

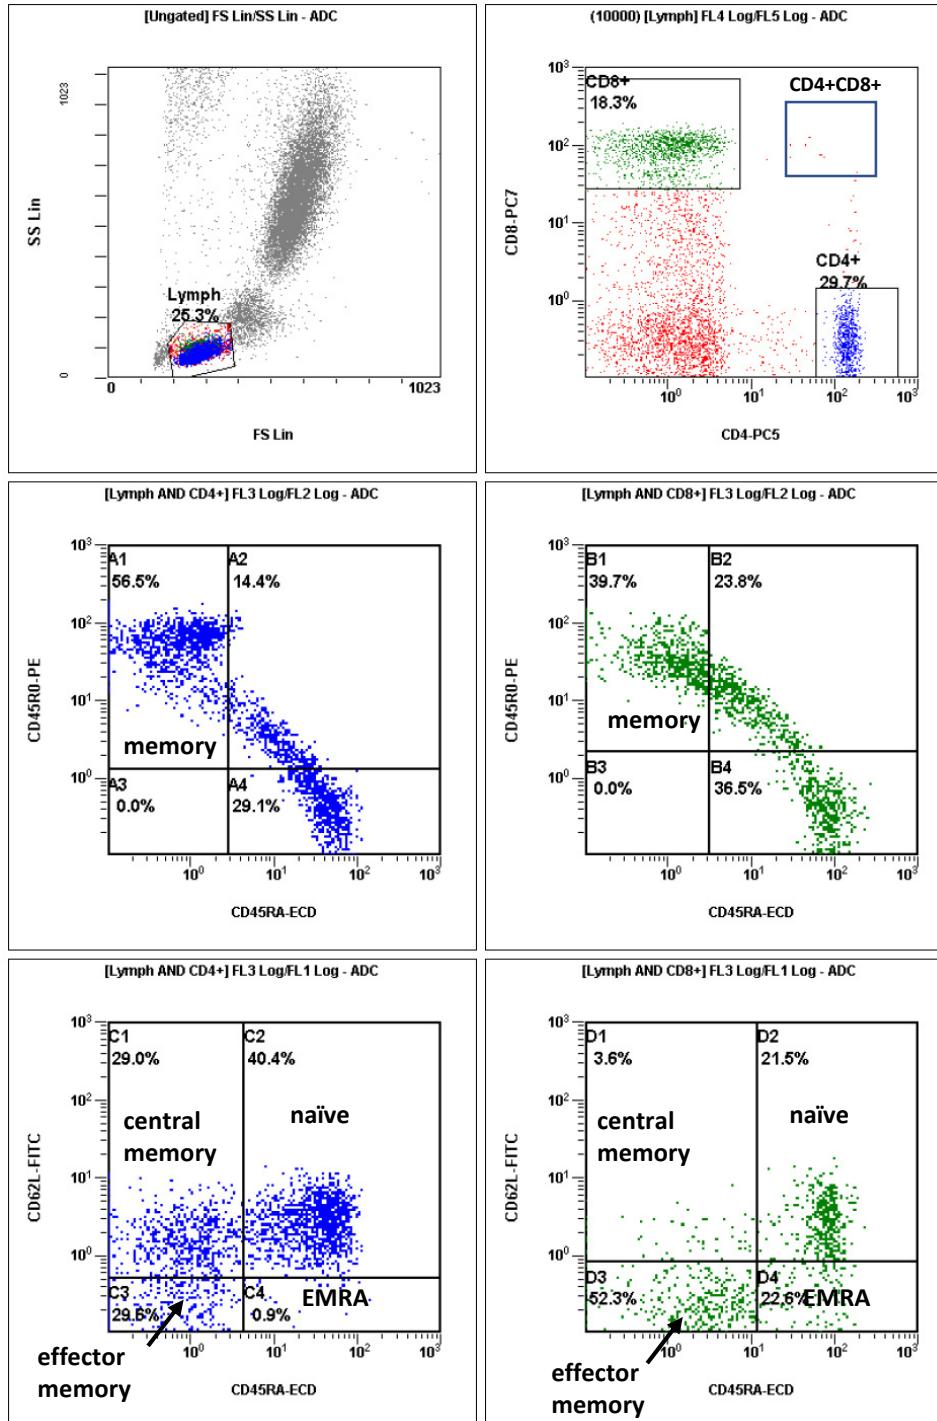

**Figure S1: Gating strategy**

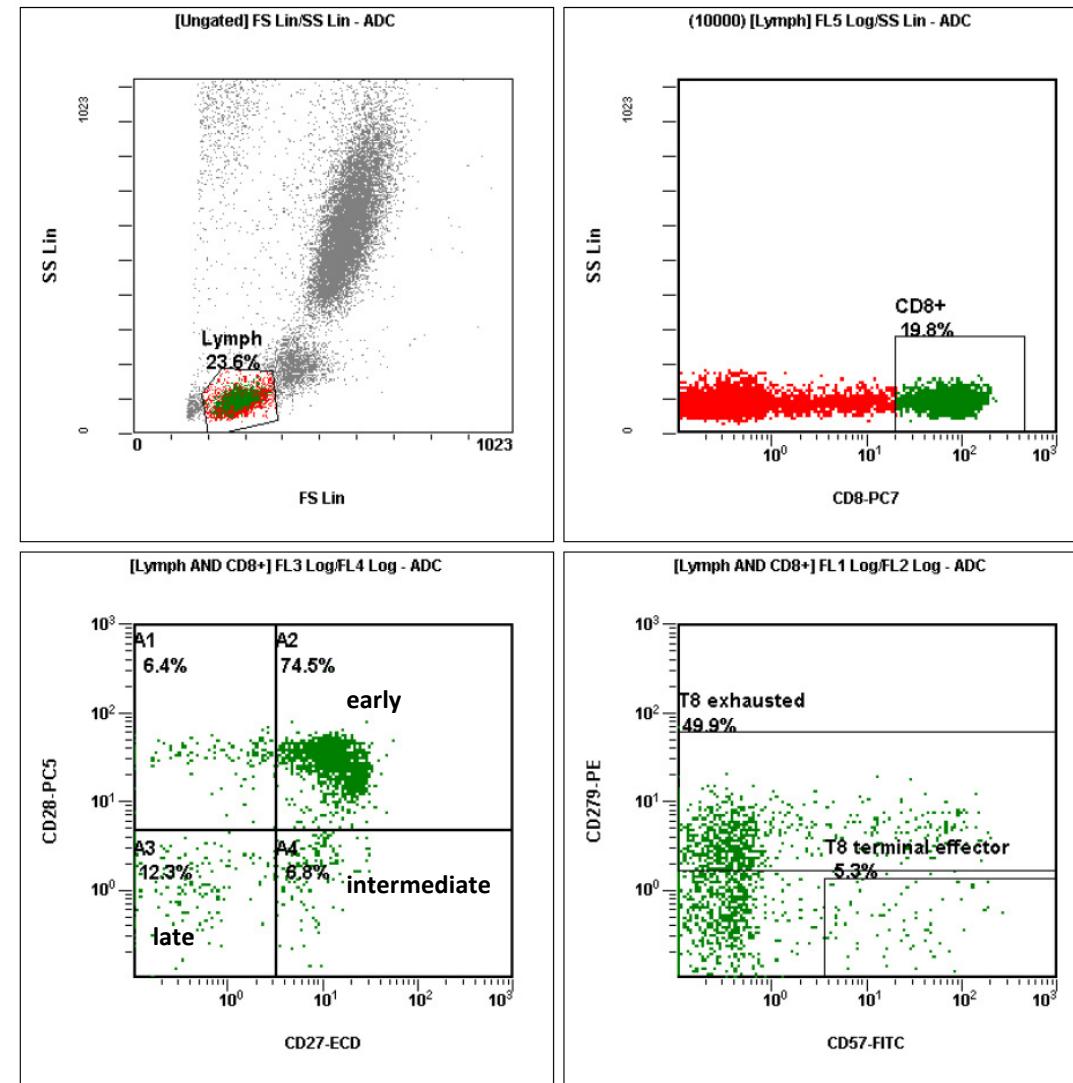

**A: CD4+ and CD8+ T cells; naïve, center memory, effector memory, EMRA**

Lymphocytes were identified by using forward and side scatter. T lymphocytes were defined by positivity for CD8 or CD4 and subdivided into naïve (CD62L+ CD45RA+), memory T cells (CD4+ CD45RA- CD45RO+ /CD8+ CD45RA- CD45RO+) which were further divided into central memory (CD62L+ CD45RA-), effector memory (CD62L- CD45RA-) and effector memory RA+ (EMRA) (CD62L- CD45RA+).

