

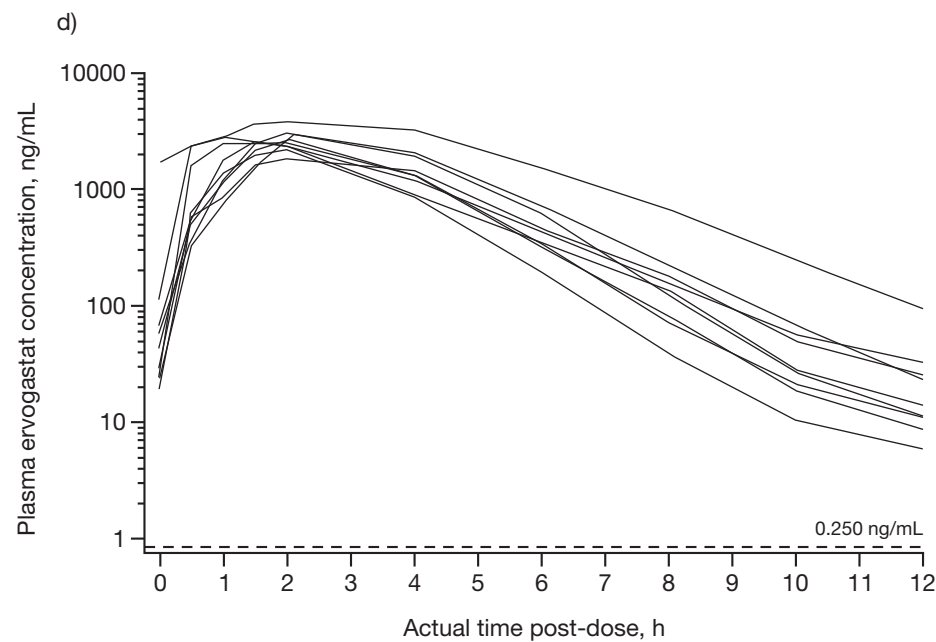

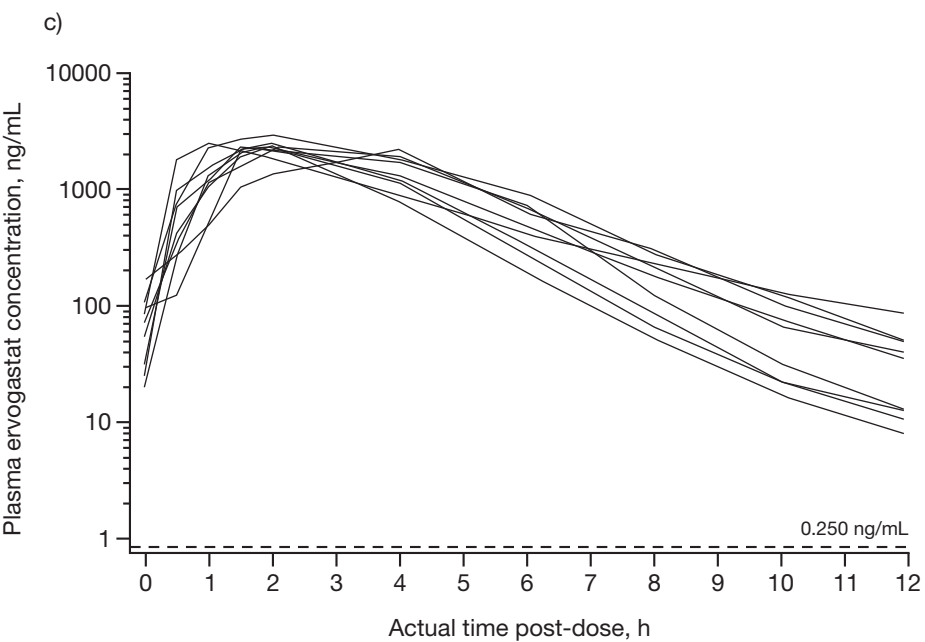

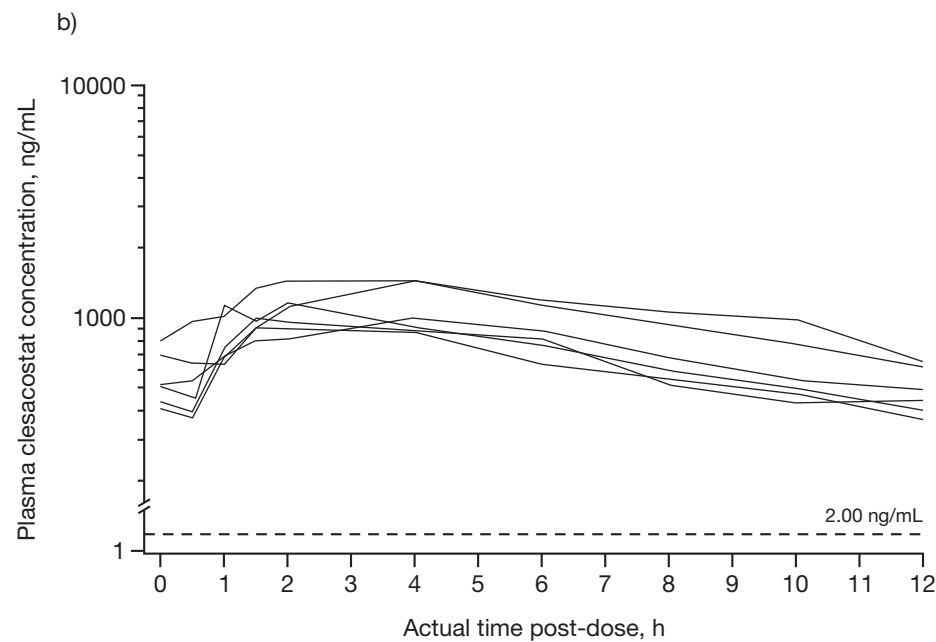

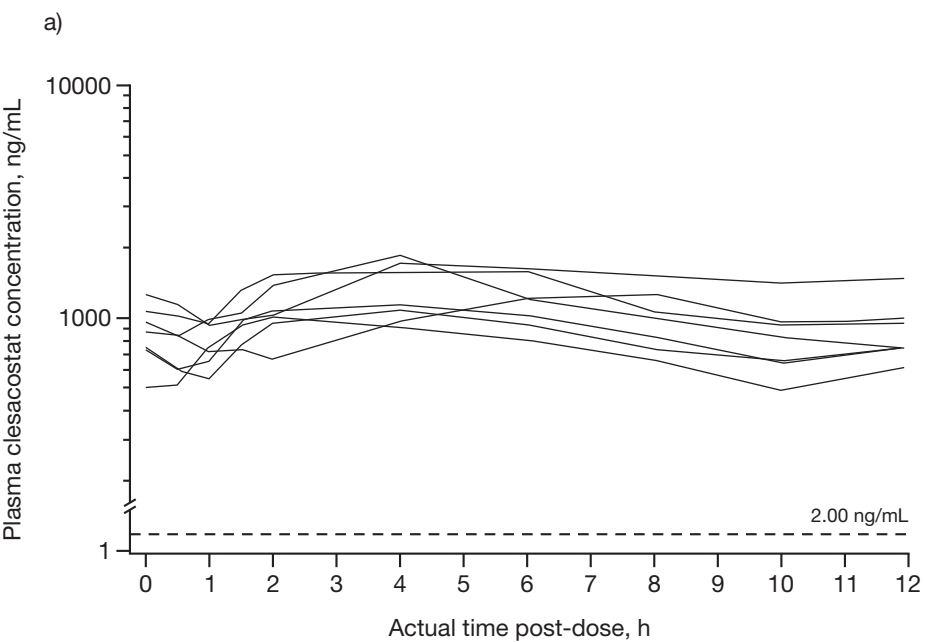

Figure S1 Concentration–time profiles by participant for Cohort 1 on (a) day 7 and (b) day 14 and Cohort 2 on (c) day 7 and (d) day 14

Dashed lines represent LLOQ for plasma clesacostat and ervogastat concentrations. The LLOQ for plasma clesacostat concentrations was 2.00 ng/mL; the LLOQ for plasma ervogastat concentrations was 0.250 ng/mL.

LLOQ, lower limit of quantification; h, hour
