

Supplementary data - Agtrevirus phage AV101 infect diverse extended spectrum β-lactamase E. coli by recognizing four different O-antigens

Supplementary data

Table S1: A list of all phage genomes used for in-silico analysis and their identity to phage AV101.

Genus*	Phages	Query cover	Percent identity	Accession
Unclassified Aglimvirinae	Enterobacter phage fGh-Ecl02	87%	97.54%	ON212266.1
	Escherichia phage PH4	85%	97.83%	ON184126.1
	Escherichia phage PC3	85%	97.83%	ON184125.1
	Escherichia phage vB_EcoM-RPN242	88%	97.74%	OL656110.1
	Escherichia phage vB_EcoM-ZQ1	85%	97.57%	MW650886.1
Agtrevirus	Shigella phage phiSboM-AG3	85%	92.25%	NC_013693.1
	Salmonella phage P46FS4	85%	92.08%	NC_049509.1
	Salmonella phage SKML-39	85%	91.76%	JX181829.1
	Shigella phage vB_SboS_Gloob	85%	92%	OL615011.1
	Shigella phage vB_SboM_ChubbyThor	85%	93.03%	OL615013.1
	Shigella phage MK-13	84%	91.94%	NC_049455.1
	Enterobacter phage EspM4VN	83%	90.23%	NC_049384.1
	Salmonella phage pSal-SNUABM-02	82%	90.52%	MT857002.1

Supplementary data - Agtreirus phage AV101 infect diverse extended spectrum β -lactamase E. coli by recognizing four different O-antigens

Table S2: overview of genes marked in Figure 1. The genes that are highlighted in Figure 1 are listed below in the order seen in the figure (right to left).

Phage SNUAMB-02	Gene product	Function	Position	Colour on Fig 1
	105	hypothetical protein	2620..3789	Blue
	106	Putative tail spike protein	3842..6877	Blue
	107	Putative tail spike protein	6930..9353	Blue
	128	hypothetical protein	29730..31052	Orange
	202	putative ribonucleoside-diphosphate reductase subunit alpha	79811..80470	Red
	203	putative ribonucleotide-diphosphate reductase subunit beta	80638..82812	Red
	5	Putative thymidylate synthase	97785..98357	Red
	6	putative dNMP kinase	98374..99423	Red
	7	putative dCTP pyrophosphatase	99423..99989	Red
	84	putative homing endonuclease	144086..144283	Orange
Phage EspM4VN	Gene product	Function	Position	Colour on Fig. 1
	213	hypothetical protein	2620..3831	Blue
	214	hypothetical protein	3884..7213	Blue
	215	hypothetical protein	7259..9055	Blue
	216	hypothetical protein	9110..11674	Blue
	165	ribose-phosphate pyrophosphokinase	50312..51106	Green
	164	nicotinamide phosphoribosyltransferase	51217..52071	Green
	119	ribonucleoside-diphosphate reductase	80789..81631	Red
	118	NrdB ribonucleotide reductase subunit beta	81717..83996	Red
	97	part of thymidylate synthase	97641..98027	Red
	96	part of thymidylate synthase	98268..98534	Red
	95	part of thymidylate synthase	98492..98833	Red
	94	hypothetical protein	98817..98978	Red
	1	putative dUTP diphosphatase	99231..99611	Red

Figure S1: Average Nucleotide Identity of the 14 Agtreirus genomes. All 14 phages were compared and showed that they all belong to the Agtreirus genus.

Figure S2

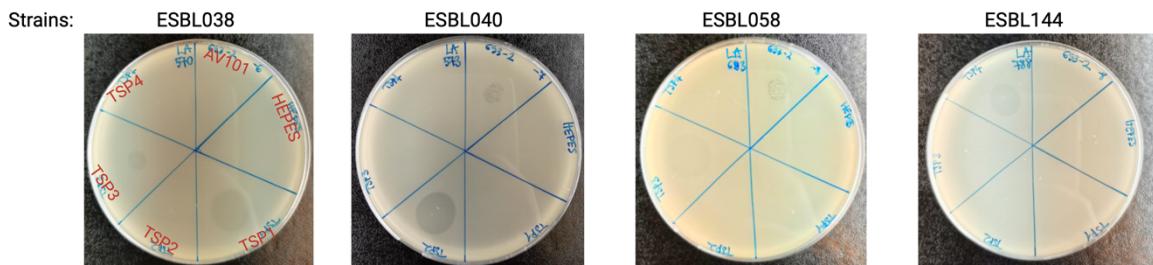

Figure S2: Each TSPs of AV101 show enzymatic activity towards different AV101 hosts. Each purified TSPs were spotted on the known AV101 phage hosts to investigate their enzymatic activity towards the O-antigen chain. The protein buffer (HEPES) was added as a negative control.