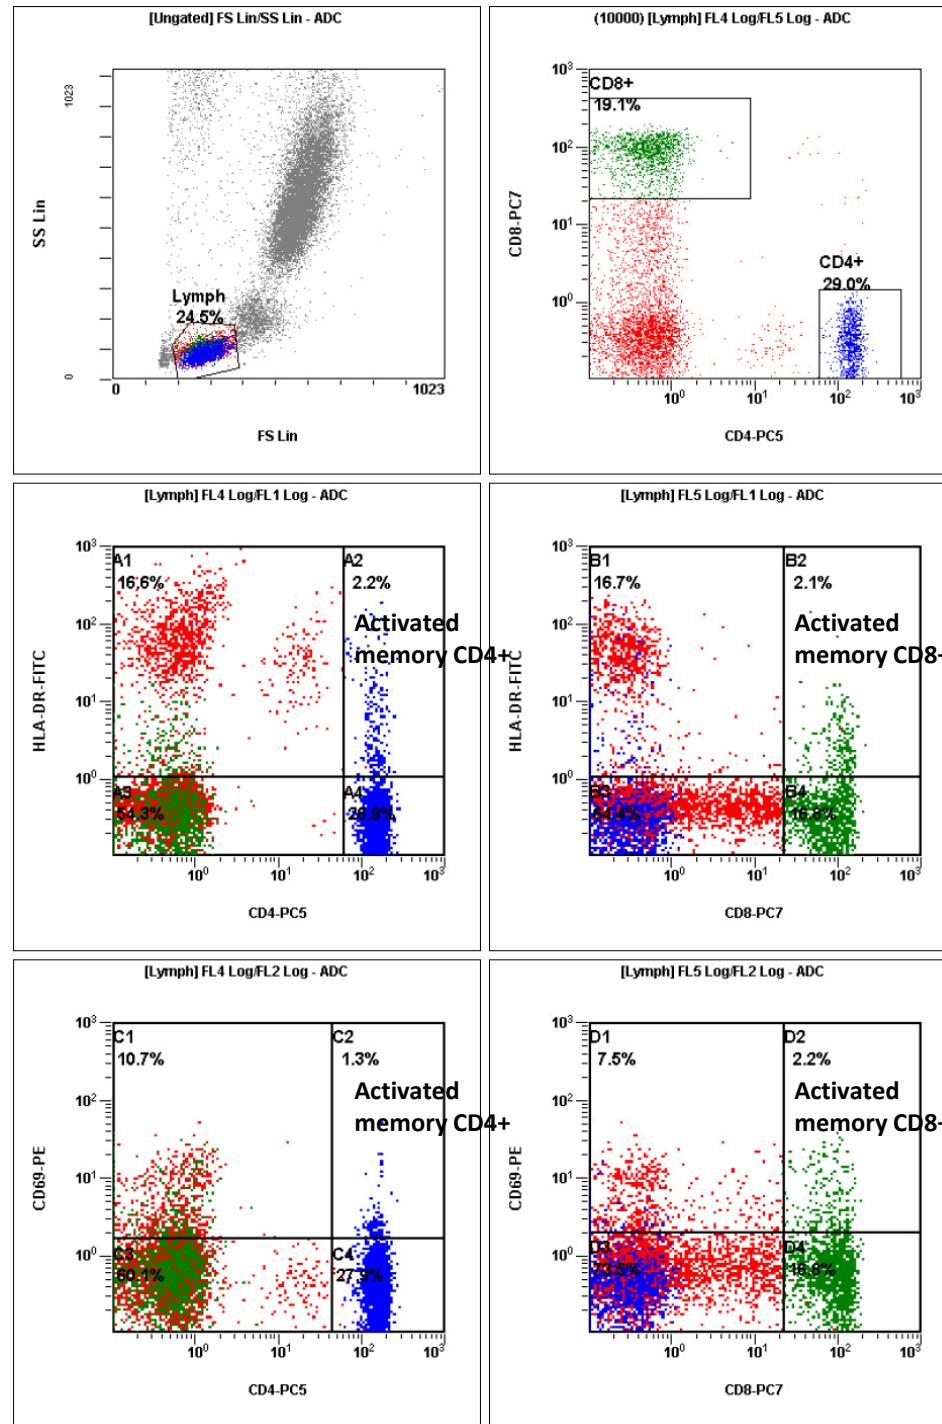

## B: CD8+ T cells; early, intermediate, late, exhausted, terminal effector

Within CD8+ T lymphocytes, activated subsets in early (CD28+ CD27+), intermediate (CD28- CD27+) and late (CD28- CD27-) status were identified as well as exhausted (CD279+) and terminal effector (CD279- CD57+) cells.

