

S. Figure 4

Supplementary figure 4. Changes in cytokines and chemokines after pyroptosis in MC-38 tumour homogenates. Tumour homogenates were collected 24 hours after the addition of doxycycline medicated feed and analyzed using a 44-plex cytokine chemokine assay. Student's t test was used for statistical significance (* = $p < 0.05$, ** = $p < 0.01$, *** = $p < 0.001$, **** = $p < 0.0001$). Error bars, SD. N = 15 per group.
