

Supplemental information

Unveiling the pathophysiology of restless legs syndrome through transcriptome analysis

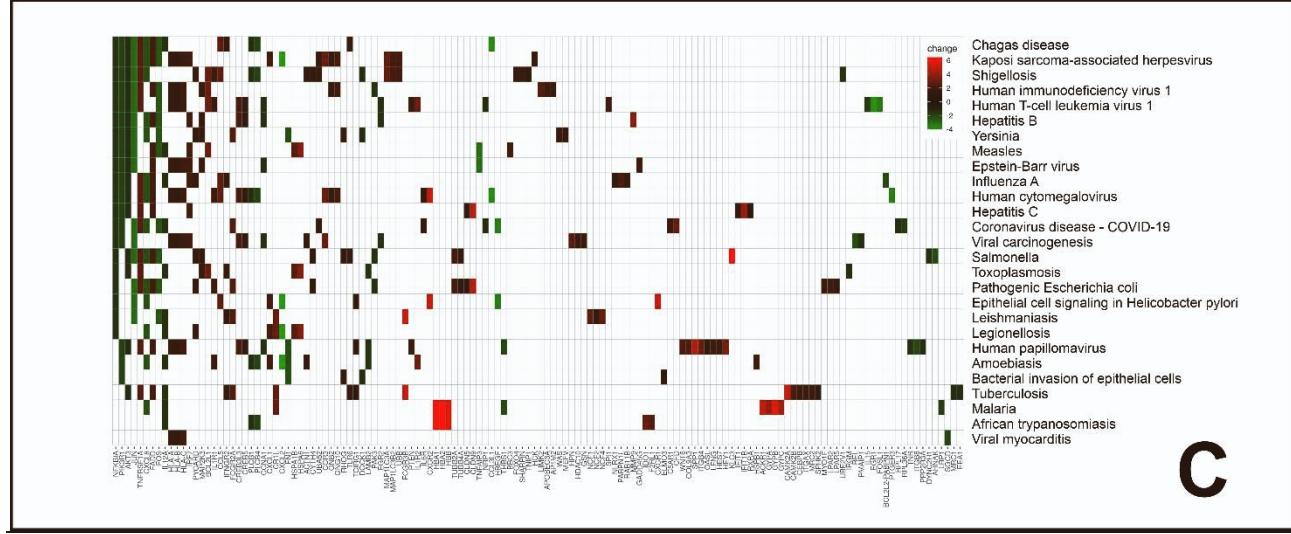

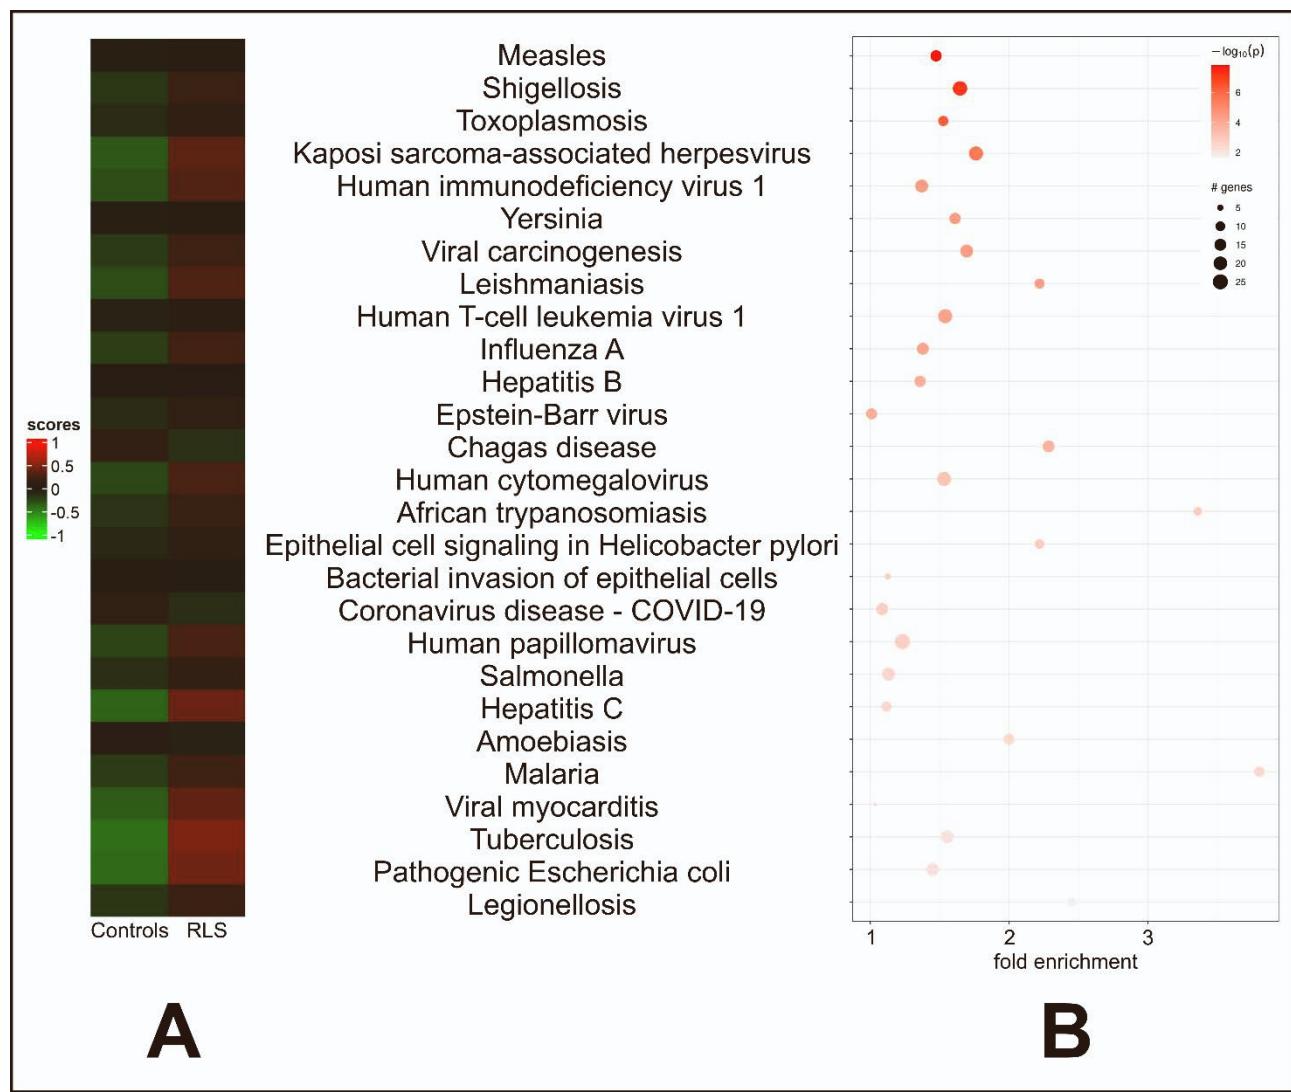

Maria P. Mogavero, Michele Salemi, Giuseppe Lanza, Antonio Rinaldi, Giovanna Marchese, Maria Ravo, Maria Grazia Salluzzo, Amedeo Antoci, Lourdes M. DelRosso, Oliviero Bruni, Luigi Ferini-Strambi, and Raffaele Ferri

Supplemental Figure S1 (related to Methods). Statistical power calculation based on our data.

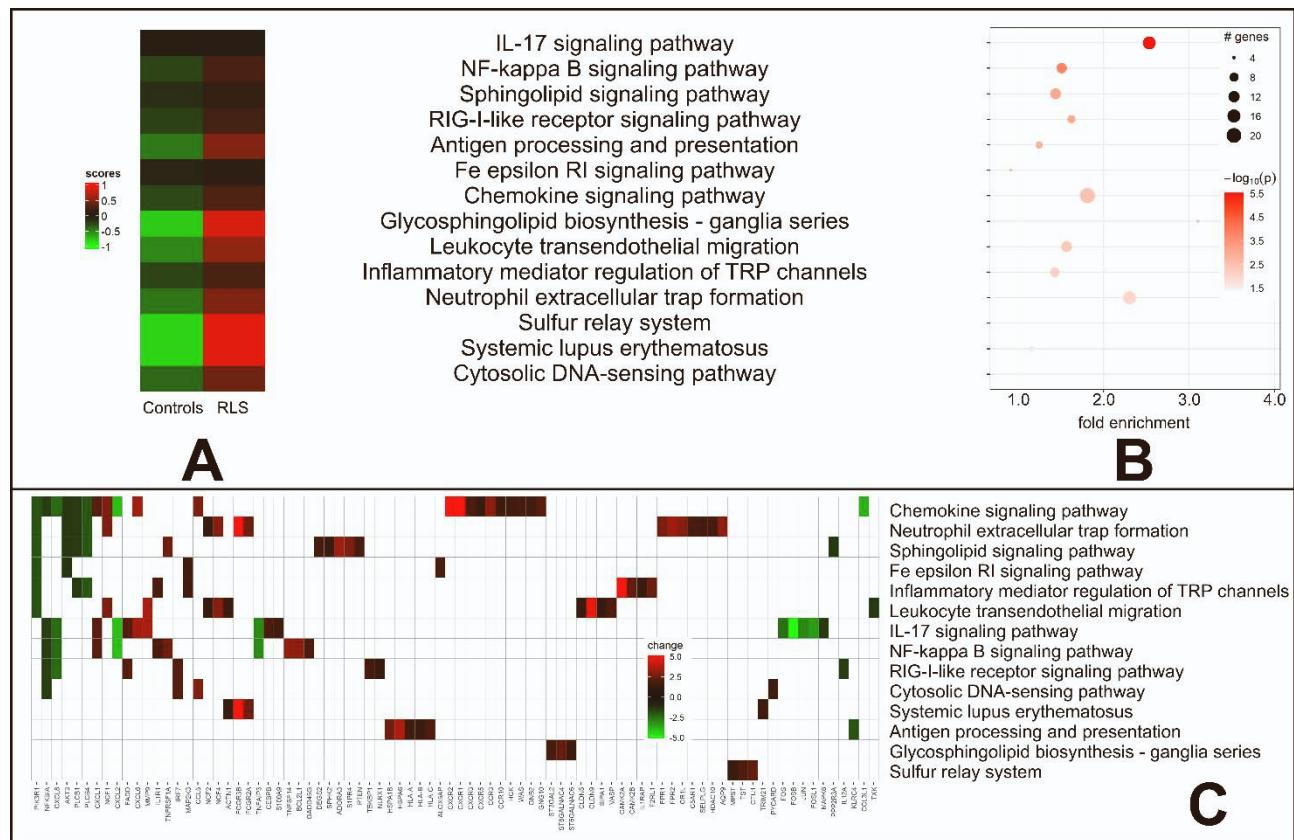

Supplemental Figure S2 (related to Table1).

Statistically significant pathways found by pathfinder involved in infections. Panel A: The heatmap shows the average of aggregated term scores per sample for patients with RLS and healthy controls (CTRL). Panel B: Bubble plot of selected enrichment KEGG pathways. P values were shown by different colors, the size of bubbles indicates the gene count of each pathway. Panel C: Term-Gene Heatmap, shows the heatmap of genes that are involved in the enriched terms, as well as the common or distinct genes between different terms. The tile colors indicate the change values.

