

**Extended Data Figure 4. Oligoclonal TCR CDR3 $\alpha\beta$  clonotypes were identified in CD8<sup>+</sup> Tconv populations in blister fluids from all SJS/TEN patients.** Circos plots show comparative clonality and CDR3 $\alpha$  and CDR3 $\beta$  pairings between samples. The width of each segment is proportionate to its expression. Least to most dominant is colored green to red. Up to the top 50 clonotypes are shown for each sample. Patient 3 is excluded from the panel as already depicted in Figure 2. Tconv, T conventional cell; TCR, T-cell receptor; CDR, complimentary-determining region.
