

Supplemental Figure S1

Supplemental Figure S1. Multiplex assay of cytokine secretion following iNKT cell restimulation with PDL1-blocked APCs.

PBMCs from healthy donors were stimulated with α GalCer-pulsed APCs with anti-PDL1 antibody or isotype control. On day 7, iNKT cells were purified and 2×10^5 cells were stimulated with 1×10^6 APCs the following day. Supernatants were collected after 24 hours and Multiplex assays were performed. P values were calculated by paired t tests. *: $p < 0.05$. isotype ctrl: isotype control, anti-PDL1: anti-PDL1 antibody.