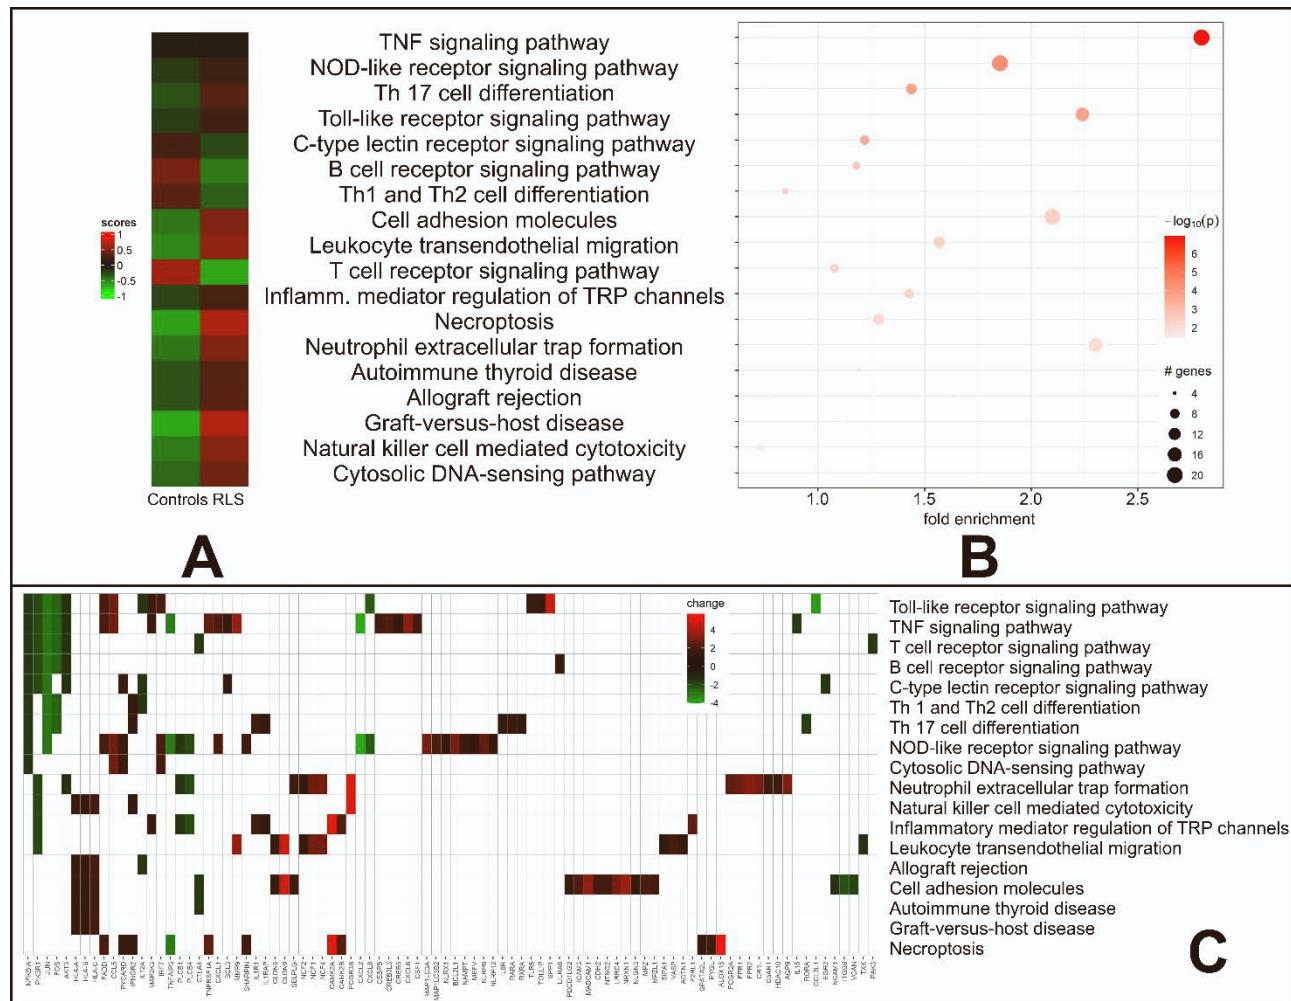

Supplemental Figure S3 (related to Table1).

Statistically significant pathways found by pathfinder involved in inflammation. Panel A: The heatmap shows the average of aggregated term scores per sample for patients with RLS and healthy controls (CTRL). Panel B: Bubble plot of selected enrichment KEGG pathways. P values were shown by different colors, the size of bubbles indicates the gene count of each pathway. Panel C: Term-Gene Heatmap, shows the heatmap of genes that are involved in the enriched terms, as well as the common or distinct genes between different terms. The tile colors indicate the change values.

