

S. Figure 1

Supplementary figure 1. Inducible expression of N-terminal gasdermin E (N_{term}Gas) in KP-1.9 lung adenocarcinoma cells activates pyroptosis (A) causing cell death (B), and the emission of extracellular ATP (C). Error bars, SD. One-way ANOVA followed by Tukey's HSD test used for statistical significance (***) = $p < 0.001$, (****) = $p < 0.0001$). N = 6 per group.
