

Supplementary Table 1| Data availability of terrestrial insects for various biodiversity metrics. Discrepancies in data availability between metrics are caused by the possibility of calculating each metric on the available data. For example, some time series may be extremely sparse (have only few species or individuals), and some metrics can only be calculated on integers, which were mostly, but not always available. Abundance and richness data were taken from original publications, also when no underlying data were available.

| Metric | Studies | Sites |
|-------------------------|---------|-------|
| Abundance | 105 | 920 |
| Richness | 75 | 780 |
| Diversity | 57 | 551 |
| Rarefied richness | 53 | 529 |
| Coverage based richness | 51 | 528 |
| SAD intervals | 57 | 551 |
| Populations | 56 | 584 |

Supplementary Table 2| Characteristics of the full dataset at the study level. The number of taxa is only applicable to datasets reporting full community composition.

| | Minimum | Median | Maximum |
|---------------------------|---------|--------|---------|
| Number of sites | 1 | 3 | 138 |
| Study duration | 9 | 20 | 64 |
| Number of years with data | 2 | 11 | 53 |
| Start year | 1951 | 1990 | 2009 |
| End year | 1985 | 2011 | 2021 |
| Number of taxa | 2 | 56.5 | 1757 |

Supplementary Table 3 | Number of datasets available per continent and biodiversity metric.

| Metric | Africa | Asia | Europe | Latin America | North America | Oceania |
|-----------------------|--------|------|--------|---------------|---------------|---------|
| Abundance | 1 | 13 | 54 | 14 | 18 | 5 |
| Richness | 0 | 8 | 39 | 10 | 15 | 3 |
| Community composition | 0 | 4 | 27 | 9 | 15 | 2 |

Supplementary Table 4 | Details on the source data underlying this study.

| Datasource ID | Taxon | Place | Metrics | Time span | | | Number of sites | Number of species | url | License | Reference |
