Molecular Biology of the Cell

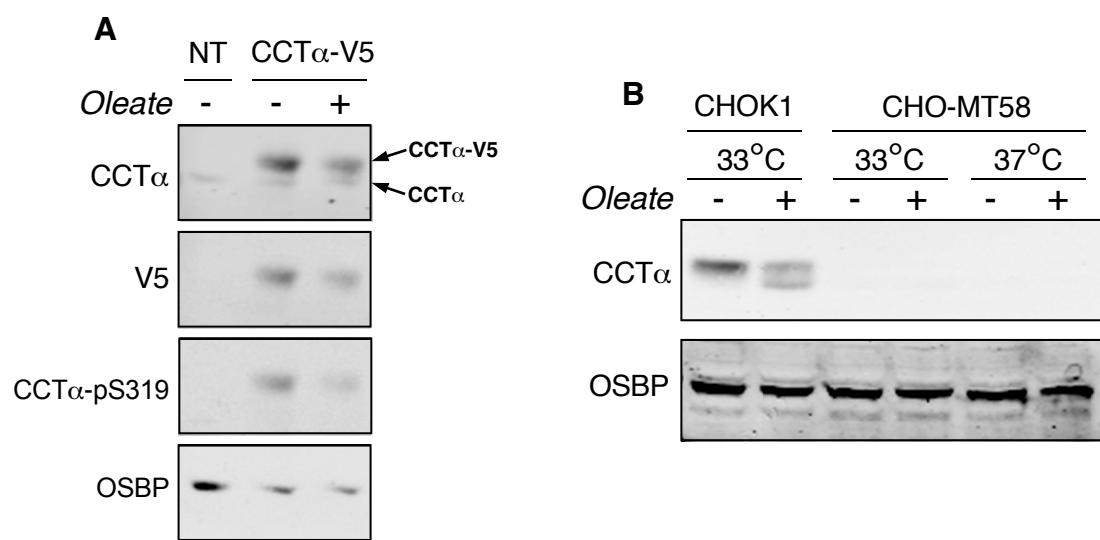

Foster *et al.*

Supplemental Figure 1

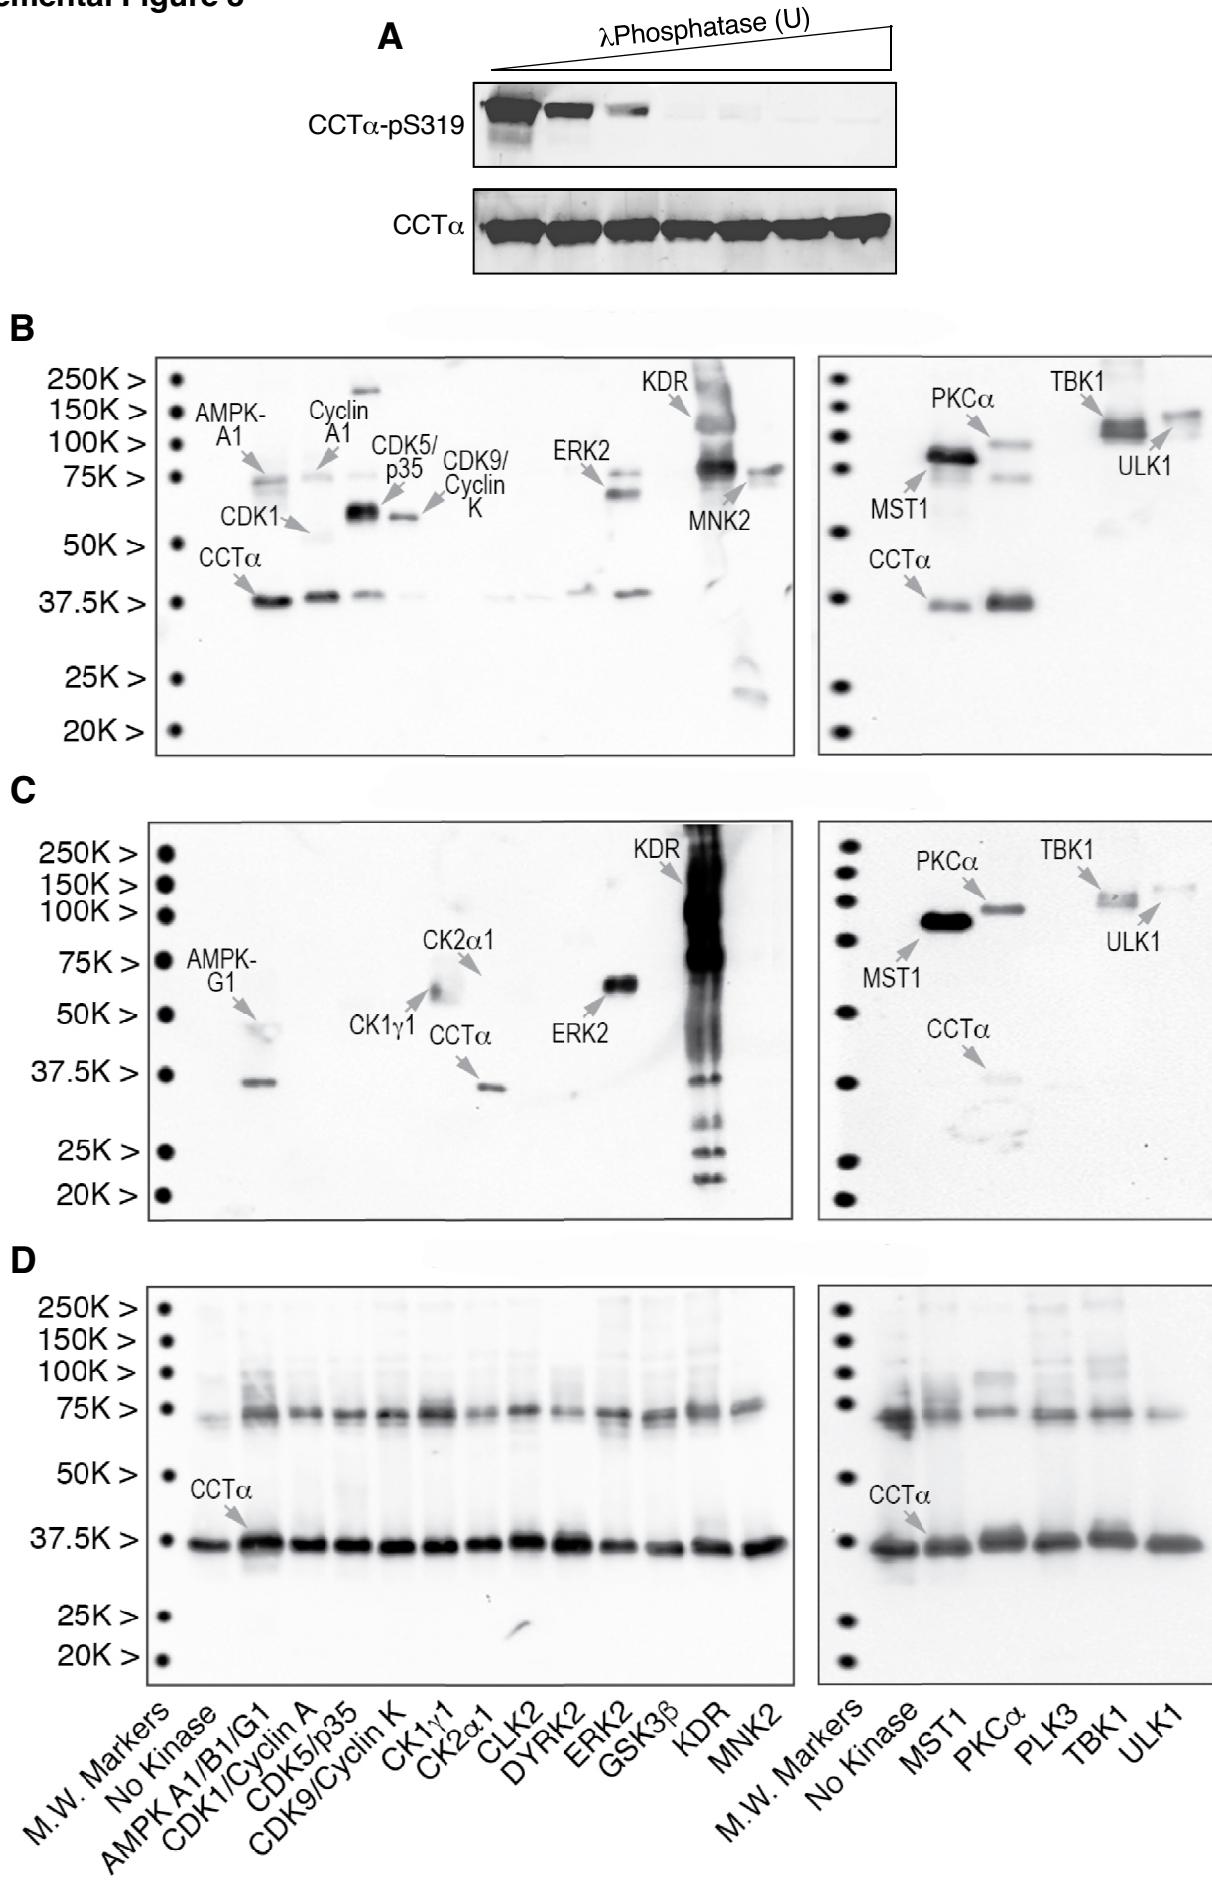

Supplemental Figure 1. Lipin1 α and 1 β do not localize to palmitate-induced nLDs or LAPS. Huh7 cells transiently expressing V5-tagged Lipin1 α (panel A) or Lipin1 β (panel B) were immunostained V5 and PML. LDs were visualized with BODIPY493/503 (bar, 10 μ m).

Supplementary Figure 2

Supplemental Figure 2. **CCT α expression in U2OS and MT58 cells.** A, Immunoblot of non-transfected (NT) and U2OS cells expressing CCT-V5 treated with or without oleate for 24 h. B, expression of endogenous CCT α in MT58 cells cultured with and without oleate at the permissive (33°C) and non-permissive (37°C) temperature.

Supplemental Figure 3

Supplemental Figure 3. Immunoblot of CCT α phosphorylation by candidate kinases. A, recombinant rat CCT α (20 μ g) was incubated with 0-400U of λ phosphatase for 1 hour at 30°C followed by immunoblotting for pS319 and CCT α protein. B, C and D complete immunoblots from Figure 10A that were probed with antibodies against pS319 (panel B), pY359/pS362 (panel C) and CCT α (panel D) showing the presence of other phosphorylated kinases and activator proteins used in the *in vitro* screen.
