

A. Alzheimer's Disease

B. Other neurodegenerative conditions

C. Aging conditions

Supplementary Figure 5. Distribution of genetic scores of Alzheimer's disease (A) and other neurodegenerative (B) and aging (C) conditions along the disease continuum stratifying by amyloid status. Pairwise comparisons are assessed to compare the median (Wilcoxon test) of the PRS among groups. Significant results at nominal p-value are displayed (p-value <0.05*; p-value <0.01**; p-value <0.001***).
