

Medical Sciences. In the article "DNA repair and aging in basal cell carcinoma: A molecular epidemiology" by Qingyi Wei, Genevieve Matanoski, Evan Farmer, Mohammad Hedayati, and Lawrence Grossman, which appeared in number 4, February 15, 1993, of *Proc. Natl. Acad. Sci. USA* (90, 1614–1618), the authors request that the following correction be noted. In Table 2 the correlation coefficient (0.025) and *P* value (0.710) for the correlation between blastogenic rate and CAT₇₀₀ were misplaced on the third line of the third column. Instead these two figures should be on the third line of the fourth column, as in the correct Table 2 below.

Table 2. Correlations between age, lymphocyte blastogenic rate, and CAT activity of undamaged and damaged plasmid (*n* = 223)

| | Pearson correlation coefficient/ <i>P</i> value | | |
|---------------------------|-------------------------------------------------|------------------------|-------------------------|
| | CAT ₀ (counts) | CAT ₇₀₀ (%) | Blastogenic rate (%) |
| Age (in yrs) | -0.091/0.174 | -0.256/0.000 | -0.058/0.387 |
| CAT ₀ (counts) | | 0.014/0.836 | 0.096/0.153 |
| CAT ₇₀₀ (%) | | | 0.025/0.710 |

Neurobiology. In the article "*In vivo* expression of inducible nitric oxide synthase in experimentally induced neurologic diseases" by Hilary Koprowski, Yong Mu Zheng, Ellen Heber-Katz, Nigel Fraser, Lucy Rorke, Zhen Fang Fu, Cathleen Hanlon, and Bernhard Dietzschold, which appeared in number 7, April 1, 1993, of *Proc. Natl. Acad. Sci. USA* (90, 3024–3027), the authors request the following corrections be noted. On p. 3024, right column, the sentence in lines 6–8 from the bottom should read: At the onset of neurological signs 9–14 days p.i., animals were euthanized and brains were collected. On p. 3025, Table 1, the number of animals (mice) with rabies in column 3 should be 6 and, in the same line, the number of animals showing histological changes in column 6 should be 6. On p. 3026, left column, the sentence in lines 9–11 should read: Of six mice infected with a street virus isolate, all were paralyzed by 10–20 days p.i. On p. 3026, left column, the sentence in lines 14–16 should read: Interestingly, despite the severity of the clinical symptoms, iNOS message could only be detected in three of the six animals (Table 1 and Fig. 3).