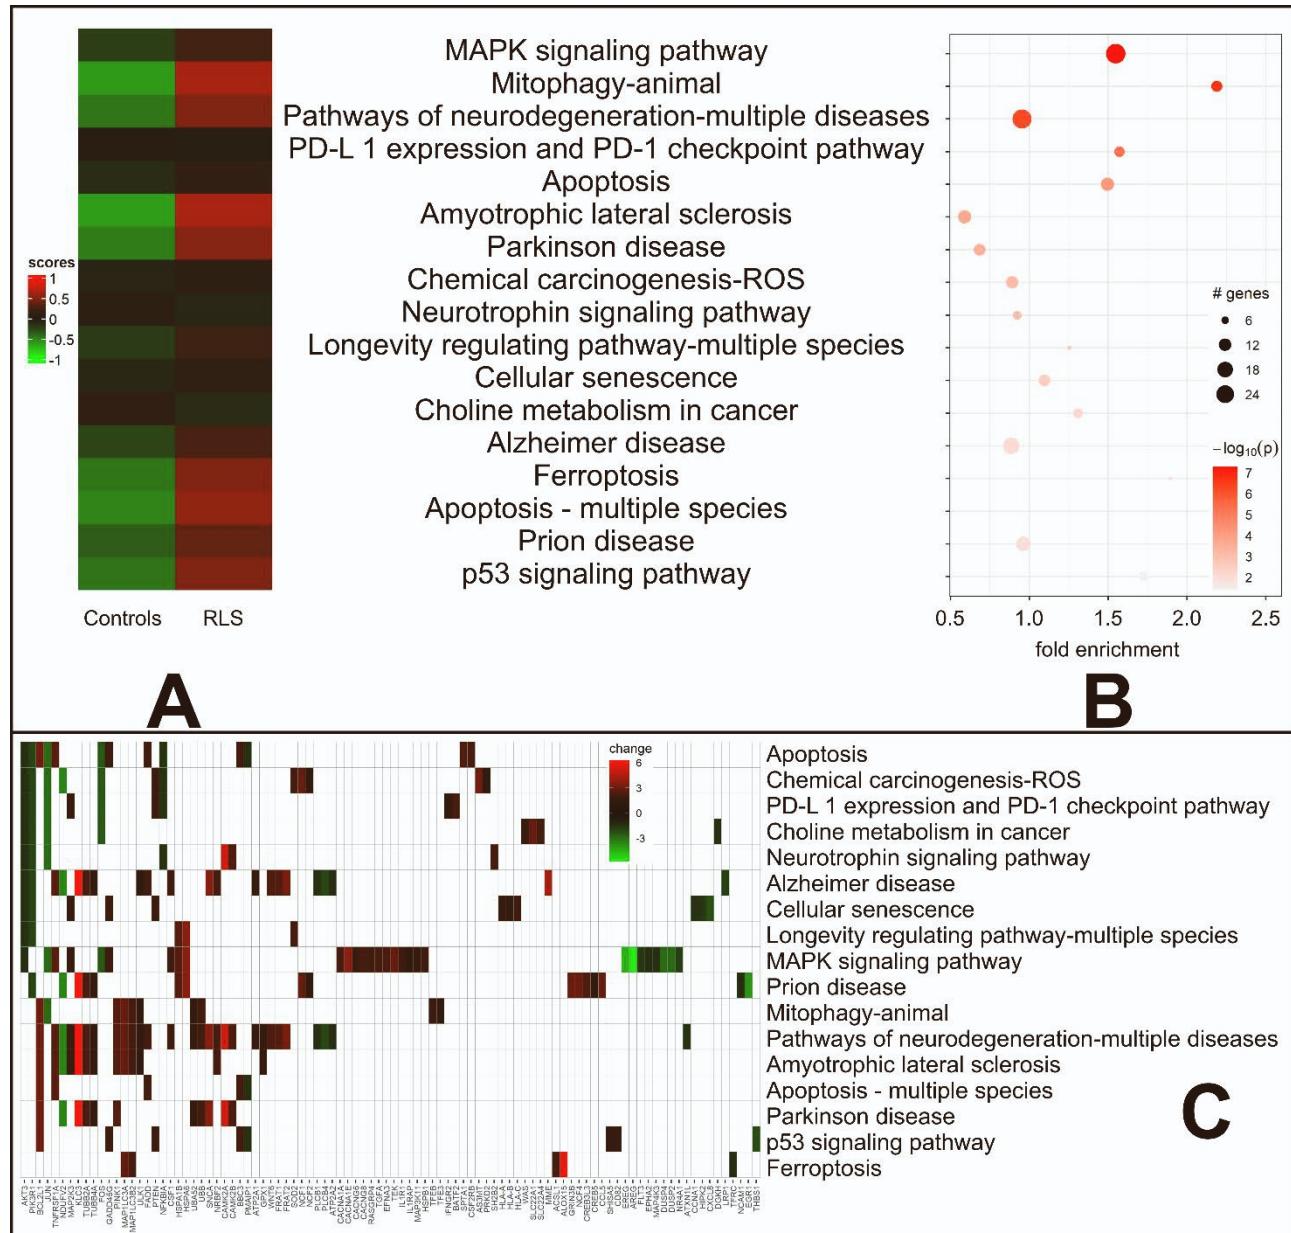

Supplemental Figure S4 (related to Table1).

Statistically significant pathways found by pathfinder involved in immunology. Panel A: The heatmap shows the average of aggregated term scores per sample for patients with RLS and healthy controls (CTRL). Panel B: Bubble plot of selected enrichment KEGG pathways. P values were shown by different colors, the size of bubbles indicates the gene count of each pathway. Panel C: Term-Gene Heatmap, shows the heatmap of genes that are involved in the enriched terms, as well as the common or distinct genes between different terms. The tile colors indicate the change values.

