

Supplementary Figure S4. Comparison of FoxP3⁺ T cell density to CD3⁺ T cell density ratio between *Fn*-high and *Fn*-low/negative MSI-high CRCs

(a) There was a tendency toward lower FoxP3⁺ T cell to CD3⁺ T cell ratio at the invasive margin (IM) area in the *Fn*-high subgroup than in the *Fn*-low/negative subgroup, but statistical significance was not reached. (b) There was a tendency toward lower FoxP3⁺ T cell to CD3⁺ T cell ratio at the center of tumor (CT) area in *Fn*-high subgroup than in *Fn*-low/negative subgroup, but statistical significance was not reached.
