

Supplementary Figure S5. Change in SUV_{MAX} in patients with <10 days between PET0 and therapy start. Waterfall plot of change in tumor SUV_{MAX} for patients with <10 days between their baseline FDG PET/CT scan (PET0) and treatment initiation, according to treatment response. Dotted lines represent +30% and -30% change in SUV_{MAX}, respectively. SUV_{MAX} = maximal standardized uptake value, CR = complete response, PR = partial response, PD = progressive disease.