### C: Activated memory CD4+ and CD8+ T cells

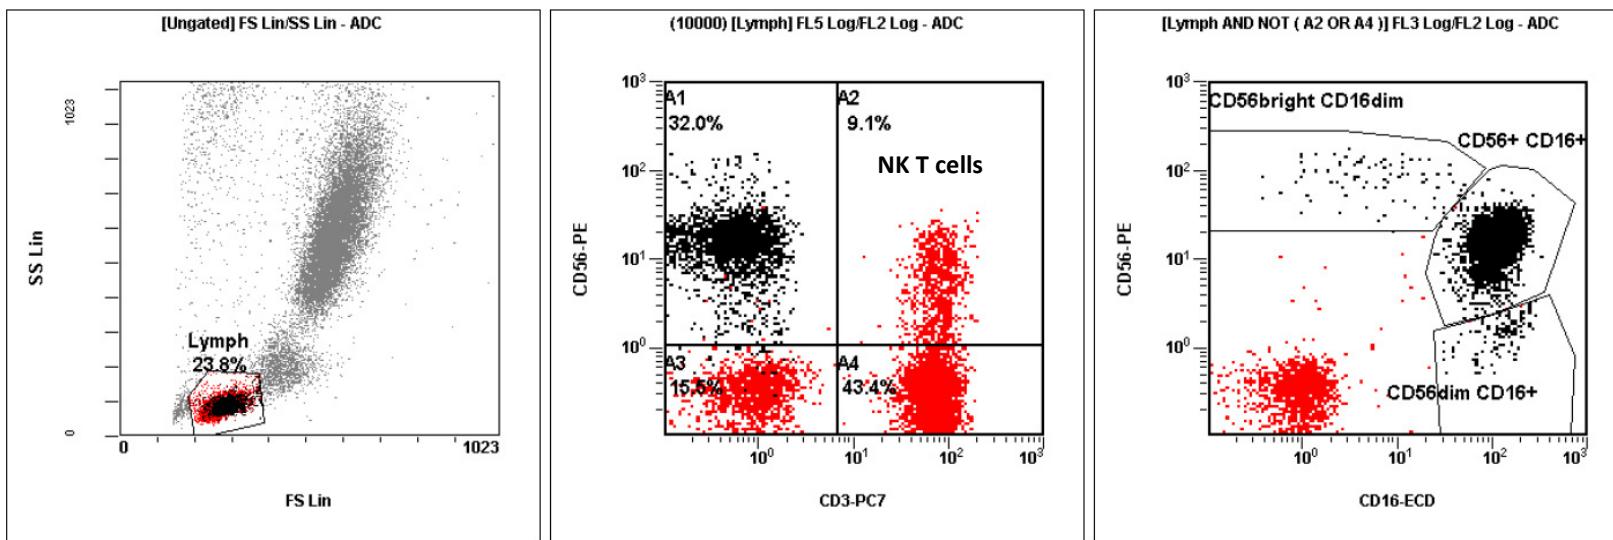

CD4 and CD8 positive T lymphocytes were classified as activated memory (HLA-DR+ or CD69+) cells.