Figure S3

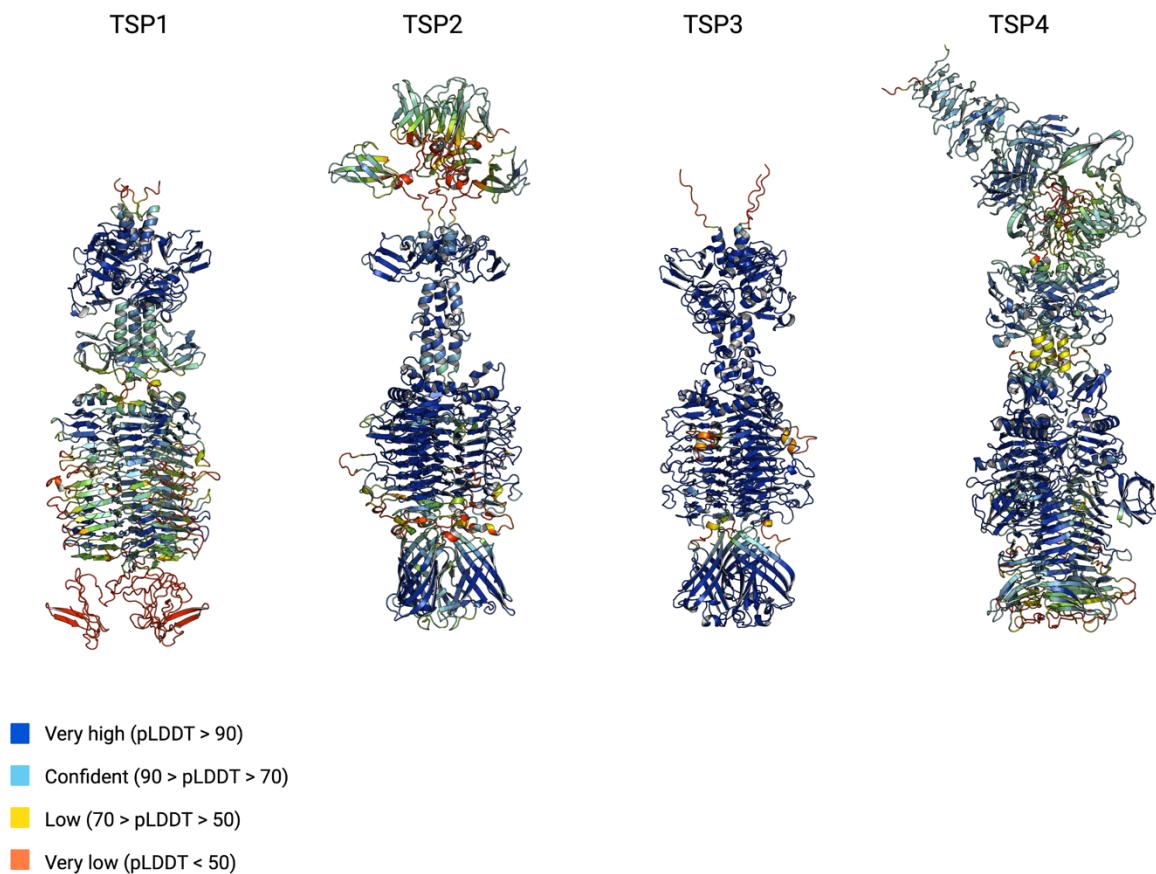

Figure S3: AlphaFold2 prediction of the four AV101 TSPs. The structures of the TSPs of AV101 have similar fold as other known TSPs. The structures are coloured after the β -score. The beta-helices, hence the receptor binding domain of the TSPs had a higher prediction score compared to the head-binding domains.

Supplementary data - Agtrevirus phage AV101 infect diverse extended spectrum β -lactamase E. coli by recognizing four different O-antigens

Figure S4

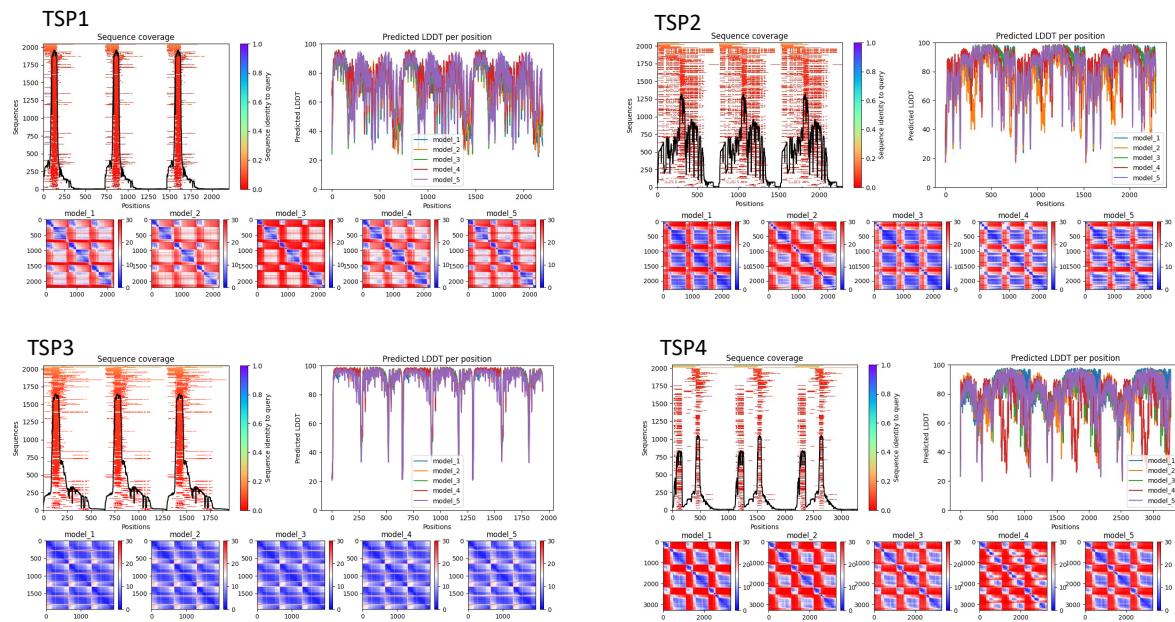

Figure S4: Prediction quality metrics plots from AlphaFold2 for the four TSPs. The top-left graph represents the MSA coverage for each of the sequences. In the top-right is the pLDDT per position plot for the five final models for each TSP1. In the bottom is the Predicted Aligned Error matrix for the five final models for the four TSP1.
