nature portfolio

Corresponding author(s): Jason N. Doctor

Last updated by author(s): December 7, 2023

Reporting Summary

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our Editorial Policies and the Editorial Policy Checklist.

Please do not complete any field with "not applicable" or n/a. Refer to the help text for what text to use if an item is not relevant to your study.
For final submission: please carefully check your responses for accuracy; you will not be able to make changes later.

Statistics

For all statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.

n/a	Confirmed	
☐	☑	The exact sample size (*n*) for each experimental group/condition, given as a discrete number and unit of measurement
☑	☐	A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly
☐	☑	The statistical test(s) used AND whether they are one- or two-sided *Only common tests should be described solely by name; describe more complex techniques in the Methods section.*
☐	☑	A description of all covariates tested
☐	☑	A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons
☐	☑	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)
☐	☑	For null hypothesis testing, the test statistic (e.g. *F*, *t*, *r*) with confidence intervals, effect sizes, degrees of freedom and *P* value noted *Give P values as exact values whenever suitable.*
☑	☐	For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings
☐	☑	For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes
☑	☐	Estimates of effect sizes (e.g. Cohen's *d*, Pearson's *r*), indicating how they were calculated

Our web collection on statistics for biologists contains articles on many of the points above.

Software and code

Policy information about availability of computer code

Data collection	CURES, LA Medical Examiner-Coroner Microsoft Access, and Schaeffer Center for Health Policy and Economics, University Southern California
Data analysis	Code available from: https://github.com/epstewart111/LA-Letters-Code/tree/main (DOI: 10.5281/zenodo.10263890); Software: SAS version 9.4, STATA version 16, and R version 4.3.2.

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our policy

The datasets generated and/or analyzed during the current study involve third party data from the California Department of Justice, and are not publicly available as they contain protected health information, posing participant confidentiality and privacy concerns. Data may be available jointly through the Department of Justice and the corresponding author (JND) through a signed Data Use Agreement; please allow 30 days for a response to your request.

Research involving human participants, their data, or biological material

Policy information about studies with human participants or human data. See also policy information about sex, gender (identity/presentation), and sexual orientation and race, ethnicity and racism.

Reporting on sex and gender	We report decedent and prescriber self-reported biological sex in Table 1 and Table 2, respectively.
Reporting on race, ethnicity, or other socially relevant groupings	We report decedent and prescriber race and ethnicity in Table 1 and Table 2, respectively. We provide descriptive statistics on sex/gender, and other characteristics. We do not provide inferential statistics and were not powered to look at sex/gender, or other characteristics, as moderators. Characteristics (e.g., sex) also did not differ by study arm, and did not need adjustment post-hoc.
Population characteristics	We report cause of death for decedents in Table 1. We report prescriber practice information in Table 2.
Recruitment	Participants were included, not enrolled. (We received a USC IRB approved Waiver of informed consent). We report this in the 'Inclusion criteria' section of the methods. The study was a randomized trial with a concealment design, where participants did not know they were being observed. Therefore, we avoided common biases such as self-selection and social-desirability.
Ethics oversight	University of Southern California's Institutional Review Board (IRB).

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Field-specific reporting

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

☐ Life sciences ☑ Behavioural & social sciences ☐ Ecological, evolutionary & environmental sciences

For a reference copy of the document with all sections, see nature.com/documents/nr-reporting-summary-flat.pdf

Life sciences study design

Blinding	

Behavioural & social sciences study design

All studies must disclose on these points even when the disclosure is negative.

Study description	Clustered-randomized clinical trial (see 'Abstract' and 'Intervention' under Online Methods). The data are quantitative.
Research sample	We observed all clinicians who prescribed a scheduled II-IV drug to every decedent in Los Angeles County who died from October 2018 to May 2020. Because we observed all clinicians who prescribed a schedule II-IV to every decedent, the sample was demographically representative.
Sampling strategy	We did not sample decedents or clinicians; rather, we observed scheduled-drug prescribing behavior for all clinicians associated with every decedent in Los Angeles County from 10/18/2018 to 5/21/2020. We chose decedent dates of death in reference to project onset.
Data collection	In partnership with the Los Angeles Department of Medical Examiner-Coroner, and CURES (see 'Intervention' under Online Methods). Researchers were not blinded to the experimental condition, or study hypothesis.
Timing	Patients with a date of death from 10/18/2018 to 05/21/2020, and prescriptions which occurred from 10/1/2017 to 08/31/2021 (see 'Intervention' under Online Methods).
Data exclusions	Prescribers with unknown Drug Enforcement Agency (DEA) numbers, and those who did not have a CURES report on record (see `Inclusion and exclusion criteria' under Online Methods).
Non-participation	The exposure was involuntary, so prescribers could not drop out.
Randomization	Block randomization.

