	2019	15.49	9.09	59.22	75.36	74.84	79.29
By Alzheimer's Disease and Related Dementias							
ADRD	2013	15.11	9.34	65.53	54.21	49.42	57.01

	2014	15.05	9.72	64.59	56.31	51.31	58.01
	2015	14.94	9.71	63.29	60.36	56.50	61.45
	2016	15.04	9.86	62.71	65.94	63.13	66.57
	2017	15.33	9.84	61.46	69.54	69.05	69.83
	2018	15.57	9.78	60.00	72.33	72.88	72.98
	2019	16.23	9.99	59.16	74.08	76.46	76.08

Notes: ADRD is Alzheimer’s disease and related dementias. Other race included Asian, American Indian, Alaska native, native Hawaiian, or Pacific Islander. All outcomes are reported as rates (%).

Hospitalization rate variables included both in-patient hospitalizations, readmissions, and outpatient observational visits. Hospitalization rate post-discharge is measured within 30 days of HHA discharge.

Timely initiation of care refers to home health spells which started within two days of an inpatient discharge. Ambulation, bed transferring, and ambulation are measures of functional improvement reported in OASIS.

eTable 3. Trends in patient outcomes among high quality HHAs by race (2013-2019)

year	White							Black						
	2013	2014	2015	2016	2017	2018	2019	2013	2014	2015	2016	2017	2018	2019

	$\beta_{\#}$	post-trend change	0.005	0.001	0.01
	$\beta_! + \beta_{\#}$	post-trend	0.01	0.001	<.001

Notes: hospitalization rate variables included both in-patient hospitalizations, readmissions, and outpatient observational visits; timely initiation of care refers to home health spells which started within two days of an inpatient discharge. Parameters are estimated from an ITS regression model of $Y = \alpha + \beta_!T + \beta''X + \beta_{\#}XT + \varepsilon$ where T = linear time and X = post-star ratings period. The pre-star ratings period was from January 2013 to July 2015 and the post-star ratings period was from August 2015 to December 2019. The unit of analysis is half-years (6 months).

