Supplemental Figure S1. Supplemental Figure S1. Cpt1aCKO mice have larger kidneys. Kidney weights expressed as a percentage of body weight in young and aged Cpt1afl/fl and Cpt1aCKO mice. Means are shown +/- SD with * = p<0.05 and ** = p<0.01.

| | *Cpt1a*^{fl/fl} | *Cpt1a*^{CKO} |
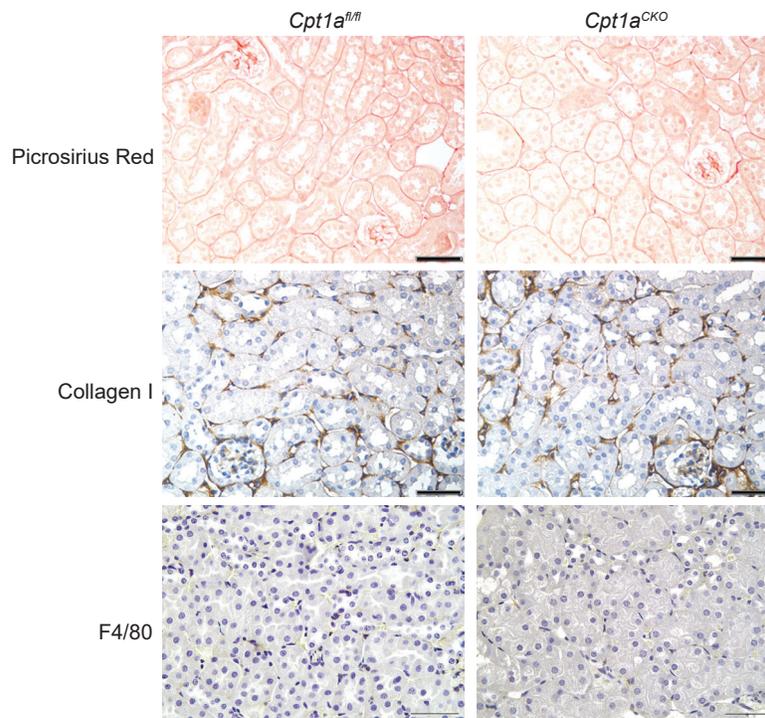

Supplemental Figure S2. Supplemental Figure S2. No difference in fibrosis or inflammation in young *Cpt1a*^{CKO} mice compared to floxed controls. Picrosirius Red staining, IHC of collagen I and F4/80 on kidney tissue of young *Cpt1a*$^{fl/fl}$ and *Cpt1a*^{CKO} mice. Scale bars = 50μM.

