

## Supplementary Figure 1.

Between-group variation analysis of bacteria taxa at the phylum level in the oral (**A**), gut (**B**) and liver (**C**). The data in the bar graphs are shown as means  $\pm$  standard deviation. \* $p < 0.05$  between groups with Tukey test ( $n=6$ ).

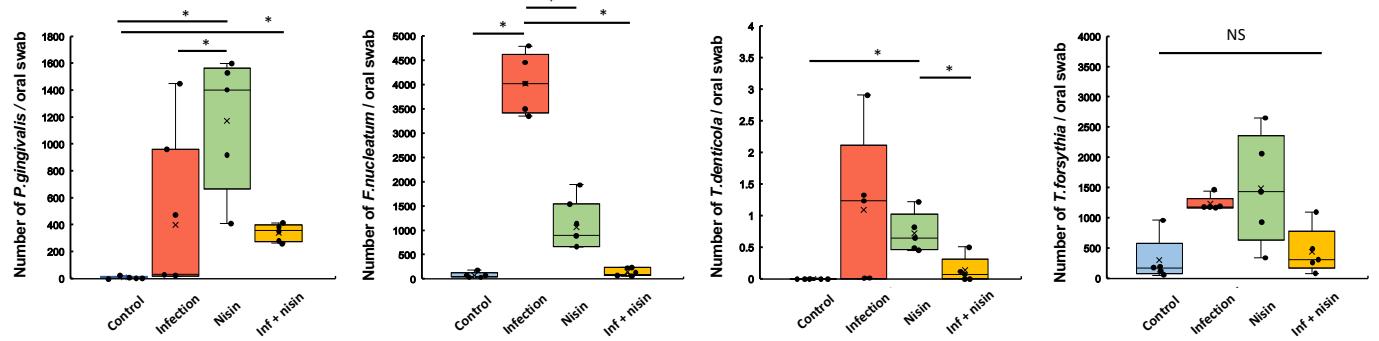

**Supplementary Figure 2.** Between-group variation analysis of bacteria taxa at the genus level in the oral (**A**), gut (**B**) and liver (**C**). The data in the bar graphs are shown as means  $\pm$  standard deviation. \* $p < 0.05$  between groups with Tukey test ( $n=6$ ).

