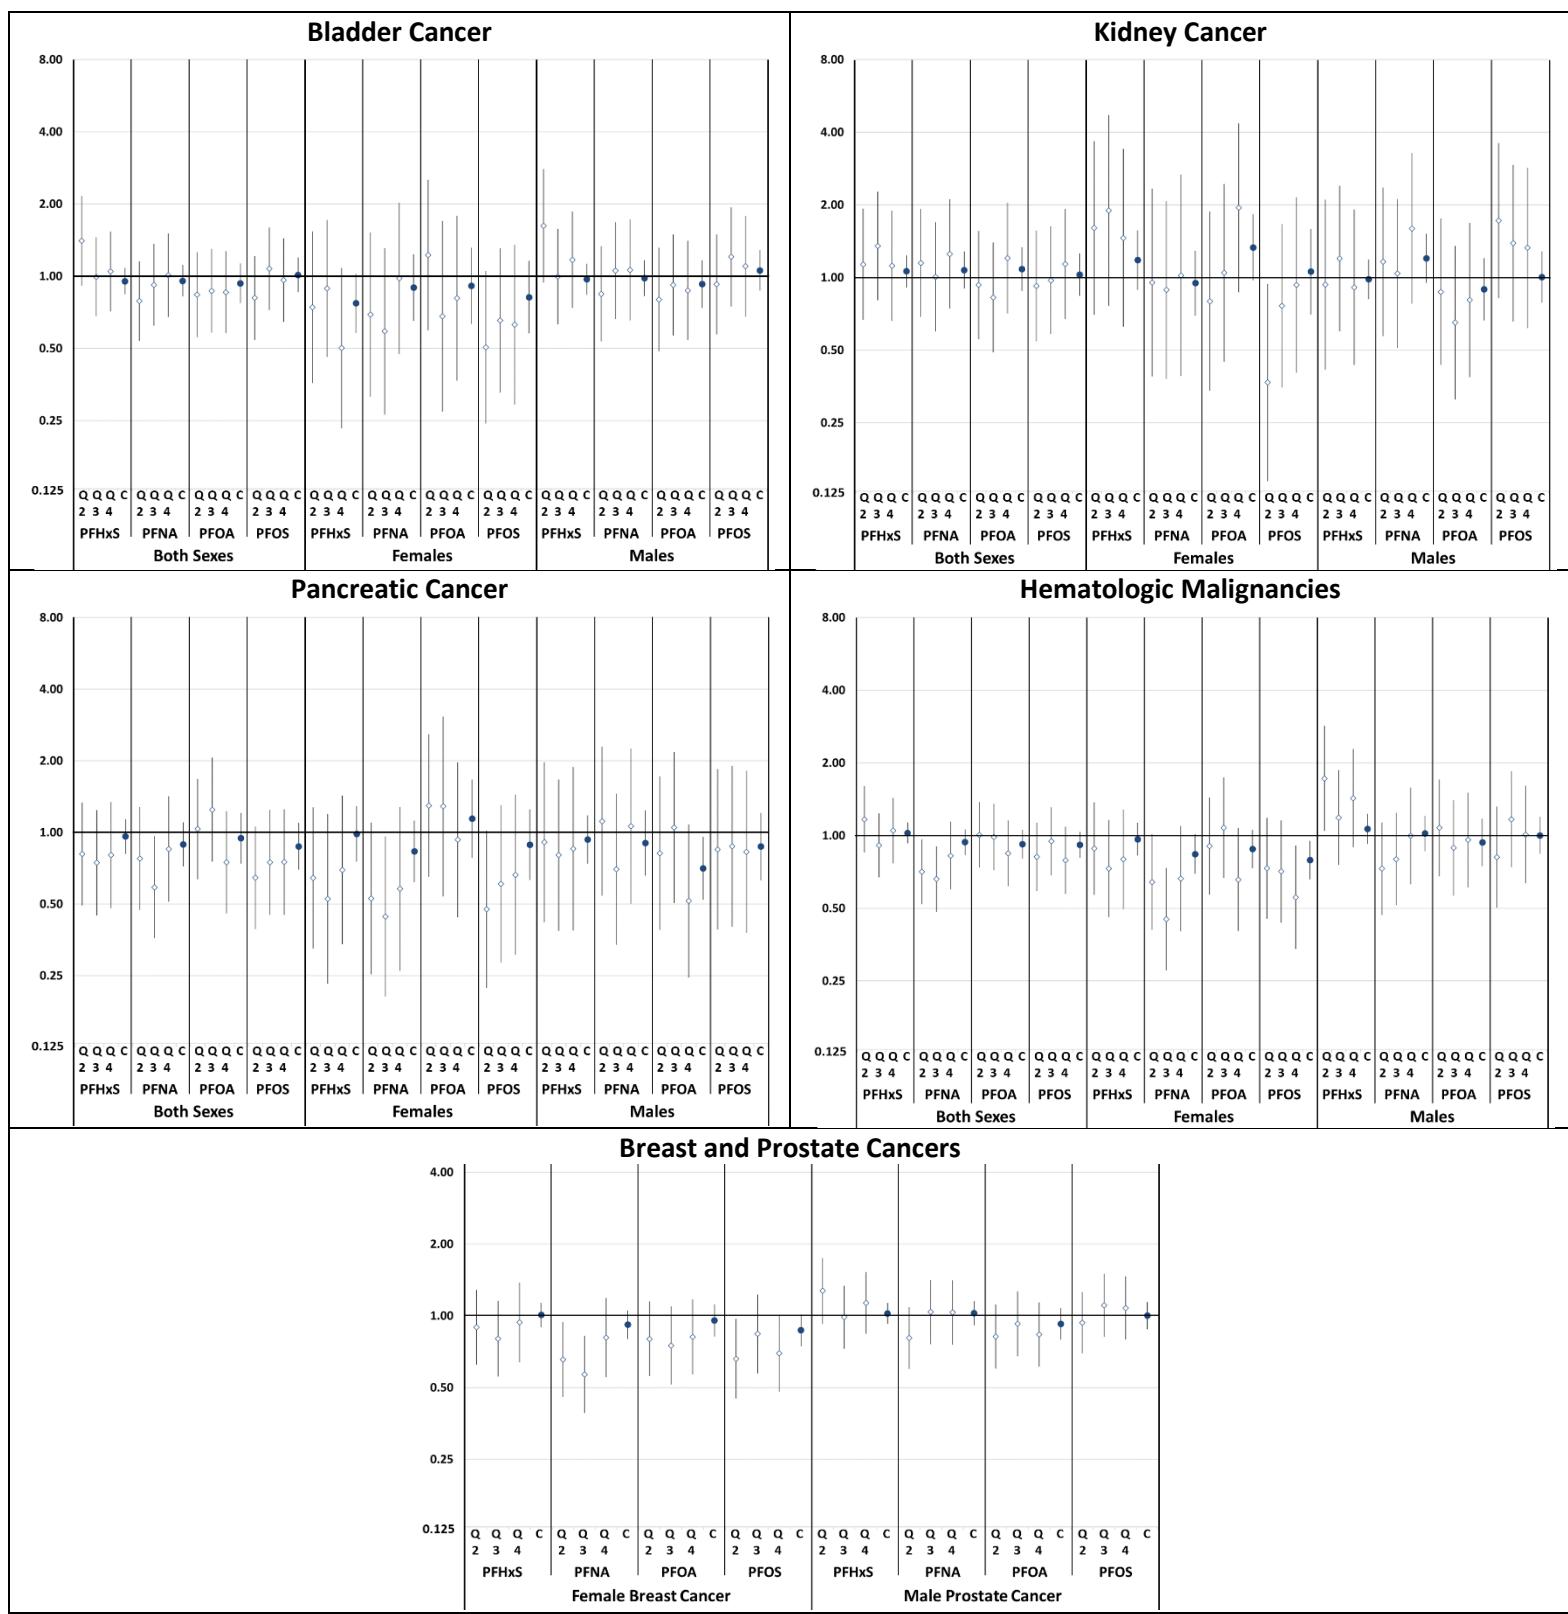

Figure S4. Hazard ratios and 95% confidence intervals from primary models for overall cancer site groups per doubling of PFAS concentrations (using log₂-transformed measures) [solid circles] and for quartiles defined among cases relative to quartile 1 [open circles], Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998-2015. All models had separate baseline hazards by sex or were restricted to one sex. Models controlled for year of serum sample collection, age at serum collection, race, education, smoking status, and alcohol consumption. Q2=quartile 2, Q3=quartile3, Q4=quartile 4, C=continuous log₂-transformed measure, PFHxS=perfluorohexane sulfonic acid, PFNA=perfluorononanoic acid, PFOA=perfluorooctanoic acid, PFOS=perfluorooctane sulfonate. See Table S9 for numerical data.