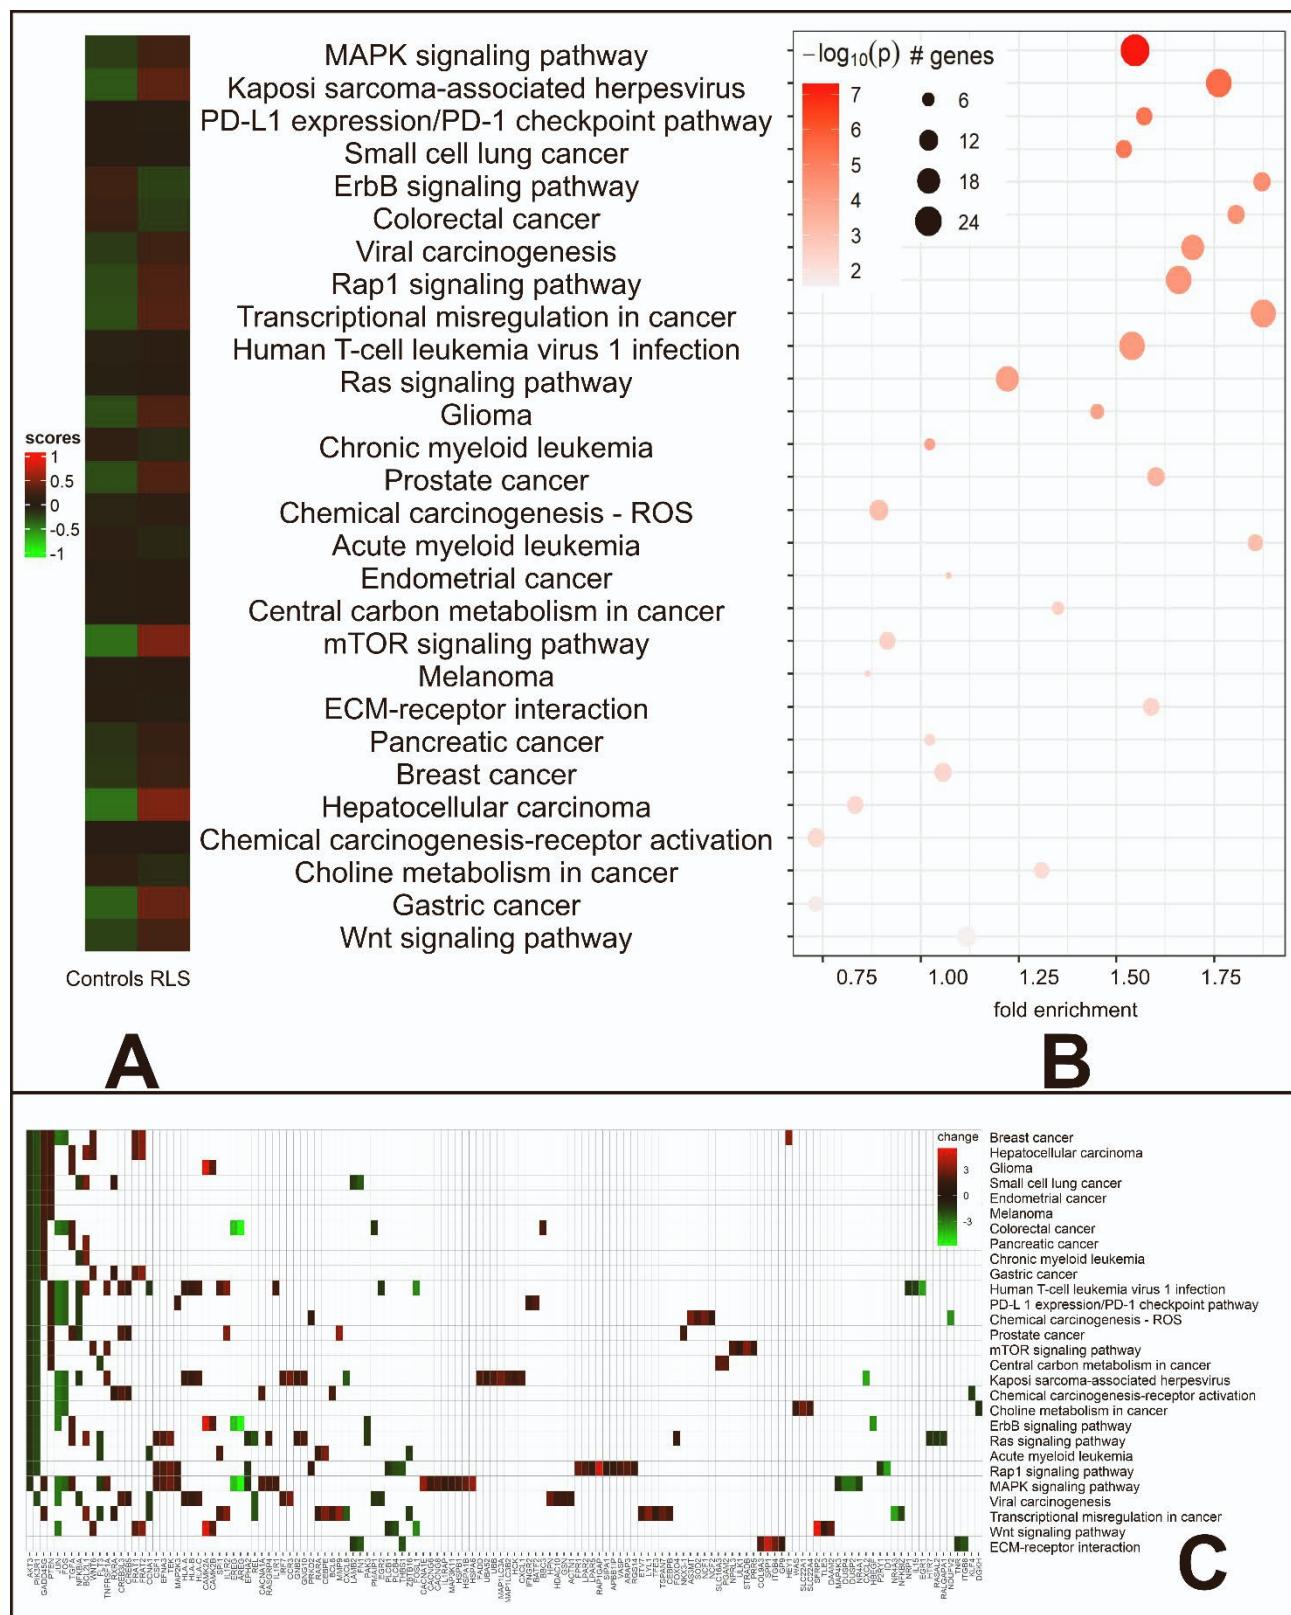

Supplementary Figure S5 (related to Table1).

Statistically significant pathways found by pathfinder involved in neurodegeneration. Panel A: The heatmap shows the average of aggregated term scores per sample for patients with RLS and healthy controls (CTRL). Panel B: Bubble plot of selected enrichment KEGG pathways. P values were shown by different colors, the size of bubbles indicates the gene count of each pathway. Panel C: Term-Gene Heatmap, shows the heatmap of genes that are involved in the enriched terms, as well as the common or distinct genes between different terms. The tile colors indicate the change values.