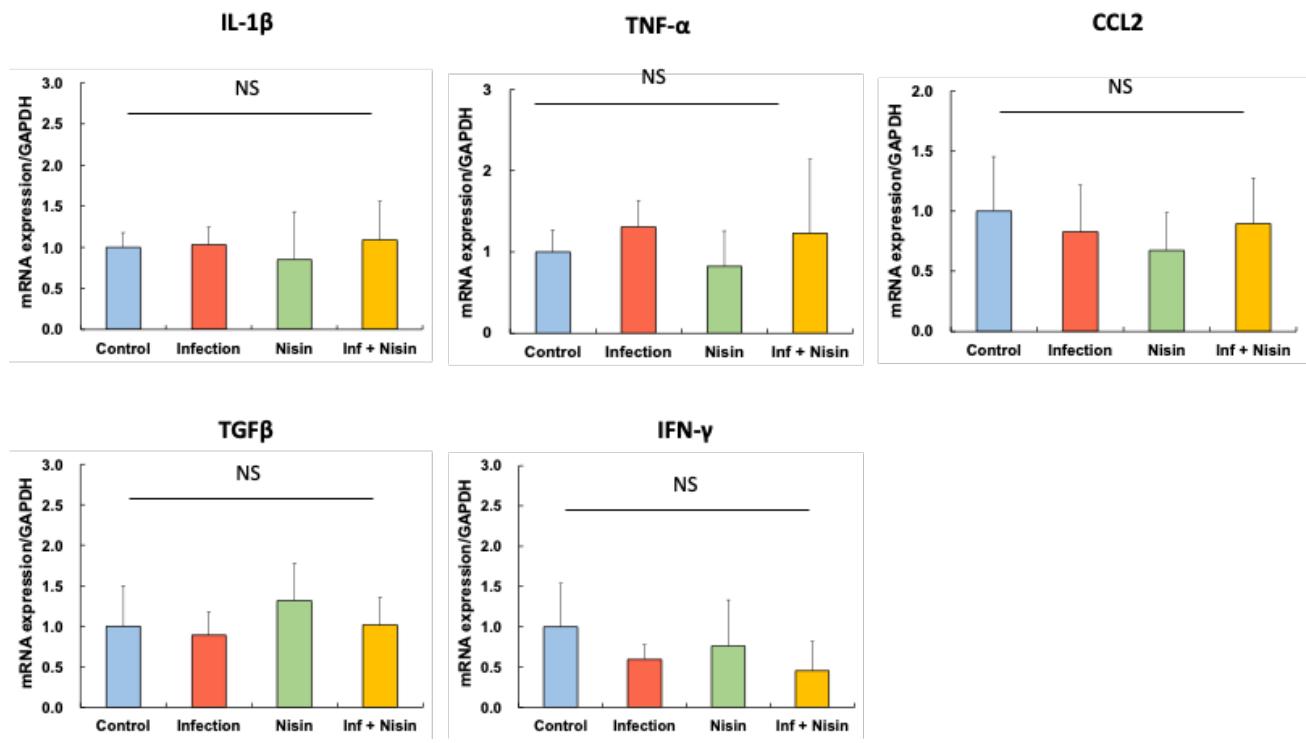

## Supplementary Figure 3.

Rarefaction curves of each sample (**A, C, and E**) and group(**B, D, and F**) in the oral cavity, small intestine, and liver (n=6).

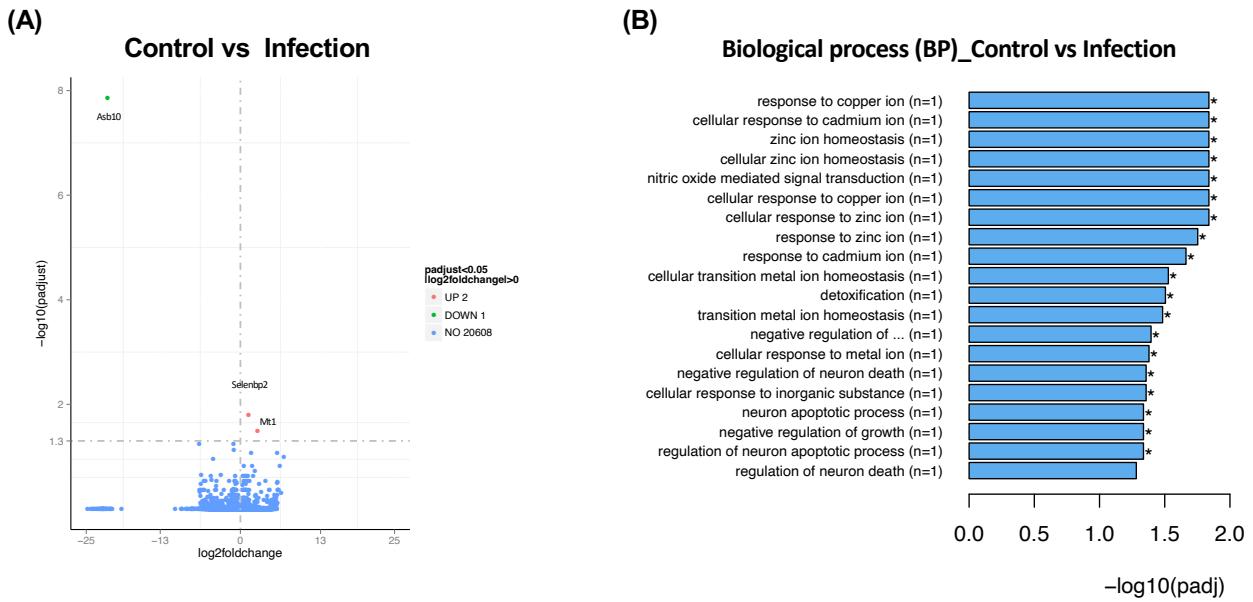

#### Supplementary Figure 4.

The number of periodontal pathogens in oral cavity following polymicrobial infection and nisin treatment. Box-plots display the median, first quartiles (25th percentile), third quartiles (75th percentile), and minimum and maximum whiskers, with all data points plotted. \* $p < 0.05$  between groups with Tukey test ( $n=5$ ).

