## 31 Supplementary Figure 1:

32

a The UMAP plot is separated by patient samples, with colors indicate different clusters.
b The UMAP plot color coded for the expression of marker genes for major cell type.

**Supplementary Figure 2:** 

36

a The curve chart shows the stability and error of different quantity of gene module. b The UMAP plot shows different stages of the epithelial cell by color. c The UMAP plot shows different tissues of the epithelial cell by color. d Stacked bar graph of the proportion of epithelial cell cluster in each stage and the proportion of stage and tissue in each epithelial cell sub cluster. e Heat map show the GSVA scores of cancer-related function gene sets for each gene module. f Heat map show the GO enrichment terms of the top 200 contribution genes of each gene module. g The UMAP plot shows CNV

- 45 score of the epithelial cell by color. h Clustering analysis based on similar temporal46 patterns of high variation genes in epithelial cells.

49 Supplementary Figure 3:

a The donut diagram shows the different tissue, stage, source, patient sample
composition of the T cell. b The box plot shows change of Treg differentiation score in
T cell with stage (Total 35,499 single cells). c The box plot shows change of exhaustion

differentiation score in T cell with stage (Total 35,499 single cells). \*, P < 0.05; \*\*, P < 0.01; \*\*\*, P < 0.001, \*\*\*\*, P < 0.0001. **d** Clustering analysis based on similar temporal patterns of high variation genes in T cells. **e** The radar map shows changes in the proportion of T cell subtypes in ovarium, omentum, peritoneum versus normal tissue. The red dashed box indicates increase from stage IC1 to stage IC2, and the blue dashed box indicates a decrease.

60

a Stacked bar graph of the proportion of fibroblast subtypes in each tissue. b Stacked
bar graph of the proportion of fibroblast subtypes in each stage.

## 67

## 68 Supplementary Figure 5:

a sgRNA targeting exon 2 of the *NECTIN2* gene and primers sites. b EGFP mRNA
transduction efficiency in SKOV3 cells. c Cell morphology of SKOV3 and *NECTIN2*knock-out SKOV3 cells. d Gel images of PCR amplicons for wildtype and *NECTIN2*knock out target regions. e Sequences and ICE analysis for *NECTIN2* mutation in
SKOV3 cells.