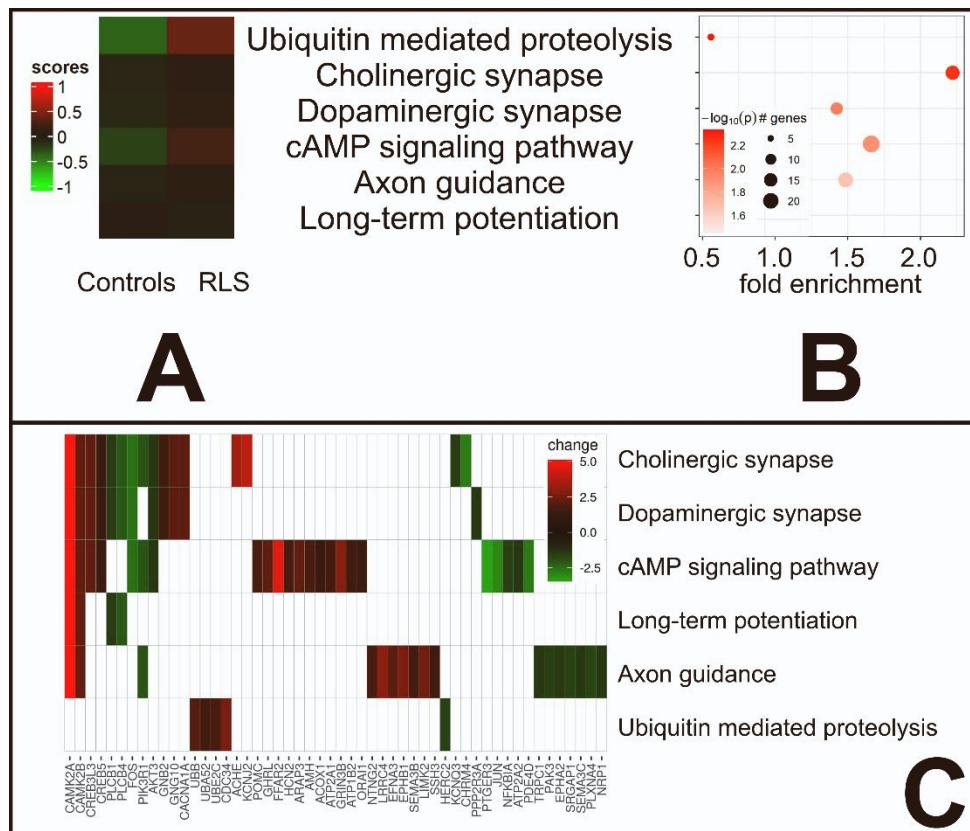

Supplemental Figure S6 (related to Table1).

Statistically significant pathways found by pathfinder involved in cancer. Panel A: The heatmap shows the average of aggregated term scores per sample for patients with RLS and healthy controls (CTRL). Panel B: Bubble plot of selected enrichment KEGG pathways. P values were shown by different colors, the size of bubbles indicates the gene count of each pathway. Panel C: Term-Gene Heatmap, shows the heatmap of genes that are involved in the enriched terms, as well as the common or distinct genes between different terms. The tile colors indicate the change values.

