

Suppl. Figure 1

Supplemental Figure 1. Comparison of GLP-1/PG ratios and GLP-1/Ins ratios in post-GDM and non-GDM women for the comparison of overweight/obesity and normal weight states during 75 g OGTT.

Women with previous GDM (A, C) and controls (B, D) were compared between overweight/obesity (BMI ≥ 25 kg/m²) and normal weight (BMI <25 kg/m²) states.

Data are shown as mean \pm SEM during OGTT at baseline visit.

* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, calculated by Mann-Whitney U Test
