

## Supplemental Online Content

Davis SM, Teerlink C, Lynch JA, et al. Prevalence, morbidity, and mortality of men with sex chromosome aneuploidy in the Million Veteran Program cohort. *JAMA Netw Open*. 2024;7(3):e244113. doi:10.1001/jamanetworkopen.2024.4113

**eFigure 1.** Scatterplot of Sex Chromosome Array Intensity

**eFigure 2.** Self-Reported Medical History in Males with 47,XXY Stratified by Clinical Ascertainment Status

**eTable 1.** Standardized Mortality Ratio by Cause of Death for Males with 47,XXY, 47,XYY, and Either Sex Chromosome Aneuploidy Compared With Matched 46,XY Controls

**eTable 2.** Military Service, Morbidity, and Participant Reported Outcome Measures in Males With 47,XXY Stratified by Clinical Diagnosis Status

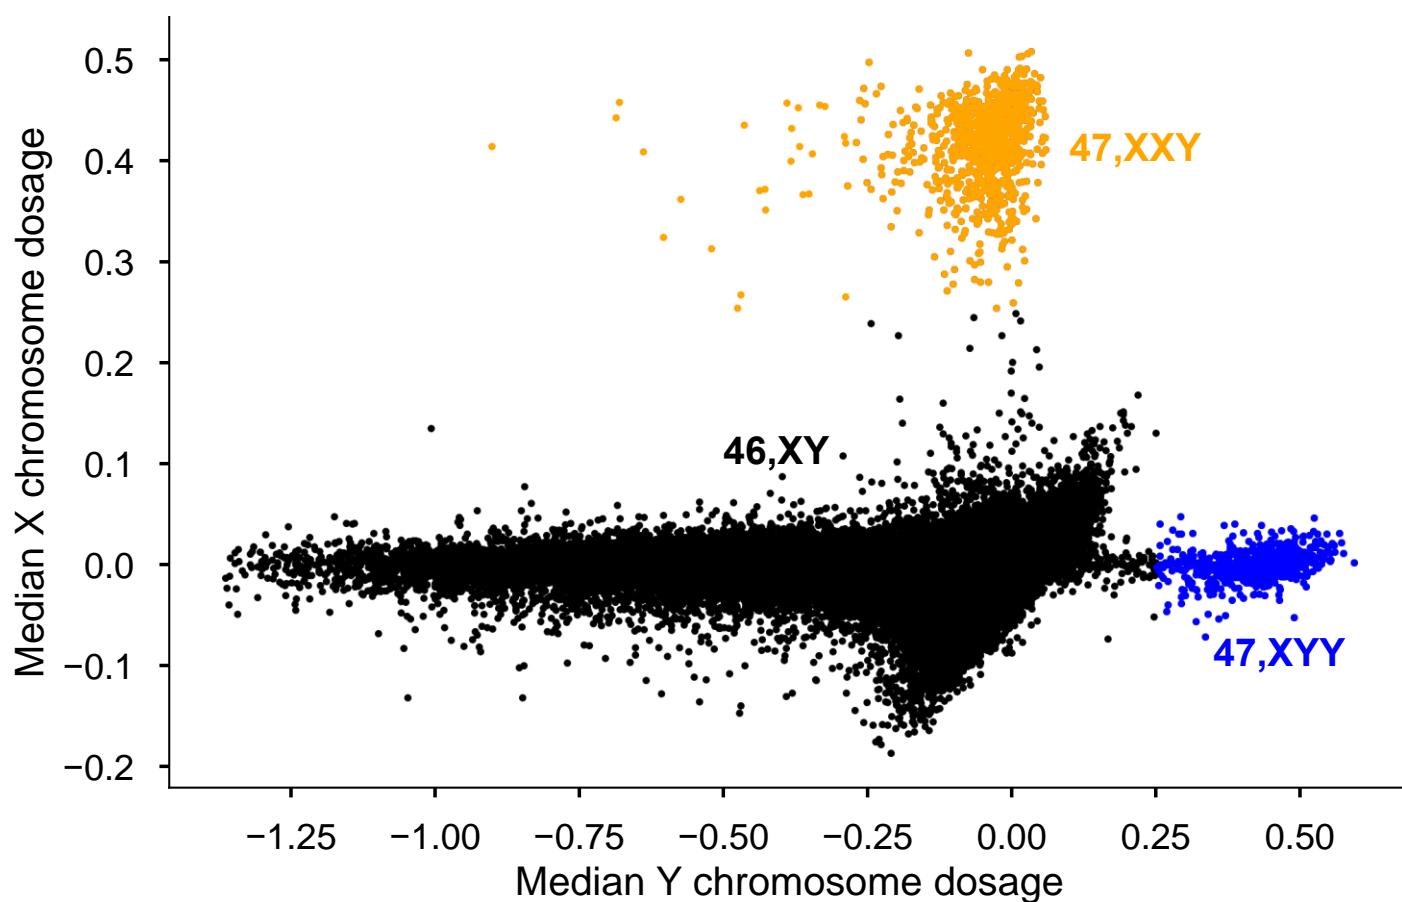

**eTable 3.** Self-Reported Medical History in Males With Either Sex Chromosome Aneuploidy Compared to Matched 46,XY Controls