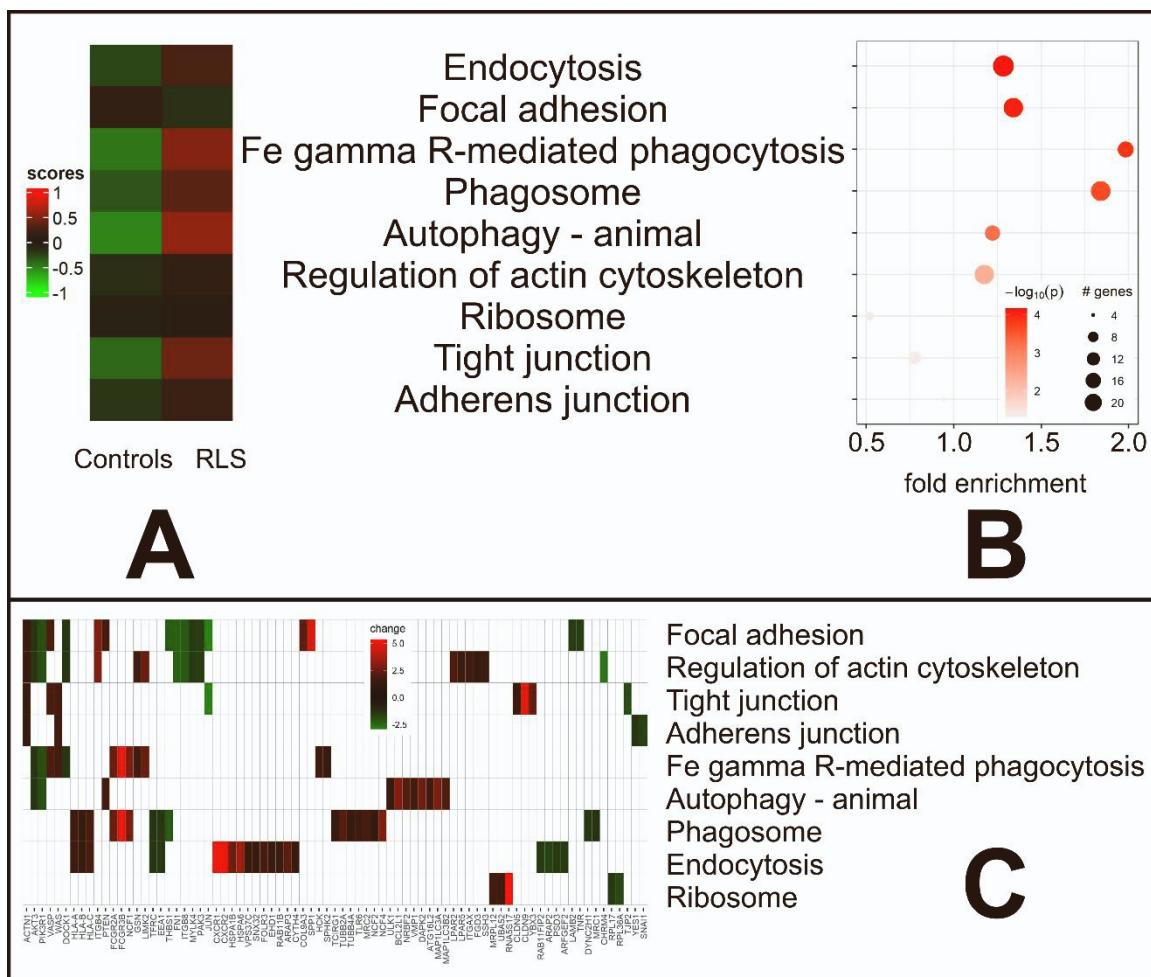

Supplemental Figure S7 (related to Table1).

Statistically significant pathways found by pathfinder involved in neurotransmitters. Panel A: The heatmap shows the average of aggregated term scores per sample for patients with RLS and healthy controls (CTRL). Panel B: Bubble plot of selected enrichment KEGG pathways. P values were shown by different colors, the size of bubbles indicates the gene count of each pathway. Panel C: Term-Gene Heatmap, shows the heatmap of genes that are involved in the enriched terms, as well as the common or distinct genes between different terms. The tile colors indicate the change values.

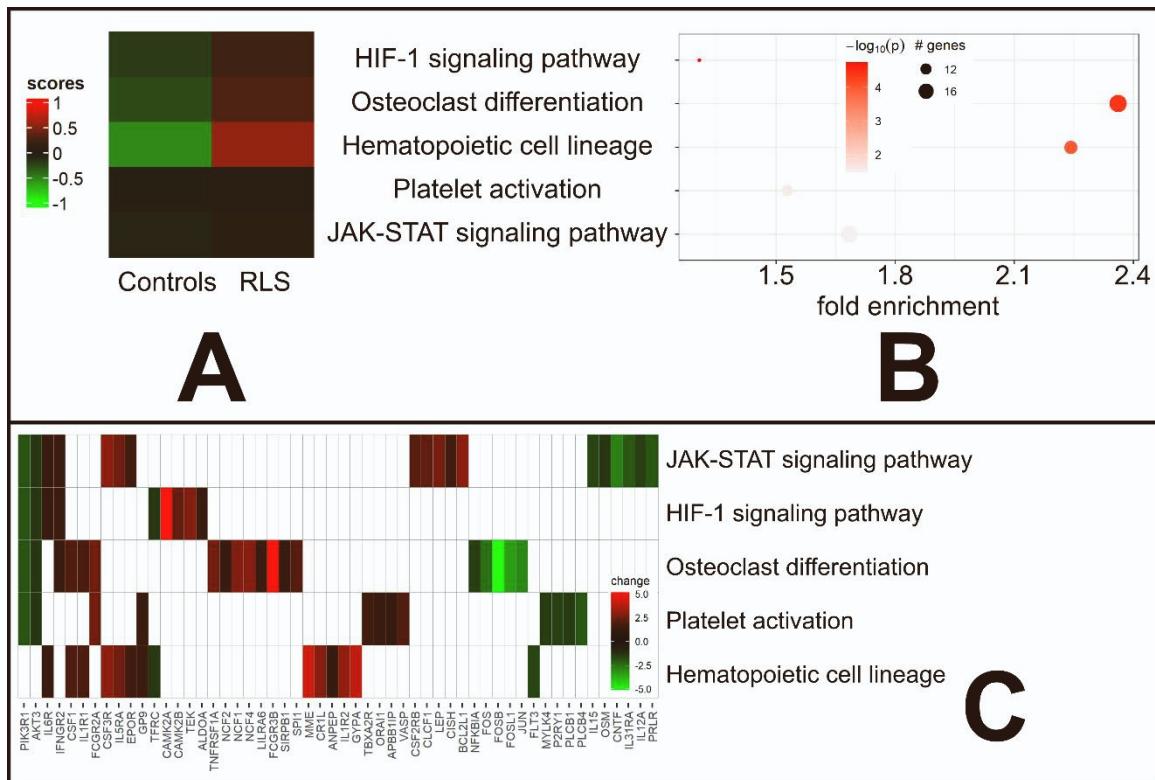

Supplemental Figure S8 (related to Table1).

Statistically significant pathways found by pathfinder involved in cellular processes. Panel A: The heatmap shows the average of aggregated term scores per sample for patients with RLS and healthy controls (CTRL). Panel B: Bubble plot of selected enrichment KEGG pathways. P values were shown by different colors, the size of bubbles indicates the gene count of each pathway. Panel C: Term-Gene Heatmap, shows the heatmap of genes that are involved in the enriched terms, as well as the common or distinct genes between different terms. The tile colors indicate the change values.

