15 (A) The CBX2 mRNA level in CRC cell lines. (B) The CBX2 protein level in CRC cell lines. (C) WB of
16 indicated proteins in CBX2 overexpression and control group. (D, E) MTT and wound healing assay are

17 performed to assess cellular proliferation and migration in CBX2 overexpression and control group.

19
20 (A) Flow cytometry analysis is used to detect the apoptosis in HCT116 and HT29 cells with or without
21 CBX2 KO. (B) Co-IP is used to analyze the interaction of Mettl3 and CBX2. (C) qPCR is used to confirm the
22 mRNA level of CBX2 and METTL3. Data are shown as mean \pm SD; * $P < 0.05$.
