Extended Data Figure 5. Top expanded TCR $\alpha\beta$ clonotypes in CD8 Tconv in affected skin and blister fluid have shared expression on dual TCR $\alpha\beta$ + T-cells. (i) Expression of each of the top 3 dominantly-expanded TCR on CD8 Tconv cells in blister fluid from a patient with SJS/TEN. Cells expressing each clonotype are circled in black. (ii) The TCR clonotypes and counts expressed by cells selected for expression of each top clonotype individually in SJS/TEN blister fluid. (iii) The TCR clonotypes and counts expressed by cells selected for expression of each top clonotype individually in SJS/TEN affected skin. Grey highlight indicates TCR expressed by the same cells. Ct., cell count. Tconv, T conventional cell; TCR, T-cell receptor; CDR, complimentary-determining region; Ct., Count.
