Supplemental Figure S1: Analysis of the prognostic significance of different TB cutpoints (1, ..., 27 budding foci). For both, OS **(A)** and PFI **(B)** the most significant difference in survival was achieved by separating tumors with ≥ 6 budding foci from tumors with < 6 budding foci (10 HPF approach).

Supplemental Figure S2: Association of progression-free interval (PFI) with cellular dissociation grading (CDG). Performance of the 3-tiered CDG system and of the 2-tiered CDG system in the study cohort (A/B), in the subcohort of HPV-negative tumors (C/D) and in the subcohort of HPV-positive tumors (E/F).
