

## Supplementary Figure 25

### **Supplementary Figure S25. Removal of mutant TP53 does not impair the in vivo tumor growth upon transplantation of human colon cancer derived organoids into NSG mice**

Growth of the human colon cancer derived organoids WCB123LU and WCB139T, either control cancer cells expressing mutant TP53 or their mutant TP53 deleted derivatives, in NSG mice (N=6 mice per cell line) with tumor volume presented in mm<sup>3</sup>. Data are presented as mean $\pm$ SEM of 6 independent mice for each type of cancer cell.
