

Supplementary Fig. 1

Supplementary Fig. 1 OrthomAb elicits tumor immunity. B6 mice were injected intradermally with 1×10^5 B16-F10 tumor cells on day 0, and on days 3 and 6 (refer to arrows) given 150 μ g isotype control conjugate (Control) or OrthomAb. $N=4-5$ per group. **a** Daily tumor sizes (mm²). * indicates significance on a given day, and # indicates significance for area under the curve values through day 13. **b** Scatter plots of the % of CD4⁺ (left) and CD8⁺ (right) TIL that were GzmB⁺Eomes⁺ by flow cytometry.
