

# Figure S5

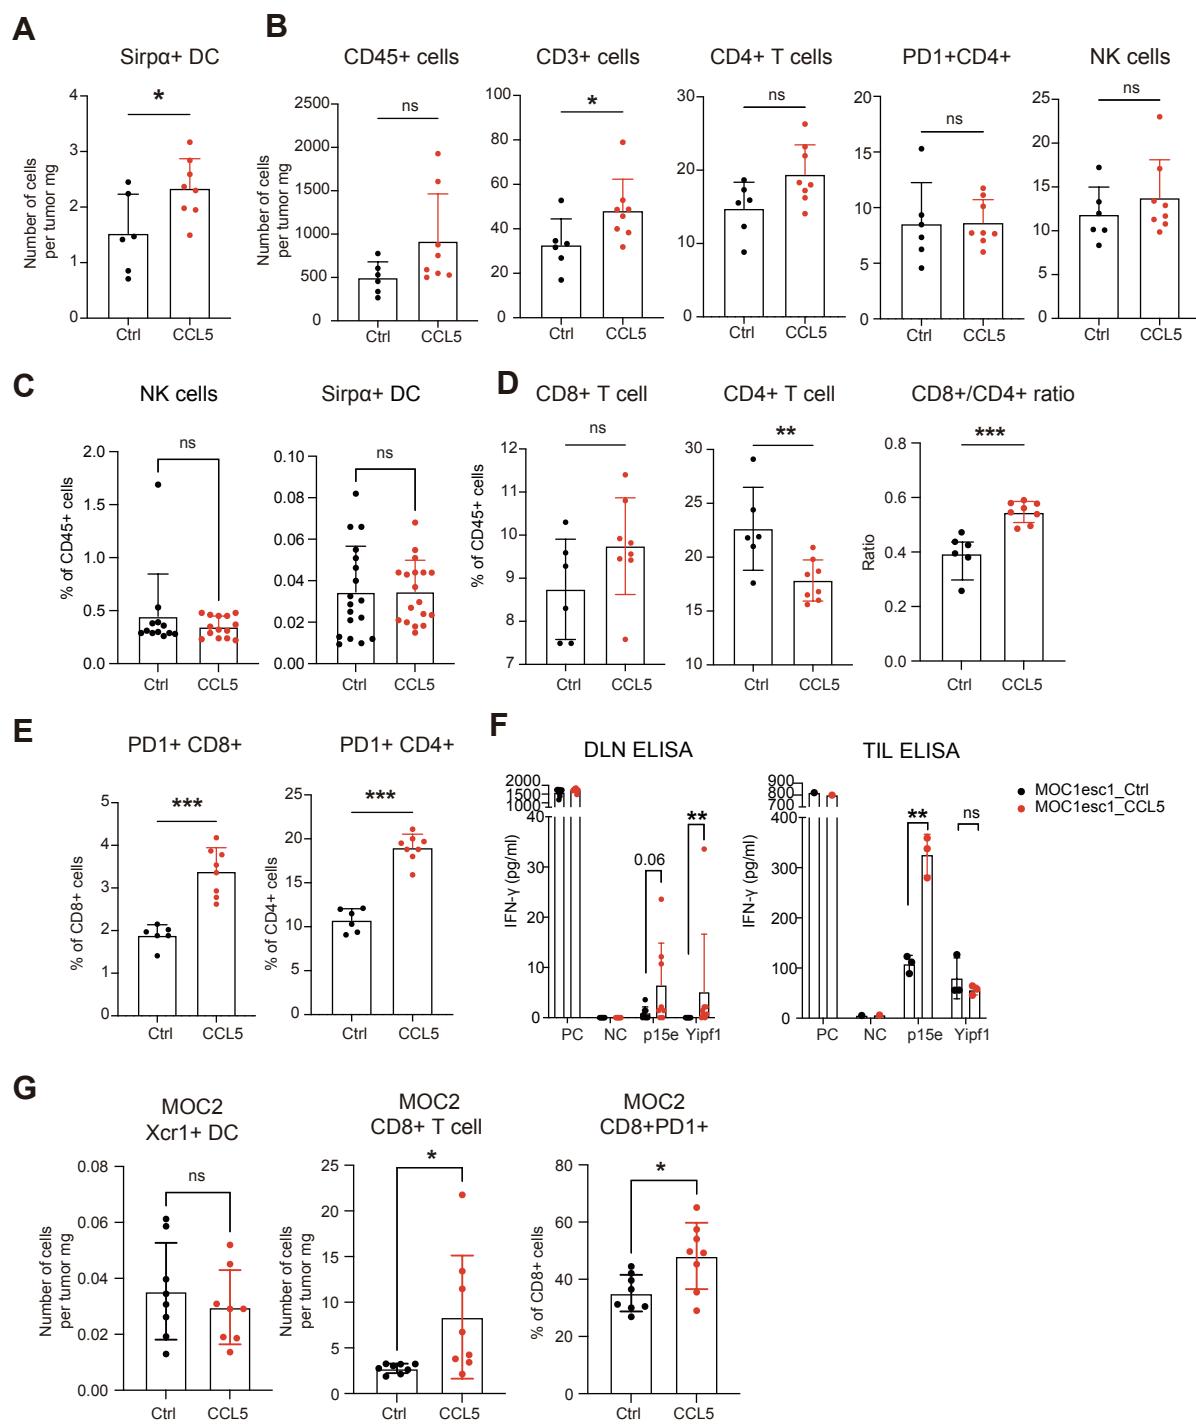

Figure S5

A, B. Flow cytometric analysis of MOC1esc1\_Ctrl and MOC1esc1\_CCL5 tumors harvested on day 16 post tumor inoculation. Number of cells per tumor mg are shown. (n=6 for esc1\_Ctrl, n=8 for esc1\_CCL5, representative data of two independent experiments.)

C. Flow cytometric analysis of MOC1esc1\_Ctrl and MOC1esc1\_CCL5 DLN harvested on day 16 post tumor inoculation. (Left panel, n=12 for Ctrl, n=14 for esc1\_CCL5, pooled data from two independent experiments. Right panel, n=18 for Ctrl, n=20 for esc1\_CCL5. Pooled data from three independent experiments.)

D, E. Flow cytometric analysis of MOC1esc1\_Ctrl and MOC1esc1\_CCL5 DLN harvested on day 16 post tumor inoculation. (n= 6 for Ctrl, n=8 for CCL5, representative data of two independent experiments.)

F. Total cells ( $5 \times 10^5$  cells/well) isolated from MOC1esc1\_Ctrl or MOC1esc1\_CCL5 DLNs were stimulated with indicated peptides for 48 hours and evaluated by IFN- $\gamma$  ELISA. PC; (positive control (PMA + ionomycin)), NC; negative control (no peptides). (Left panel, n=8. Right panel, n=3, representative data of two independent experiments.)

G. Flow cytometric analysis of MOC2\_Ctrl and MOC2\_CCL5 tumors harvested on day 10 post tumor inoculation. (n=8.)

Data are plotted as mean  $\pm$  SD in Figure S5A-G. Data were analyzed using the Mann-Whitney U Test to generate two-tailed P values in Figure S5A-G.