**eTable 4.** Self-Reported Medical History in Males With 47,XXY Compared With Matched 46,XY Controls

**eTable 5.** Self-Reported Medical History in Males With 47,XYY Compared With Matched 46,XY Controls

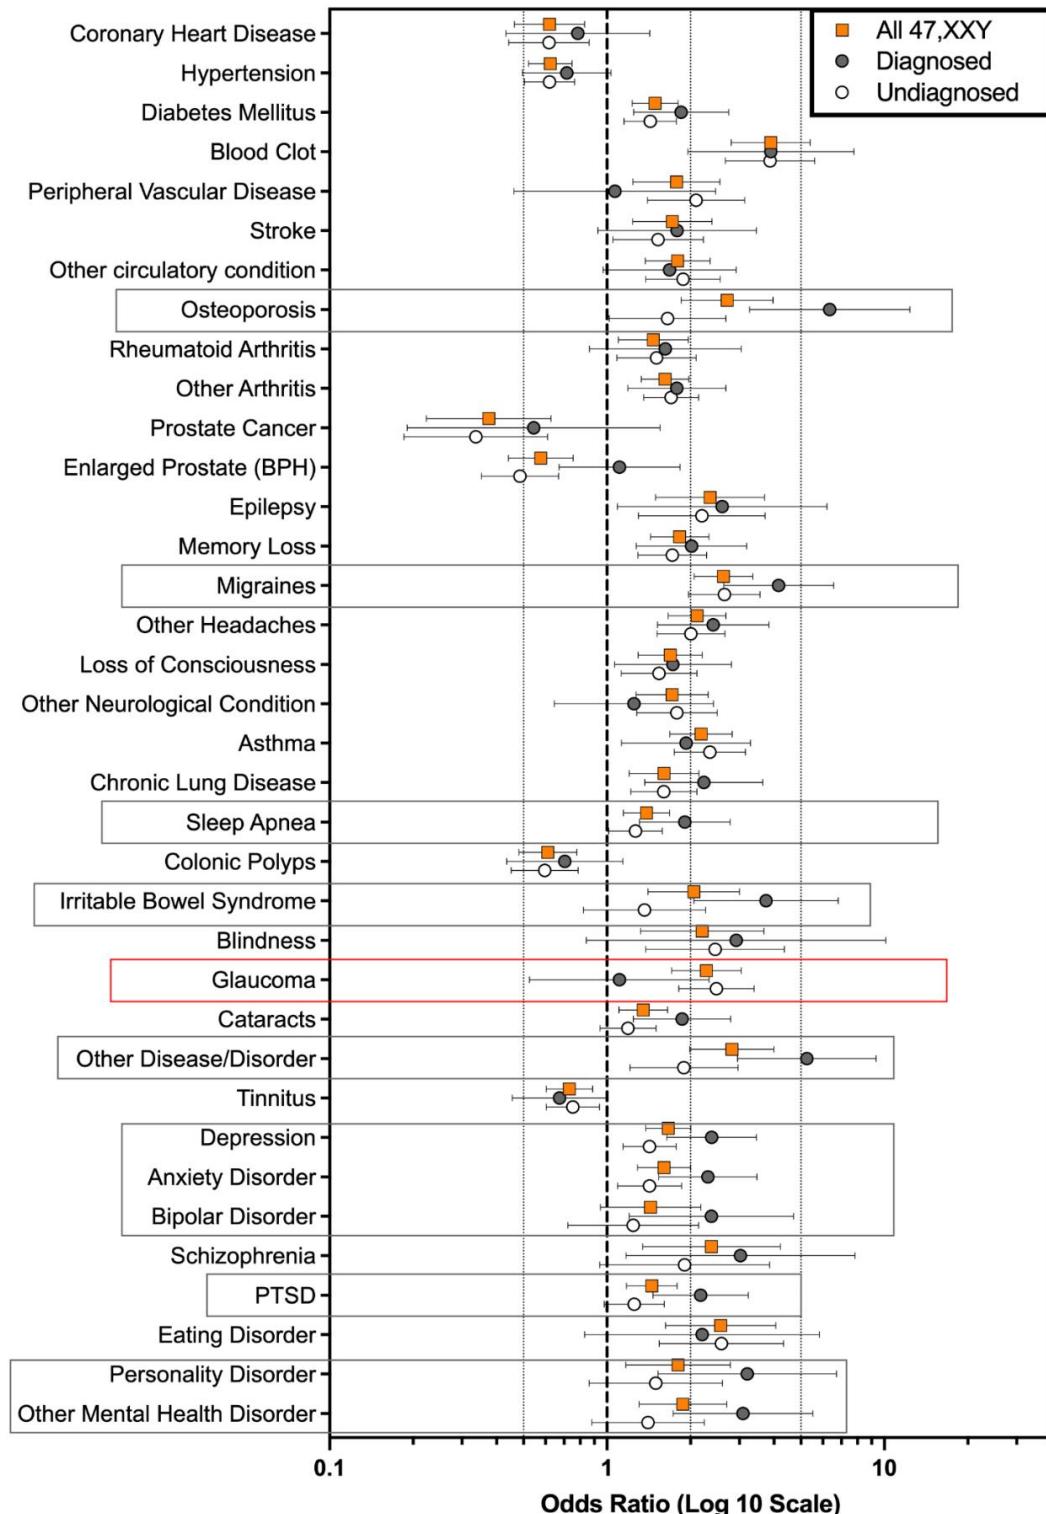

This supplemental material has been provided by the authors to give readers additional information about their work.

**Supplemental Figure 1.** Scatterplot of sex chromosome array intensity over >20,000 X probes and 157 Y probes in all male MVP participants to identify men with an additional X or Y chromosome. Orange dots are males with 47,XXY, blue dots are males with 47,XYY, and black are males with 46,XY

## Supplemental Figure 2. Self-Reported Medical History in Males with 47,XXY Stratified by Clinical Ascertainment Status

Forest plot with odds ratios (point estimate) and 95% confidence intervals (error bars) for self-reported conditions in men with 47,XXY versus 46,XY controls from the Baseline Survey. Only conditions that were significantly different ( $p<0.05$ ) between men with 47,XXY and matched 46,XY controls (orange squares) are included. Individuals were then stratified into a clinical diagnosis of Klinefelter syndrome (gray circles) or no clinical diagnosis (white circles). Statistically significant differences in odds of reporting a specific medical condition between the diagnosed versus undiagnosed groups are indicated in the dashed rectangular boxes; gray indicates higher odds in those with a clinical diagnosis, red indicates higher odds in those without a clinical diagnosis.