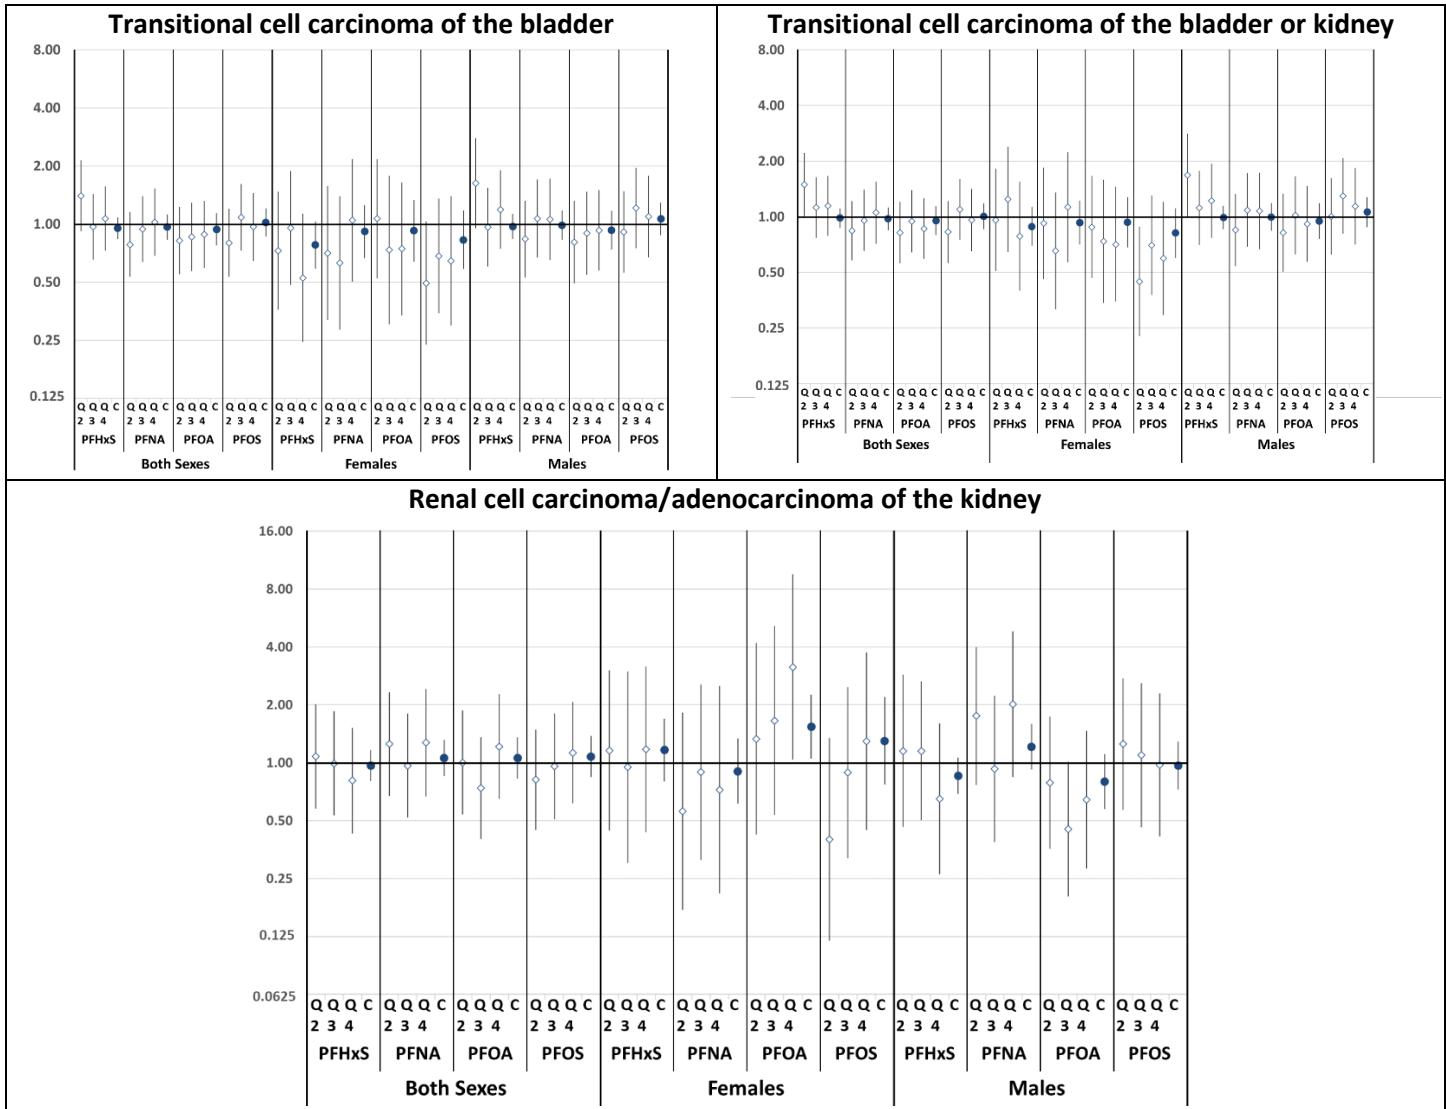

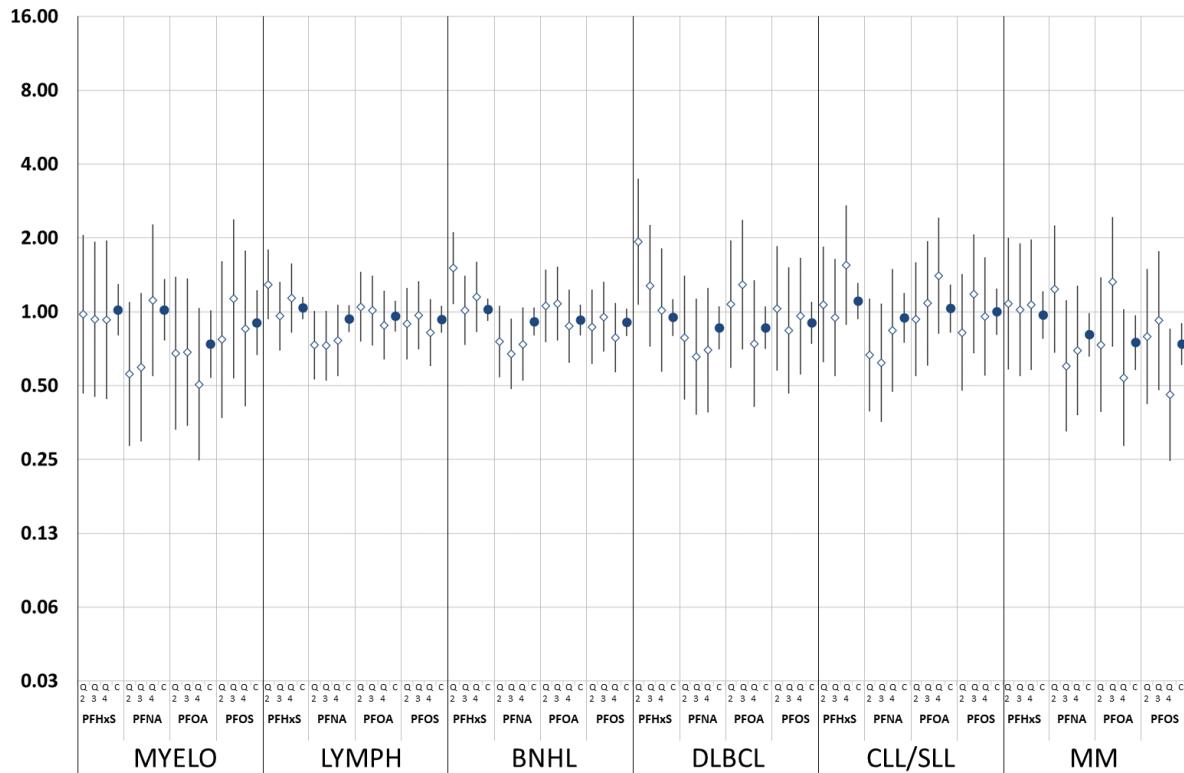

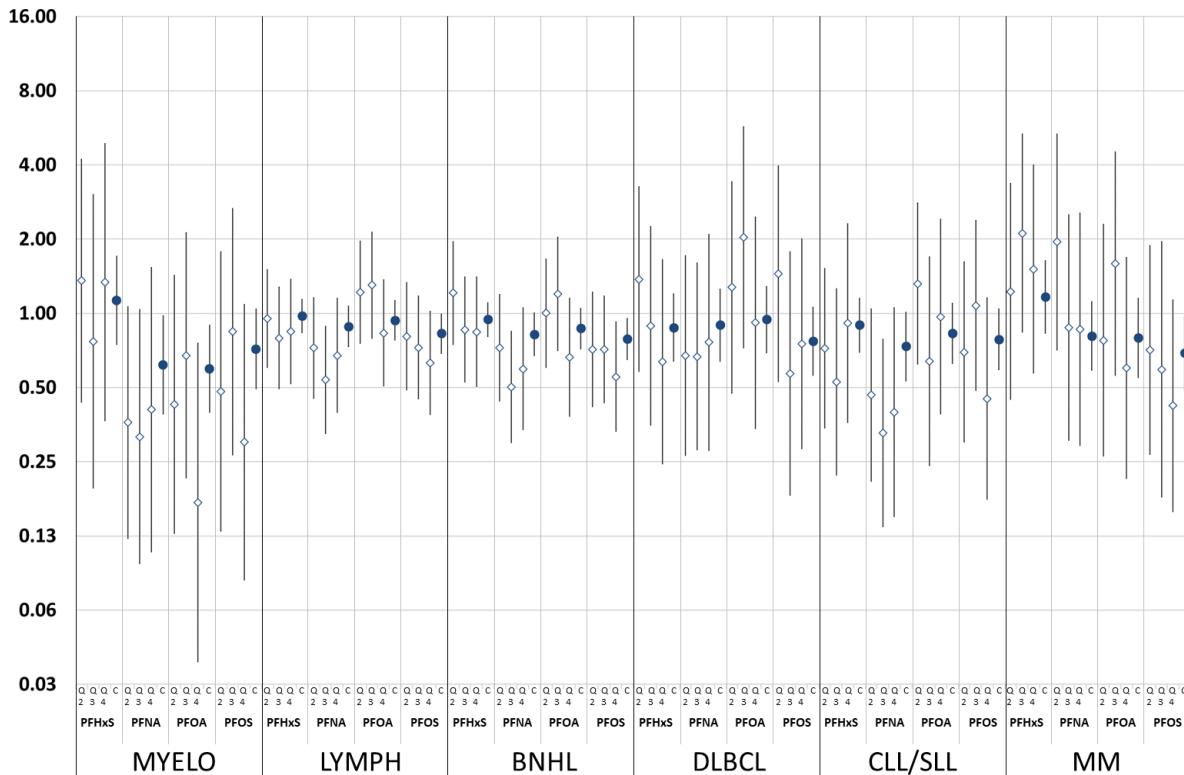

Figure S5. Hazard ratios and 95% confidence intervals from primary models for histologic sub-groups for bladder and kidney cancer per doubling of PFAS concentrations (using log₂-transformed measures) [solid circles] and for quartiles defined among cases relative to quartile 1 [open circles], Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998–2015. All models had separate baseline hazards by sex or were restricted to one sex. Models controlled for year of serum sample collection, age at serum collection, race, education, smoking status, and alcohol consumption. Q2=quartile 2, Q3=quartile3, Q4=quartile 4, C=continuous log₂-transformed measure, PFHxS=perfluorohexane sulfonic acid, PFNA=perfluorononanoic acid, PFOA=perfluorooctanoic acid, PFOS=perfluorooctane sulfonate. See Table S10 for numerical data.

