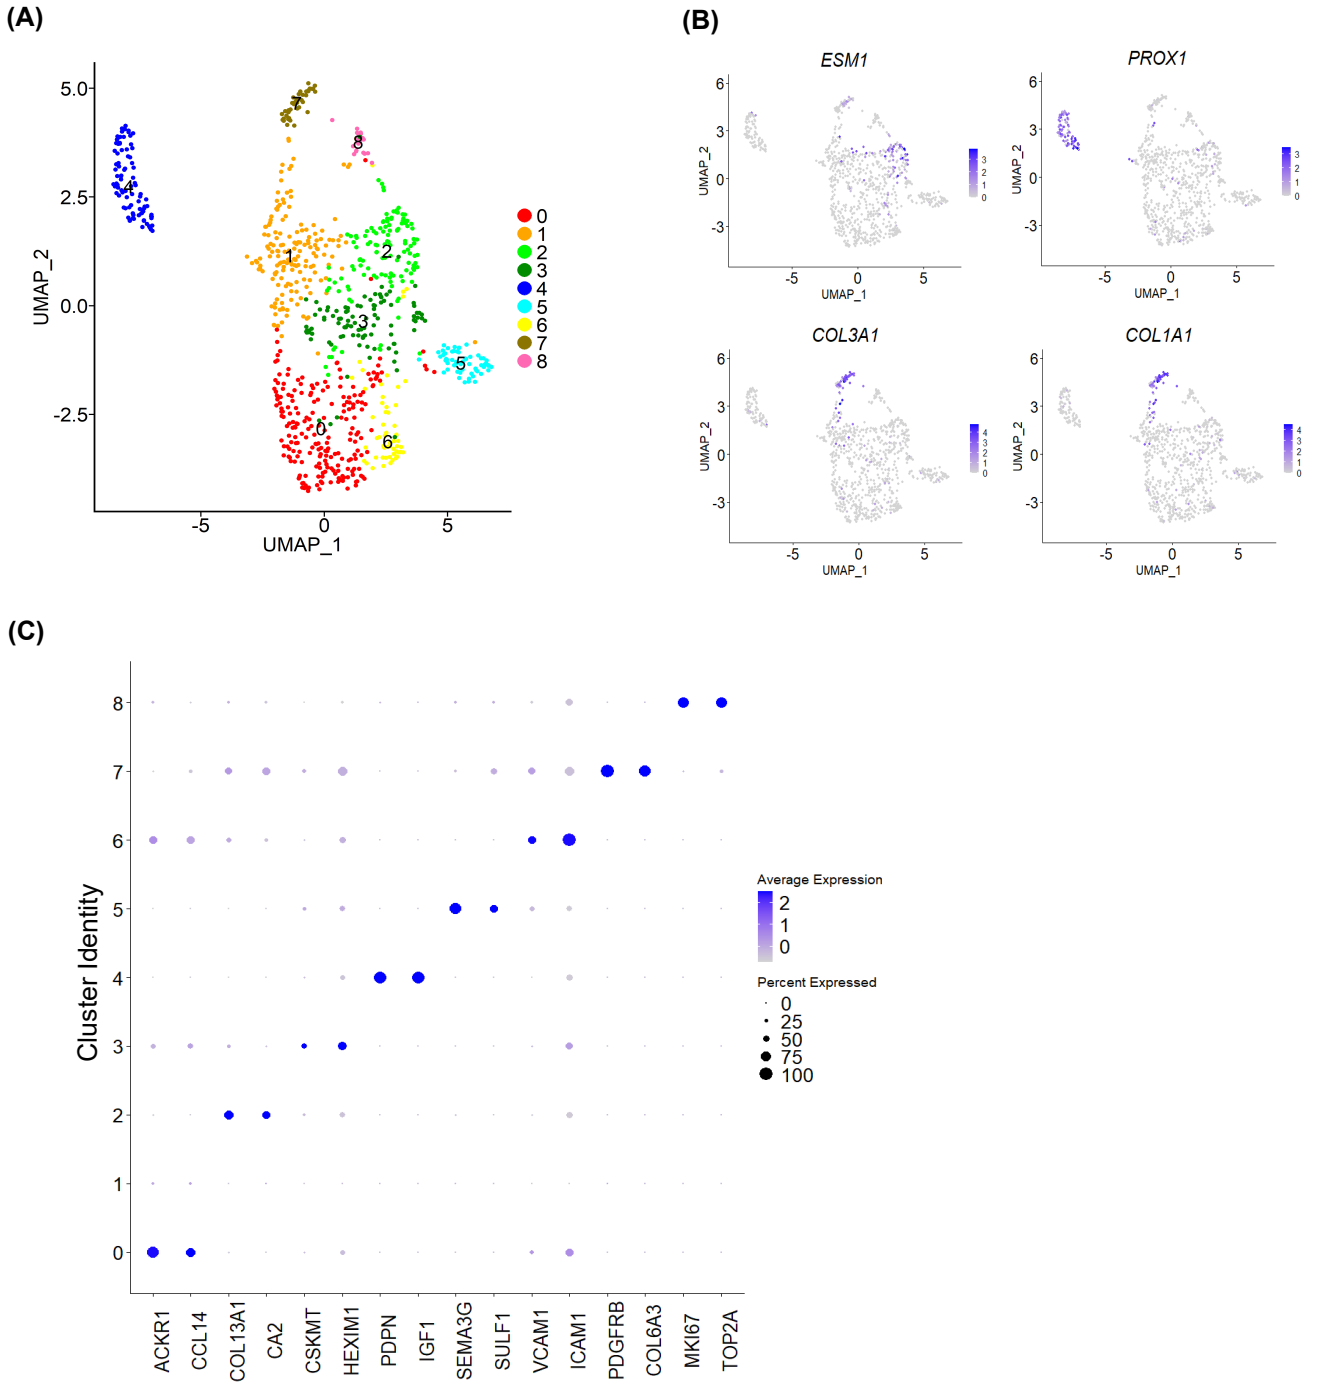
Figure S12:


(A) UMAP plot of the expression profiles of endothelial cells. Each cell is denoted by a dot and UMAP is colored by cluster. (B) Feature plot showing distribution and expression of ESM1, PROX1, COL1A1, and COL3A1 across clusters. Color intensity represents the gene expression level. (C) Dot plot showing expression of top two genes across clusters. Color intensity represents the average gene expression level. Gene names are on the x-axis and Cluster Identity on the y-axis.
