The Mann-Whitney U test was used for continuous variables and the chi-square test or Fisher's exact test was used for categorical variables, when appropriate. Normal hemoglobin ranges for [†]males and [‡]females. [#]D-dimers normal range for age 50 years or younger, with an incremental increase of 0.1 for each year above 50.

Abbreviations: SD, standard deviation. IQR, interquartile range. BMI, body mass index. MPA, microscopic polyangiitis. GPA, granulomatosis with polyangiitis. EGPA, eosinophilic granulomatosis with polyangiitis. ANCA, anti-neutrophil cytoplasmic antibody. MPO, myeloperoxidase. PR3, proteinase 3. BVAS, Birmingham vasculitis activity score. ENT, ear, nose and throat. RTX, rituximab. CYC, cyclophosphamide. CRP, C-reactive protein. IgG, immunoglobulin G. PT, Prothrombin time. aPTT, activated partial thromboplastin time. FVIIa, activated FVII. AT, antithrombin. FXIIa, activated factor XII. C1Inh, C1 esterase inhibitor. FXIa, activated factor XI. α1AT, α1-antitrypsin. FIXa, activated factor IX. FXa, activated factor X. T:AT, thrombin in complex with antithrombin.

Spearman rank correlation coefficients were used. Blue color indicates a positive correlation and red color indicates a negative correlation.

Abbreviation: AAV type, either microscopic polyangiitis or granulomatosis with polyangiitis. ANCA type, either myeloperoxidase or proteinase 3. BVAS, Birmingham vasculitis activity score. PT, Prothrombin time. aPTT, activated partial thromboplastin time. CRP, C-reactive protein. IgG, immunoglobulin G.

Table 3. Logistic regression was performed to ascertain the effects of routine clinical and coagulation parameters at baseline on the likelihood of developing a VTE in patients with AAV.