**Table S1. Standardized Mortality Ratio by Cause of Death for Males with 47,XXX, 47,XYY, and Either Sex Chromosome Aneuploidy Compared to Matched 46,XY Controls.** LCI = Lower 95% Confidence Interval of the SMR; UCI = Upper 95% Confidence interval of the SMR. NOS = not otherwise specified. Statistically significant differences are in red for increased risk and blue for decreased risk. SMR could not be calculated for causes without any deaths. Categories without any deaths are not included.

**Table S2. Military Service, Morbidity, and Participant Reported Outcome Measures in Males with 47,XXY Stratified by Clinical Diagnosis Status.** Colored text indicate the data source and subsequently the sample size available for that variable: black is the electronic health record database, blue is the Baseline Survey, and green is the Lifestyle Survey. Data are shown as mean ± standard deviation (SD) and/or median (range) for continuous data, and n (%) for categorical data, unless otherwise specified. Bolded p-values indicate statistical significance at an alpha of 0.05. ^Percentages are calculated from the total with non-missing data; chi-squared analyses included missing as a category. VA = Veterans Affairs; VR-12 = Veterans RAND 12 Item Health Survey (higher values indicate better QoL). MOS Cog-R = Medical Outcomes Survey Cognitive Functioning Revised Scale (higher values indicate more problems). PHQ-4 = Patient Health Questionnaire-4 (higher values indicate more concern). PCL = Post-traumatic stress disorder Checklist (higher values indicate more concern).

Skin Condition	59	441	243	2142	1.18	1.60	0.87

The number of participants endorsing each of the 75 potential conditions from the Baseline Survey and calculated odds ratio (OR) with upper and lower 95% confidence intervals (U95%CI, L95CI). Bolded values are significantly different between SCA cases and controls at an alpha of 0.05
