

Figure 3: Gel electrophoresis of sucrose gradient fractions isolated from WT and *lhcb5* mutant thylakoids. Thylakoids were isolated from WT and *lhcb5* plants and solubilized with α -DM (see Methods); Lhcb proteins were obtained by sucrose gradient ultracentrifugation. Protein composition of each sample is indicated. After the electrophoretic run, gel was stained with Coomassie blue. Figure abbreviations: MW, molecular weight marker.
