

S10 Fig. Metabolic activity profile within Δssg biofilm. (A) Schematic illustration of the experimental setup for growing *P. aeruginosa* biofilms on agar plates and their subsequent transfer to a medium containing 50% D₂O. (B) SRS micrographs of WT and Δssg biofilm thin-sections. Scale bar is 25 μm and applies to both images. The data underlying this figure can be found in S1_raw_data.
