

Supplementary Figure S3. Genes differentially expressed as a function of BOR on cycle 3 day 1. Genes differentially expressed on C3D1 versus treatment baseline, as a function of TPST-1120 exposure. Linear associations of C3D1 Log₂ fold change in expression levels of indicated genes and TPST-1120 AUC₀₋₂₄. Data are shown for both TPST-1120 monotherapy (part 1) and TPST-1120 + nivolumab combination therapy (part 2).
