

# Supplementary Figure S6

## Supplementary Figure S6. Levels of ecMYC in untreated and treated MGH1518-3A xenografts.

Measurement of MYC FISH area per cell in replicate untreated and treated xenografts. Tumor volume curves for each xenograft are shown in Comparison of distributions with non-parametric test p-values. **(A)** untreated xenografts. **(B)** OT-treated xenografts versus aggregate untreated xenografts. **(C)** EP-treated xenografts versus aggregate untreated xenografts. **(D)** Xenografts treated with reduced-dose EP followed by passage and re-growth, as described in **Fig. 4E**. Tumor volume curves for replicate xenografts are shown in **Fig. 4B-E** for each regimen, respectively. (created with BioRender.com)