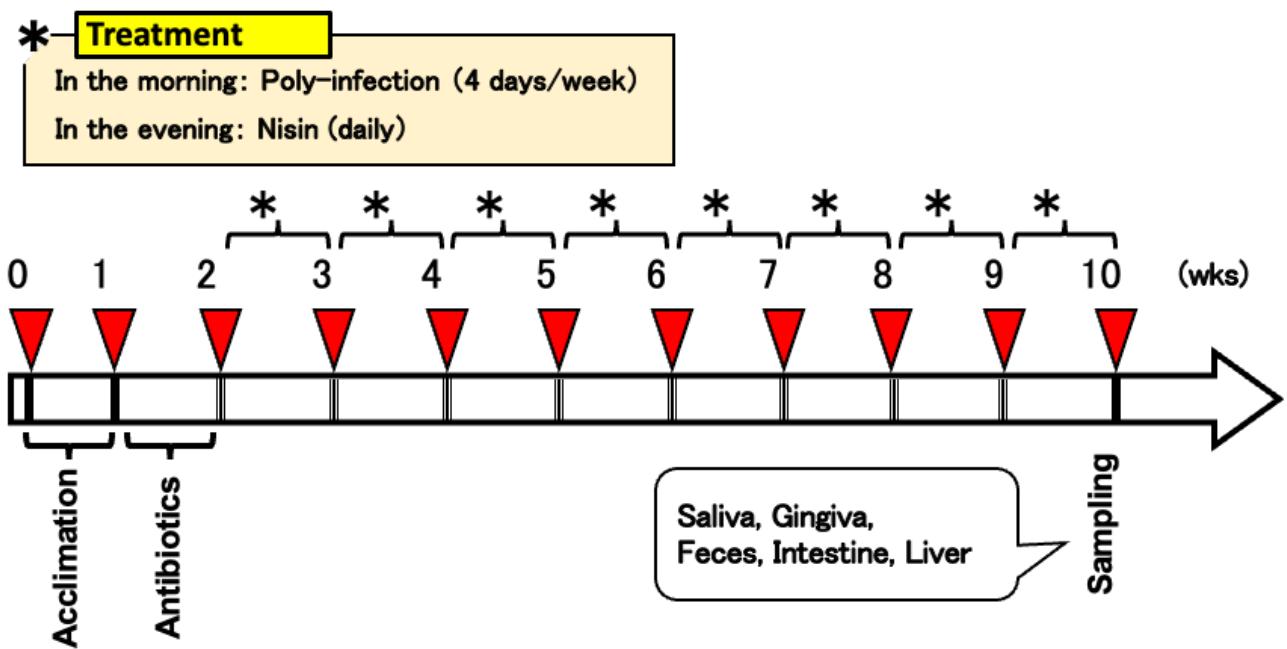

### Supplementary Figure 5.

Gene Expression of Pro-inflammatory Cytokine in Periodontal Tissue.  
The data in the bar graphs are shown as means  $\pm$  standard deviation.

### Supplementary Figure 6.

Gene profile in liver tissue analyzed by RNA sequencing (n=6). **A**) Volcano plot revealed 3 DEGs (2 up-regulated and 1 down-regulated) between the control group and the infection group. **B**) Bar plot shows function of expressed genes for top 20 significantly enriched GO terms at biological process category, which were determined by ClusterProfiler (version 3.8.1).

**Supplementary Figure 7.** Experimental design using polymicrobial infection animal model

**Supplementary Table 1. Microbial genera identified via 16S sequencing in the oral cavity, small intestine and liver; ranked by their relative abundance (from highest at the top to lowest at the bottom).**

| Oral  | Small intestine                         | Liver                                   |
|---|---|---|
