Summary: 12 pages, 2 figures, 4 tables

Table/figure	Page
Table S1: General characteristics of the study population.	S2
Table S2: Serum concentrations of 12 PFASs analysed in serum of CELSPAC: YA participants in ng/mL and detection frequency.	S2
Figure S1: Matrix expressing the correlation between serum levels of 7 studied PFASs. Statistically significant correlation is marked with * (p-value < 0.05).	S3
Table S3: Counts of significantly ($p<0.05$) associated genes with 7 studied PFASs.	S3
Figure S2: Genes significantly associated ($p < 0.05$) with multiple PFAS exposure (with at least 4 PFASs).	S4-S7
Table S4: Enriched gene sets or “entities” ($p < 0.05$) associated with multiple PFAS exposure (i.e., at least 4 PFASs) identified by gene set enrichment analysis (GSEA).	S8-S12

Table S1: General characteristics of the study population. Variables are described as median (1st quartile - 3rd quartile) or number of participants (respective percentage portion).

Variable		N = 288
Sex	women	145 (50.35%)
	men	143 (49.65%)
Age (years)		27 (26 - 27)
BMI		23.48 (21.57 - 26.07)
Smoking status	non-smokers	199 (69.1%)
	smokers	89 (30.9%)
Alcohol consumption	rare (\leq once a week)	157 (54.51%)
	often ($>$ once week)	131 (45.49%)
Education	primary and secondary	71 (24.65%)
	university	217 (75.35%)

Smoking status: Determined based on the answer to the question: "Have you smoked more than 100 cigarettes during your life?".

Alcohol consumption: Determined based on the question: "How often did you drink alcohol in the last month?".

BMI = body mass index.

Table S2: Serum concentrations of 12 PFASs analysed in serum of CELSPAC: YA participants in ng/mL and detection frequency.

Figure S2 (below): Genes significantly associated ($p < 0.05$) with multiple PFAS exposure (with at least 4 PFASs). The left column contains β coefficient from linear regression and the right column contain corresponding p-values. In right column, red colour marks statistically significant results ($p\text{-value} < 0.05$); colour in the left column indicates the positive (red) or negative (blue) association between gene and PFAS exposure. PFPA = Perfluoropentanoate, PFOA = Perfluorooctanoate, PFNA = Perfluorononanoate, PFDA = Perfluorodecanoate, PFUnDA = Perfluoroundecanoate, PFHxS = Perfluorohexane sulfonate, PFOS = Perfluorooctane sulfonate.

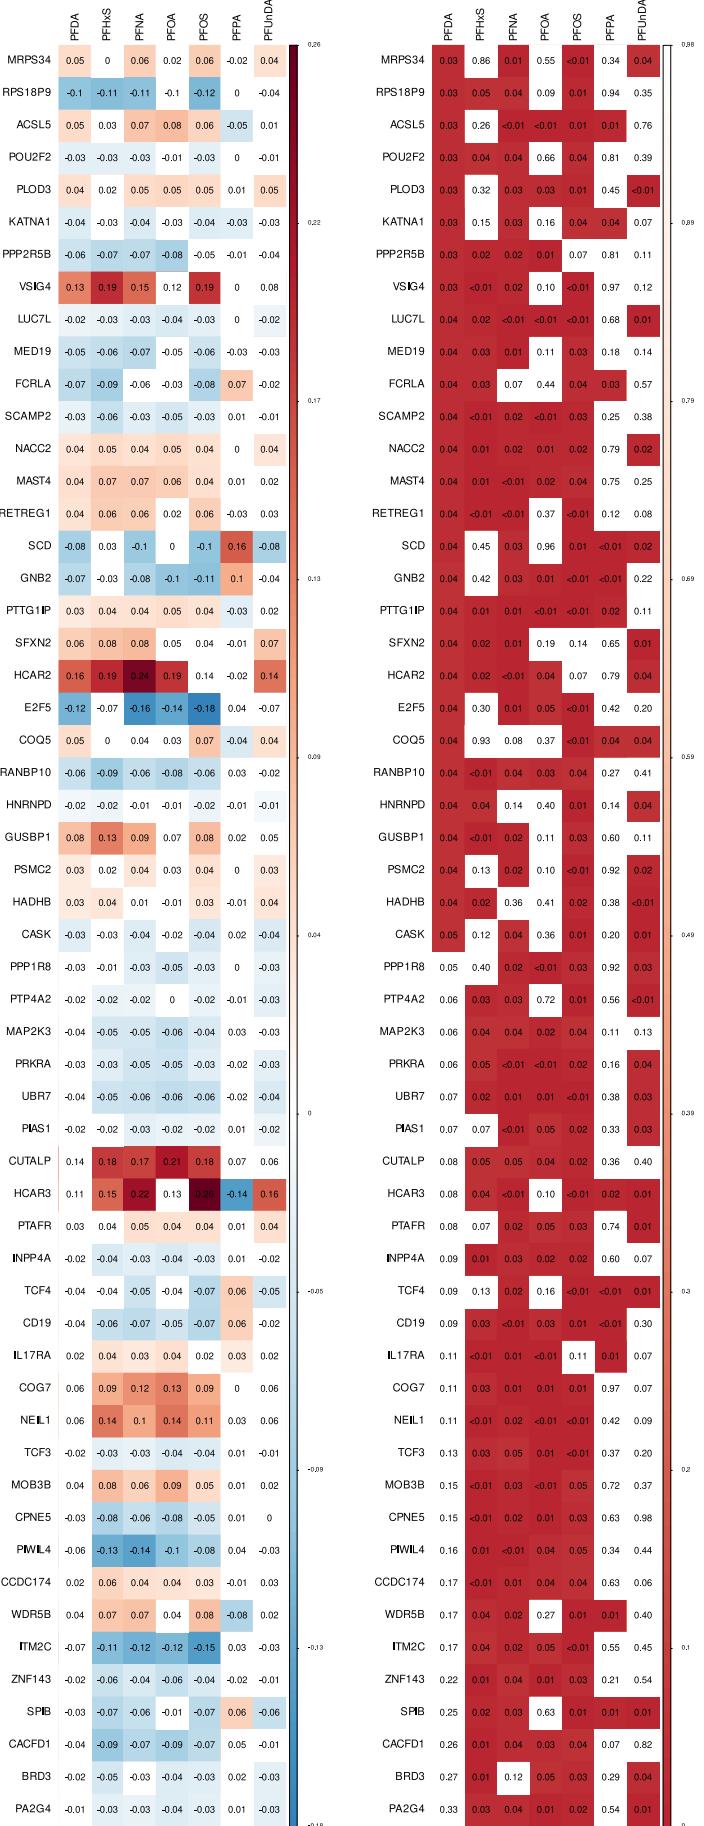

Table S4: Enriched gene sets or “entities” ($p < 0.05$) associated with multiple PFAS exposure (i.e., at least 4 PFASs) identified by gene set enrichment analysis (GSEA). Provided in the table are the names of the category, overlapping genes, p-value for enrichment, and the broader category of classification.
