

**Supplementary Figure 3. I-Tomcat cells express TdTomato following *in vitro* stimulation, but the TdTomato signal is undetectable *in vivo* during *Mtb* infection. Using I-Tomcat Ai6 mice, pDC, IMs, and monocytes are the major type I interferon producing cells following *Mtb* infection<sup>+/+</sup> in B6 and *Sp140<sup>-/-</sup>* mice. Related to Figure 3.**
