

Figure S4. Ufm1 is not required for IFN $\gamma$ -induced inhibition of norovirus replication in BV-2 cells. Plaque assay of WT or Ufm1<sup>-/-</sup> BV-2 cells. Average data pooled from two independent experiments are represented as means  $\pm$  SEM. P value  $\leq$  0.05 (\*),  $\leq$  0.01 (\*\*),  $\leq$  0.001 (\*\*\*),  $\leq$  0.0001 (\*\*\*\*) were considered statistically significant. ns, not significant. P value determined by 2-way ANOVA with Dunnett's multiple comparison test.