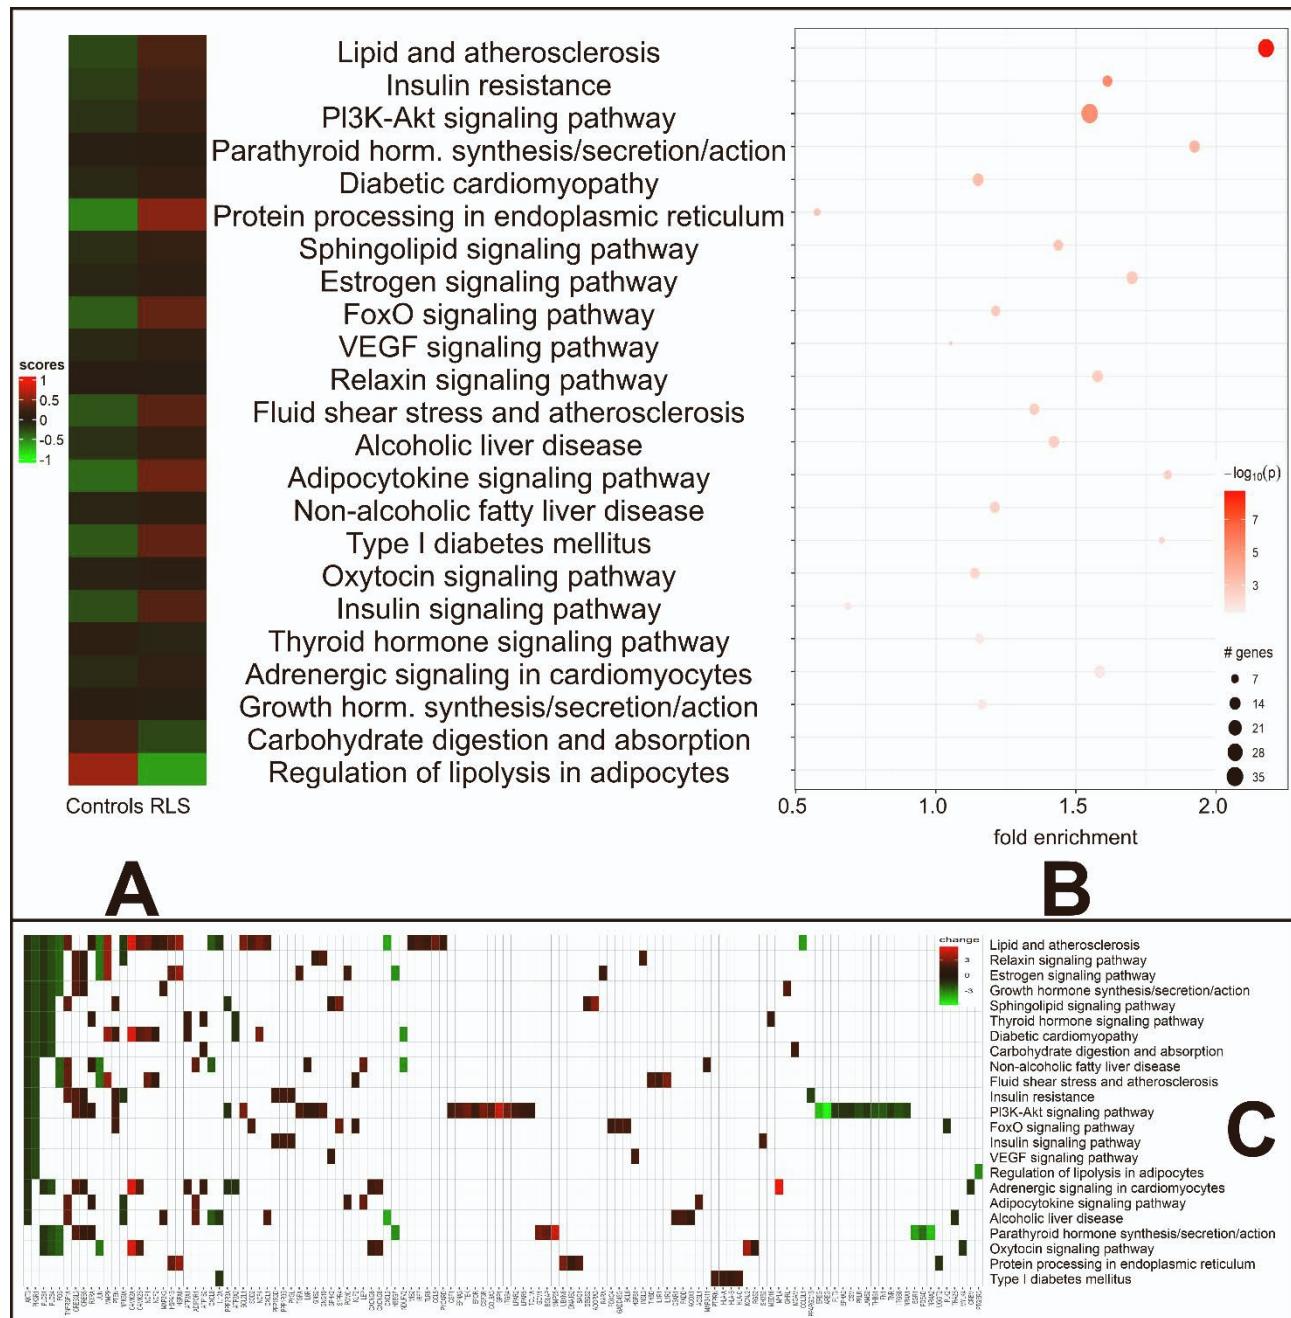

Supplemental Figure S9 (related to Table1).

Statistically significant pathways found by pathfinder involved in blood. Panel A: The heatmap shows the average of aggregated term scores per sample for patients with RLS and healthy controls (CTRL). Panel B: Bubble plot of selected enrichment KEGG pathways. P values were shown by different colors, the size of bubbles indicates the gene count of each pathway. Panel C: Term-Gene Heatmap, shows the heatmap of genes that are involved in the enriched terms, as well as the common or distinct genes between different terms. The tile colors indicate the change values.

Supplemental Figure S10 (related to Table1).

Statistically significant pathways found by pathfinder involved in metabolism. Panel A: The heatmap shows the average of aggregated term scores per sample for patients with RLS and healthy controls (CTRL). Panel B: Bubble plot of selected enrichment KEGG pathways. P values were shown by different colors, the size of bubbles indicates the gene count of each pathway. Panel C: Term-Gene Heatmap, shows the heatmap of genes that are involved in the enriched terms, as well as the common or distinct genes between different terms. The tile colors indicate the change values.

Supplemental Table S2. Gene ontology enrichment analysis: molecular functions, related to Figure 2.

ID	Molecular Functions (MF)	Fold_Enrichment	occurrence	support	lowest_p	highest_p	Upregulated	Downregulated