Both Sexes

Females

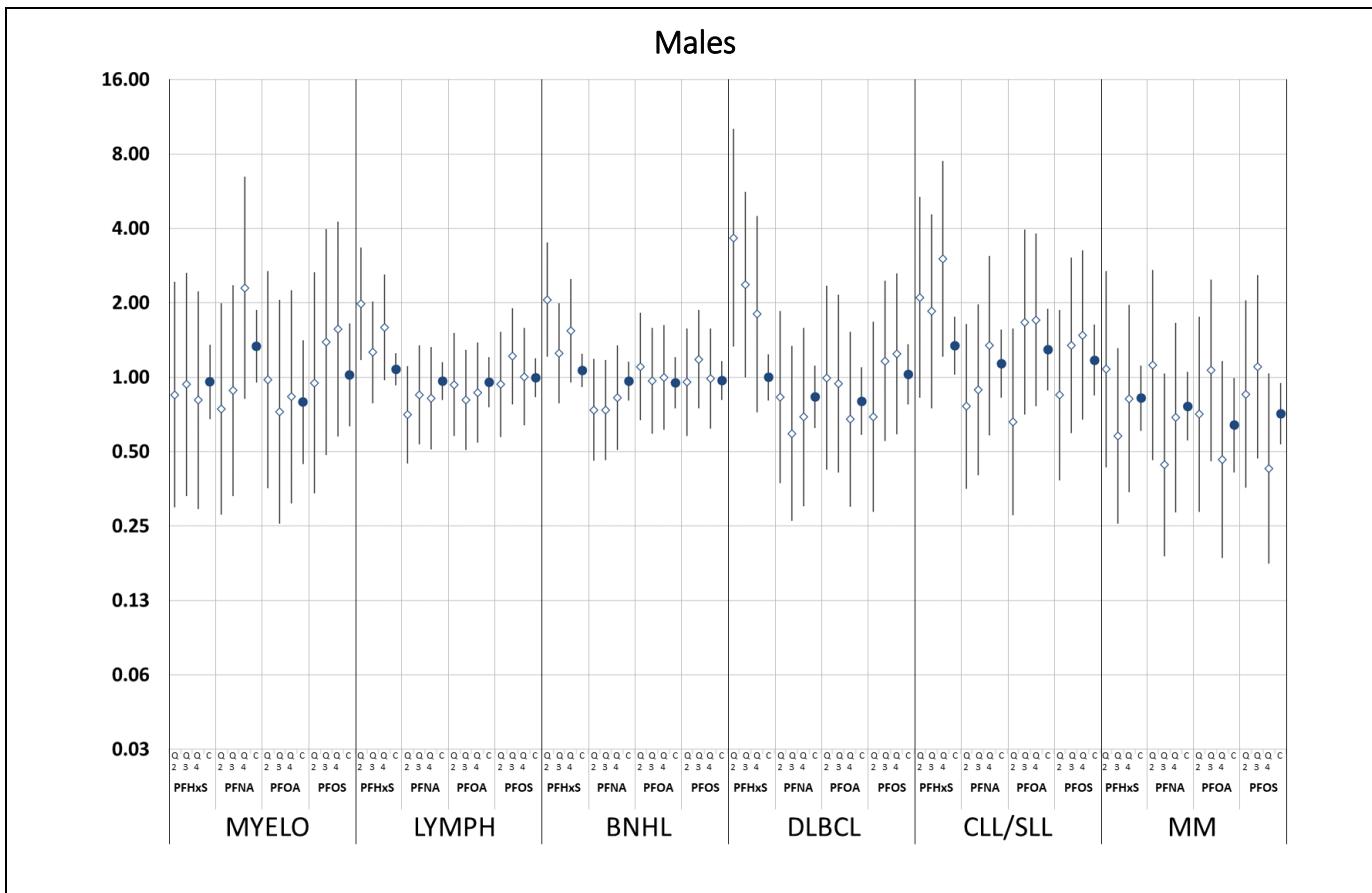

Figure S6. Hazard ratios and 95% confidence intervals from primary models for histologic sub-groups for hematologic malignancies per doubling of PFAS concentrations (using log₂-transformed measures) [solid circles] and for quartiles defined among cases relative to quartile 1 [open circles], Case-cohort study of association between PFAS and selected cancers among participants in the Cancer Prevention II LifeLink cohort, 1998–2015. All models had separate baseline hazards by sex or were restricted to one sex. Models controlled for year of serum sample collection, age at serum collection, race, education, smoking status, and alcohol consumption.