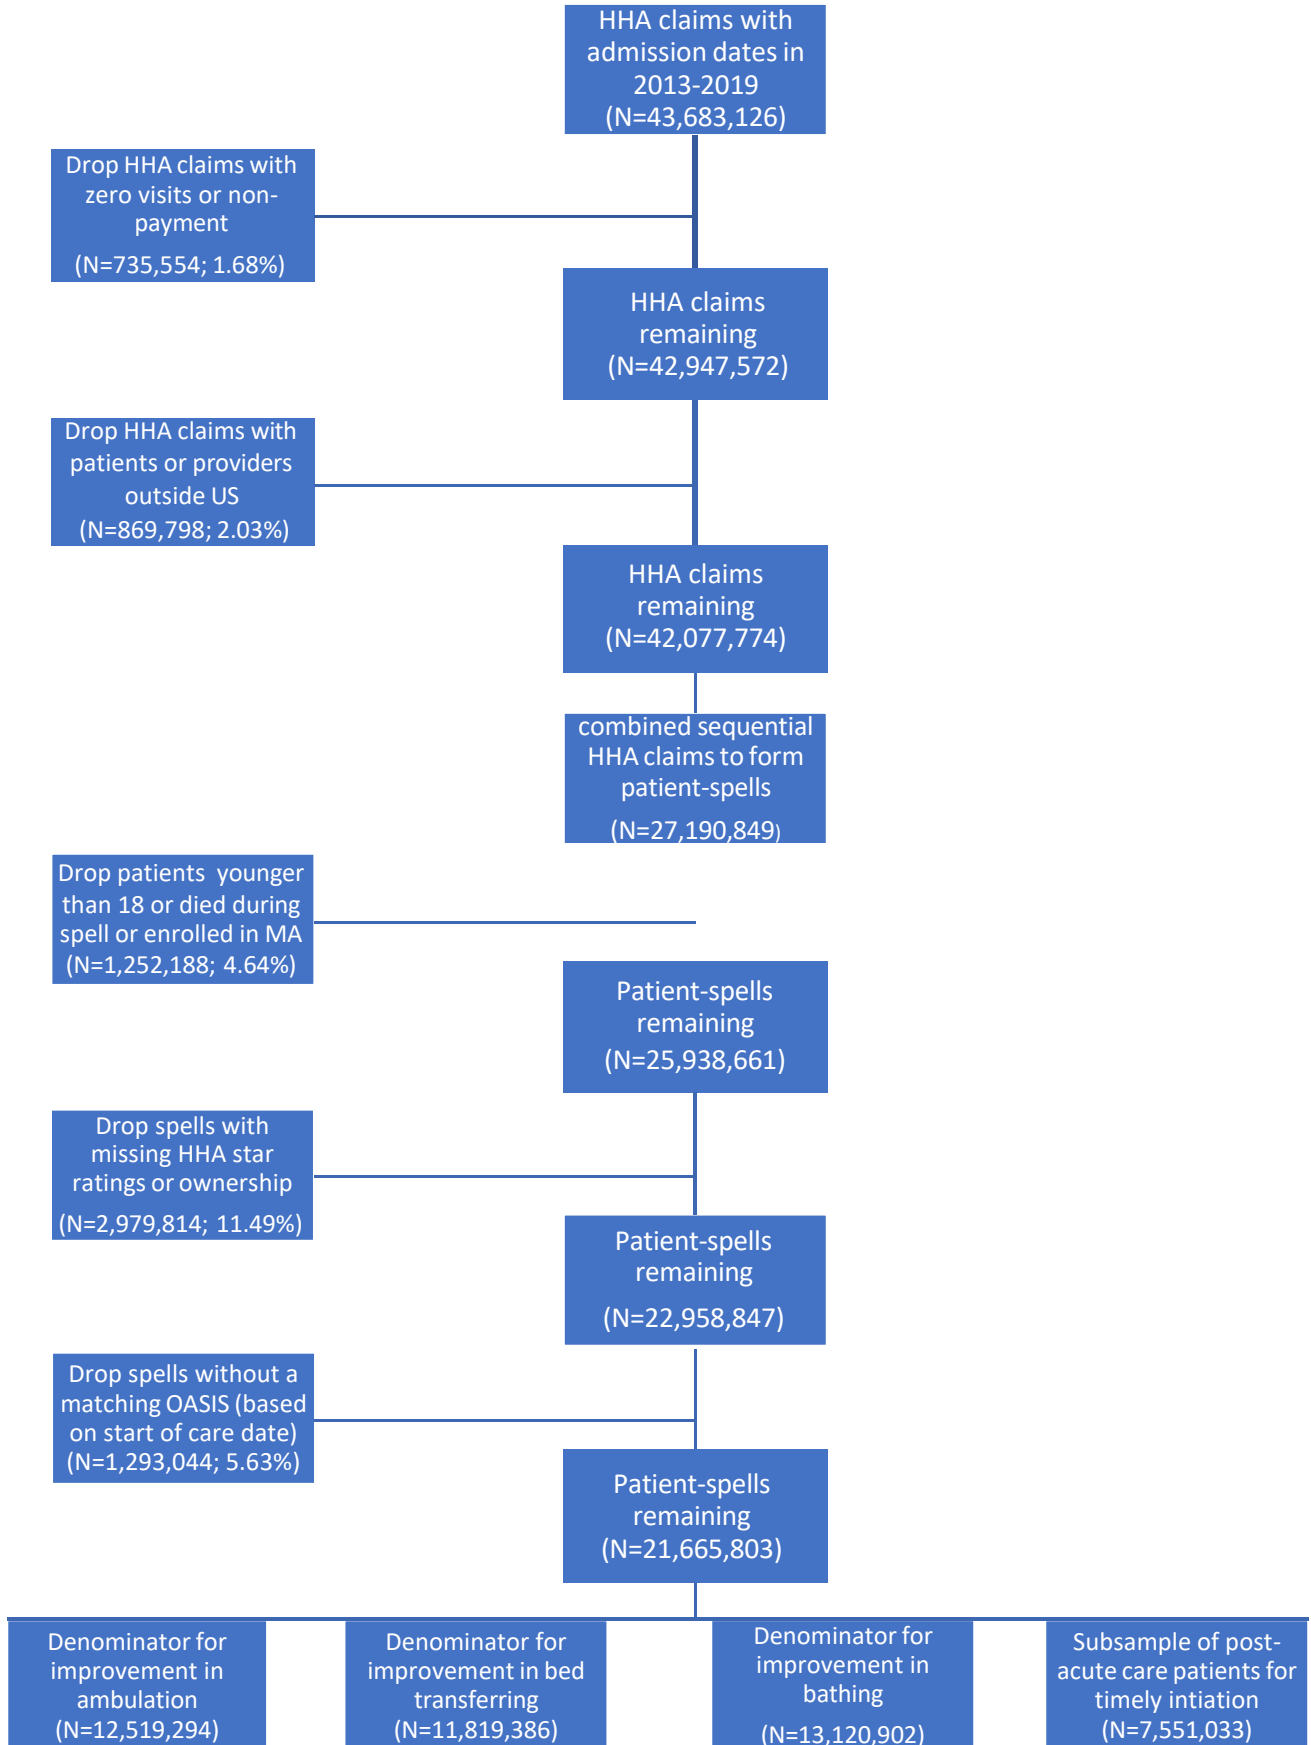

eTable 7. Rates and trends in patient outcomes among high quality HHAs (both star ratings) by patient characteristics (2013-2019)

Notes: HHA is home health agency. Dual is dually eligible for Medicare and Medicaid. ADRD is Alzheimer's disease and related dementias. Hospitalization rate variables included both in-patient hospitalizations, readmissions, and outpatient observational visits. Timely initiation of care refers to home health spells which started within two days of an inpatient discharge. Other race included Asian, American Indian, Alaska native, native Hawaiian, or Pacific Islander. Parameters are estimated from an ITS regression model of $Y = \alpha + \beta_1 T + \beta_2 X + \beta_3 XT + \varepsilon$ where T = linear time and X = post-star ratings period. The pre-star ratings period was from January 2013 to December 2015 and the post-star ratings period was from January 2016 to December 2019. The unit is year.

eFigure 1. Study Flowchart

Notes: We started with all claims identified in the Medicare HHA FFS claims data (this included both HHA users who came from the community, hospital, and other post-acute care settings). We then excluded HHA claims with zero visits or non-payment and claims for patients who were under 18, had Medicare Advantage, resided outside of the U.S., or died during the spell. We also excluded HHA claims for patients with providers that were missing information about their quality of patient care star rating, patient satisfaction rating, or HHA ownership type. The denominator for each of the outcomes in the Interrupted Time Series analysis varied. The sample for the claims-based outcomes (e.g., hospitalization measures) was 21,655,803. The sample for the improvement in functional status measures varied based on the number of patient-spells which met the OASIS-based criteria for calculating an improvement in function measure (based on the OASIS start of care and discharge assessments). The sample for the timely initiation of care outcome was based on a subsample of HHA patients who were post-acute care HHA users (e.g., patient-spells that started within 14 days of inpatient discharge).

eFigure 2. Trends in claims-based outcomes by high quality HHA status

Notes: HHA is home health agency. Y-axis is the rate and x-axis is the year.

eFigure 3. Trends in OASIS-based outcomes by high quality HHA status

Notes: HHA is home health agency. Y-axis is the rate and x-axis is the year.