Ecological, evolutionary & environmental sciences study design

All studies must disclose on these points even when the disclosure is negative.

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

Materials & experimental systems

n/a	Involved in the study
☑	☐ Antibodies
☑	☐ Eukaryotic cell lines
☑	☐ Palaeontology and archaeology
☑	☐ Animals and other organisms
☐	☑ Clinical data
☑	☐ Dual use research of concern
☑	☐ Plants

Methods

n/a	Involved in the study
☑	☐ ChIP-seq
☑	☐ Flow cytometry
☑	☐ MRI-based neuroimaging

Antibodies

Antibodies used	
Validation	

Eukaryotic cell lines

Policy information about cell lines and Sex and Gender in Research

Cell line source(s)	
Authentication	
Mycoplasma contamination	
Commonly misidentified lines (See ICLAC register)	

Palaeontology and Archaeology

Specimen provenance	
Specimen deposition	
Dating methods	

☐ Tick this box to confirm that the raw and calibrated dates are available in the paper or in Supplementary Information.

Ethics oversight	

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Animals and other research organisms

Policy information about studies involving animals; ARRIVE guidelines recommended for reporting animal research, and Sex and Gender in Research

Laboratory animals	
Wild animals	
Reporting on sex	
Field-collected samples	
Ethics oversight	

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Clinical data

Policy information about clinical studies

All manuscripts should comply with the ICMJE guidelines for publication of clinical research and a completed CONSORT checklist must be included with all submissions.

Clinical trial registration	NCT03856593
Study protocol	Included in Supplement.
Data collection	In partnership with the Los Angeles Department of Medical Examiner-Coroner, and CURES (see 'Intervention' under Online Methods). Data collected from 10/18/17 to 8/31/21.
Outcomes	Primary: morphine (MME) and diazepam (DME) milligram equivalents. Secondary: High-dose 50 MME and 90 MME Rxs. Outcomes predefined on clincialtrials.gov, and analyzed using mixed-effects, censored linear regression and mixed-effects logistic regression.

Dual use research of concern

Policy information about dual use research of concern

Hazards

Could the accidental, deliberate or reckless misuse of agents or technologies generated in the work, or the application of information presented in the manuscript, pose a threat to:

No	Yes	
☐	☐	Public health
☐	☐	National security
☐	☐	Crops and/or livestock
☐	☐	Ecosystems
☐	☐	Any other significant area

Experiments of concern

Does the work involve any of these experiments of concern:

No	Yes	
☐	☐	Demonstrate how to render a vaccine ineffective
☐	☐	Confer resistance to therapeutically useful antibiotics or antiviral agents
☐	☐	Enhance the virulence of a pathogen or render a nonpathogen virulent
☐	☐	Increase transmissibility of a pathogen
☐	☐	Alter the host range of a pathogen
☐	☐	Enable evasion of diagnostic/detection modalities
☐	☐	Enable the weaponization of a biological agent or toxin
☐	☐	Any other potentially harmful combination of experiments and agents

Plants

Seed stocks

Novel plant genotypes

Authentication

ChIP-seq

Data deposition

☐ Confirm that both raw and final processed data have been deposited in a public database such as GEO.

☐ Confirm that you have deposited or provided access to graph files (e.g. BED files) for the called peaks.

Data access links
May remain private before publication.

Files in database submission

Genome browser session
(e.g. UCSC)

Methodology

Replicates

Sequencing depth

Peak calling parameters

Data quality

Software

Flow Cytometry

Plots

Confirm that:

☐ The axis labels state the marker and fluorochrome used (e.g. CD4-FITC).

☐ The axis scales are clearly visible. Include numbers along axes only for bottom left plot of group (a 'group' is an analysis of identical markers).

☐ All plots are contour plots with outliers or pseudocolor plots.

☐ A numerical value for number of cells or percentage (with statistics) is provided.

Methodology

Sample preparation

Instrument

Software

Cell population abundance

Gating strategy

☐ Tick this box to confirm that a figure exemplifying the gating strategy is provided in the Supplementary Information.