#### D: NK T cells and NK cells

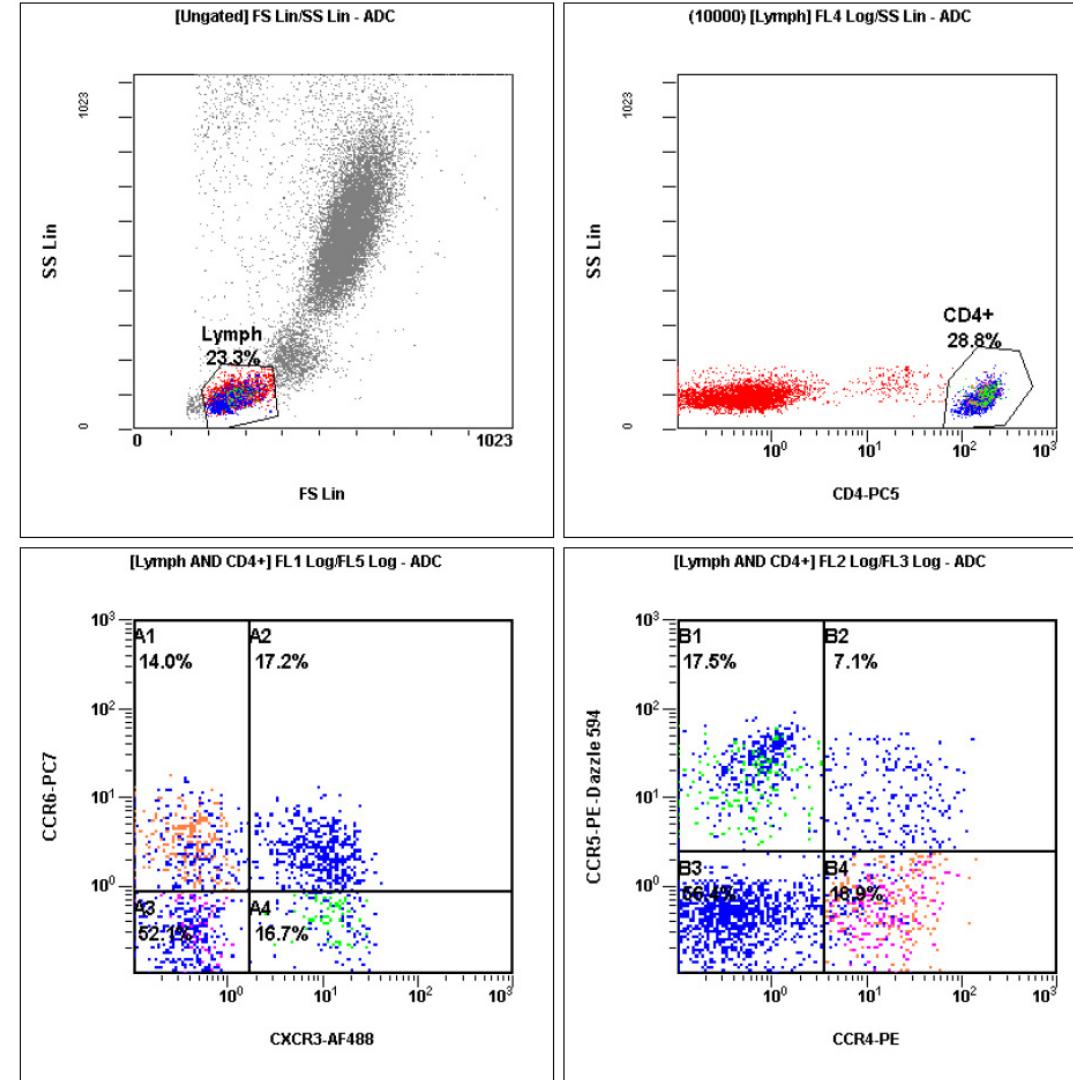

NK-like T cells were defined as CD56+ CD3+.

NK cells were detected as CD56+ cells and subdivided in three NK subsets (CD56+ CD16+, CD56dim CD16bright, CD56bright CD16dim).

