

Table S7. Classification of LV diastolic dysfunction according to Project Baseline Health Study criteria and American Society of Echocardiography recommendations on diastolic dysfunction.

LVDF (ASE)	LVDF (PBHS)			
	Normal (n=1450)	Isolated E/e' (n=78)	DD grade I (n=233)	DD grade II (n=321)
Normal (n=1683)	1305 (90.0%)	64 (82.1%)	172 (73.8%)	142 (44.2%)
Indeterminate (n=147)	60 (4.1%)	10 (12.8%)	16 (6.9%)	61 (19.0%)
DD grade I (n=193)	76 (5.2%)	3 (3.8%)	44 (18.9%)	70 (21.8%)
DD grade II/III (=59)	9 (0.62%)	1 (1.3%)	1 (0.43%)	48 (15.0%)

Percentages are relative to each PBHS subcategory. ASE, American Society of Echocardiography; DD, diastolic dysfunction; LVDF, left ventricular diastolic function; PBHS, Project Baseline Health Study.
