

Supplementary materials

Table legends:

Supplementary Table S1: attached EXCEL file

Marker coordinates and primer sequences.

Supplementary Table S2: attached EXCEL file

Clinical and methylation data for all samples.

Supplementary Table S3: Patient characteristics.

Myeloablative, Reduced intensity and non-myeloablative are the following (based on CIBMTR consensus published in BBMT 2009): **Myeloablative:** TBI \geq 500 cGy as a single fraction or \geq 800 cGy if fractionated, Total busulfan \geq 9 mg/kg, Total melphalan \geq 150 mg/m², Thiotepa \geq 10 mg/kg. **Non-Myeloablative:** Busulfan \leq 6.4 mg/kg. **Reduced Intensity Conditioning:** Regimens that do not meet the criteria for MA and NMA.

***Abbreviations:** AML- acute myeloid leukemia; ALL-acute lymphoid leukemia, MSD-matched sibling donor; MRD-matched related donor; MUD-matched unrelated donor; Haplo-haploidentical donor; PBMC-peripheral blood stem cells; BM-bone marrow; MA-myeloablative; RIC-Reduced intensity, NMA-nonmyeloablative; UK-unknown; CSA-cyclosporine A; MTX-methotrexate; MMF-mycophenolate mofetil; PTCY=posttransplant cyclophosphamide; TAC=Tacrolimus; M=Male; F=Female

Supplementary Table S4: post transplantation patients characteristics.

*Abbreviations: UK=unknown; CSA=cyclosporine; MTX=Methotrexate; ECP=extracorporeal photopheresis; GI=Gastrointestinal.

Supplementary Table S5: Supporting Data Values file.

Supplementary Figure legends:

Supplementary Figure S1: Tissue specific cell free (cf) DNA levels correlate with clinical tissue chronic GVHD.

Tissue-specific cfDNA in healthy volunteers and in allogeneic HCT patients in relation to clinical chronic GVHD score in skin (A), lung (B) and liver(C). Each dot represents one plasma sample.

Supplementary Figure S2: Matrix of correlations between cfDNA and clinical parameters among transplanted patients. Spearman's rank correlation coefficient is listed for each comparison.

*Abbreviations: cf=cell free DNA; cfDNAng/ml=Total cell free DNA levels in ng/ml; cGVHD=chronic Graft Versus Host Disease.

Supplementary Figure S3: Correlation matrix between cfDNA and specific organ cGVHD scoring among transplanted patients. Spearman's rank correlation coefficient and significance of correlations (*<0.05 **<0.01 ***<0.001).

*Abbreviations: cf=cell free DNA; cfDNAng/ml= Total cell free DNA levels in ng/ml; cGVHD=chronic Graft Versus Host Disease; cOrgan=clinical organ involvement with cGVHD.

Supplementary Figure S4: Correlation matrix between cfDNA and specific organ cGVHD scoring among transplanted patients. Spearman's rank correlation coefficient listed for each comparison.

*Abbreviations: cf=cell free DNA; cfDNAng/ml= Total cell free DNA levels in ng/ml; cGVHD=chronic Graft Versus Host Disease; cOrgan=clinical organ involvement with cGVHD.

Supplementary Figure S5: Liver cfDNA levels correlate with liver enzyme levels.

Liver enzyme levels: ALT, AST, ALP, GGTp- represented in units/L and TBIL levels in micromole/L. Each dot represents one plasma sample.

*Abbreviations: ALT- Alanine transaminase, AST- Aspartate transaminase; ALP- Alkaline phosphatase; GGTp- gamma glutamyl transpeptidase; TBIL- Total bilirubin.

Supplementary Figure S6: Shapley analysis of cfDNA and clinical features. Evaluation of the contribution of each feature to the model's prediction of cGVHD. The parameter space of the model was non constrained thus showing all 17 measured features. **A.** SHAP value distributions **B.** The average absolute SHAP value for each individual feature (GGTp, ALP, ALT, AST, TBil, total cfDNA level, cfSkin, cfLung, cfGI, cfLiver, cfNeutrophils, cfMonocytes, cfEosinophils, cfB cells, cfT cells, cfCD8 cells, cfTreg cells). *Abbreviations: cf=cell free; cfDNAng/ml= Total cell free DNA levels in ng/ml;

Supplementary Figure S7: Variation of Metrics based on Number of Features. Visual representation of metrics (specificity, sensitivity, AUC, NPV, PPV) based on the addition of all 17 features according to their importance as determined by SHAP analysis. (purple line=PPV, blue line=specificity, green line=ROC, orange line=sensitivity, red line=NPV).

*Abbreviations: NPV-Negative Predictive Value, PPV-Positive Predictive Value.

Supplementary Figure S8: repeated 5-fold cross validation results on the best feature set.

A. Bar plot of metrics for solely clinical laboratory features (red; ALT, GGTp, ALP), solely cfDNA features (green; cfDNAng/ml, cfMonocytes, cfEosinophils, cfNeutrophils) and combined (blue; ALT, GGTp, ALP, cfDNAng/ml, cfMonocytes, cfEosinophils, cfNeutrophils) **B.** ROC curves for solely clinical laboratory features (red; ALT, GGTp, ALP; AUC=0.68), solely cfDNA

features (green; cfDNAng/ml, cfMonocytes, cfEosinophils, cfNeutrophils; AUC=0.74) and combined (blue; ALT, GGTp, ALP, cfDNAng/ml, cfMonocytes, cfEosinophils, cfNeutrophils; AUC=0.80).

*Abbreviations: cf=cell free DNA.

Supplementary Table S3: Sample characteristics.

Variables	Number of Patients (Total=101) (%)