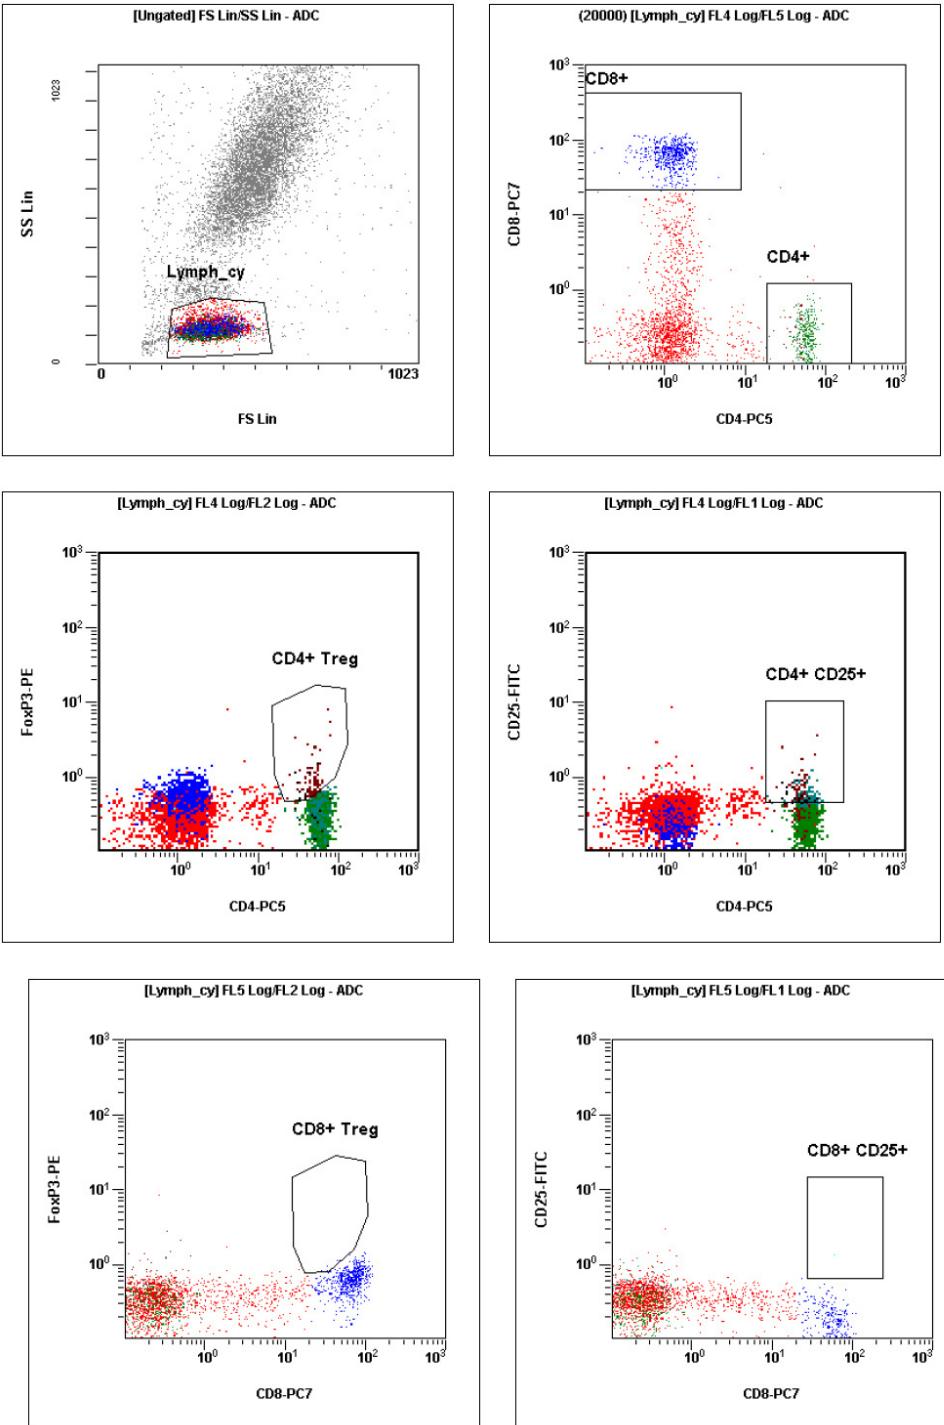

## E: T helper cells

Th1 cells were defined as CD4+ CXCR3+ CCR4- CCR5+ CCR6-;  
Th2 cells were defined as CD4+ CXCR3- CCR4+ CCR5- CCR6-;  
Th17 cells were defined as CD4+ CXCR3- CCR4+ CCR5- CCR6+.

## F: Regulatory CD4 and CD8 T cells

CD4 and CD8 positive T lymphocytes were classified as regulatory (FoxP3+ or CD25+ cells).

A) Men vs. women B) G-CSF vs. no G-CSF C) Platinum vs. no platinum D) Resmission status E) Radiation vs. no radiation F) Infection vs. no infection

Numbers are median values/ml and interquartile ranges in square brackets. p<0.022 = significant. n.s. not significant; EMRA effector memory RA+

CR Complete remission, G-CSF Granulocyte-colony stimulating factor, PD Progressive disease, PR Partial remission, SD Stable disease
