

High/Low (cohort median ORF1p)

Positive/Negative (majority vote)

Supplementary Figure 27. Kaplan-Meier Survival Analysis by ORF1p. Cohorts are plotted for two different ORF1p classifiers: (left) divided by the cohort median and (right) using a “majority vote” of two of the three 2nd generation assays; note that the two metrics divide GE cancers equally in this cohort. Shaded boxes: 95% confidence intervals; p values: log rank test.
