

## S. Figure 3

**Supplementary figure 3.** Cytokines and chemokines emitted after activation of apoptosis in MC-38 cells. Cell-free supernatant was collected from MC-38-C<sub>term</sub>Cas8 cells after 0,2, and 4-hours of dox addition and analyzed using a 44-plex cytokine chemokine assay. One-way ANOVA followed by Tukey's Honestly Significant Difference test used for statistical significance (\* =  $p < 0.016$ , \*\* =  $p < 0.01$ , \*\*\* =  $p < 0.001$ , \*\*\*\* =  $p < 0.0001$ ). Error bars, SD. N = 8 per group.