A

Cpt1a*fl/fl*   Cpt1a*CKO*

Young

Aged

4-HNE

B

4-HNE Quantification
Aged Mice

C
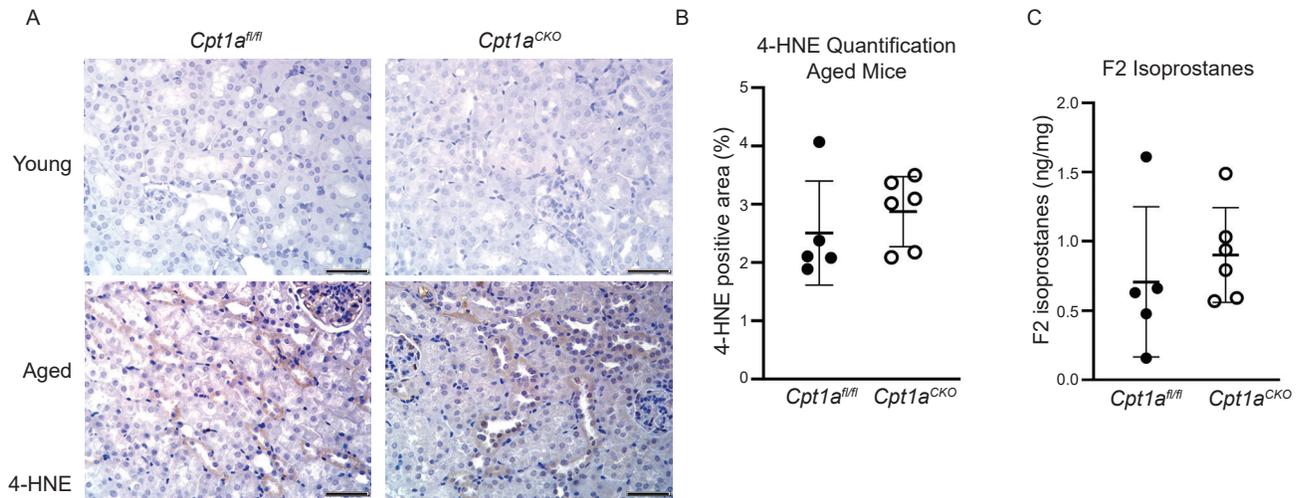

F2 Isoprostanes

Supplemental Figure S3. No difference in 4-HNE or F2 isoprostanes between genotypes. 4-HNE staining was done on aged kidney tissues and quantified using ImageJ (A, B). Urine F2 isoprostanes were measured from aged mice and reported normalized to creatinine (C). Scale bars = 50μM.
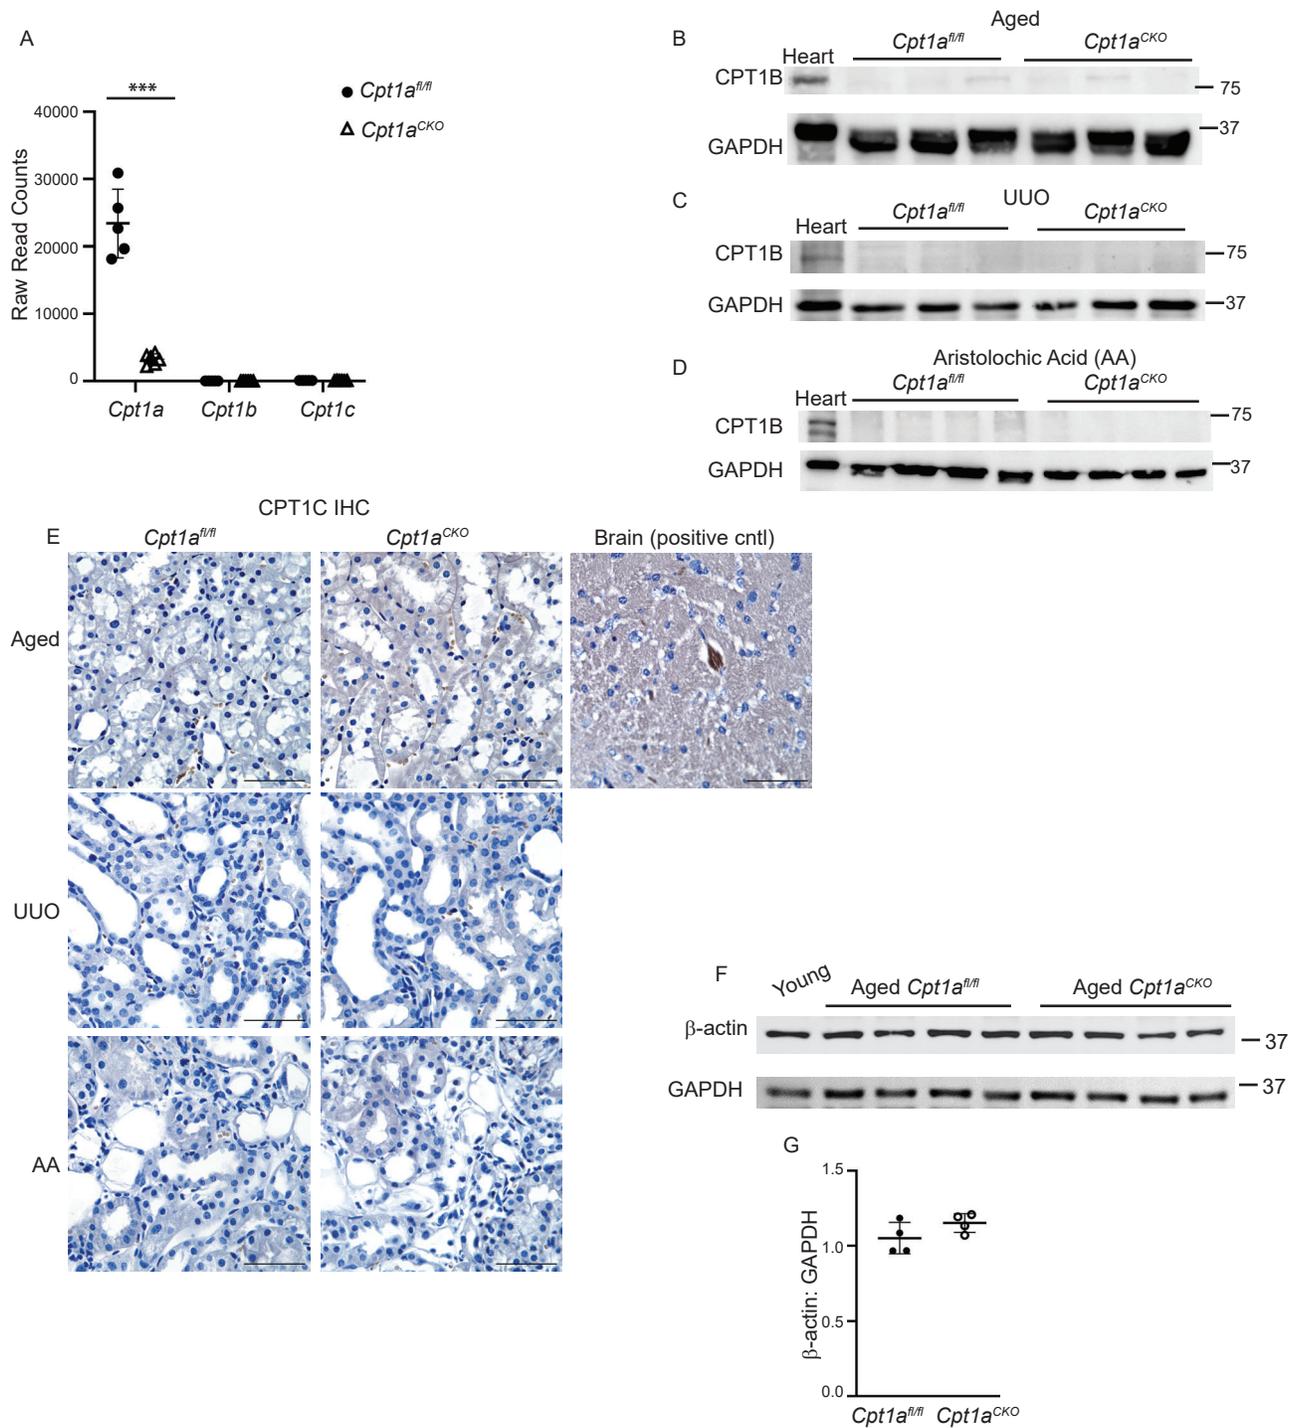

Supplemental Figure 4. Supplemental Figure S4. *Cpt1a*[CKO] kidneys do not have compensatory upregulation of *Cpt1b* and *Cpt1c*.
(A) Transcript levels of *Cpt1a*, *Cpt1b*, and *Cpt1c* from RNAseq are shown for each genotype. There was only a statistical difference between genotypes in *Cpt1a* levels, means +/- SD shown, with p value calculated using the DESeq2 package. Immunoblots for CPT1B on kidney tissue lysates from aged (B), UUO-injured (C) or AAN-injured (D) mice with heart as a positive control.
(E) Immunohistochemistry for CPT1C with brain as positive control. As heart does not express β-actin, we used GAPDH for loading control and show that GAPDH and β-actin have no significant differences as loading controls when CPT1A is deleted (F, G).
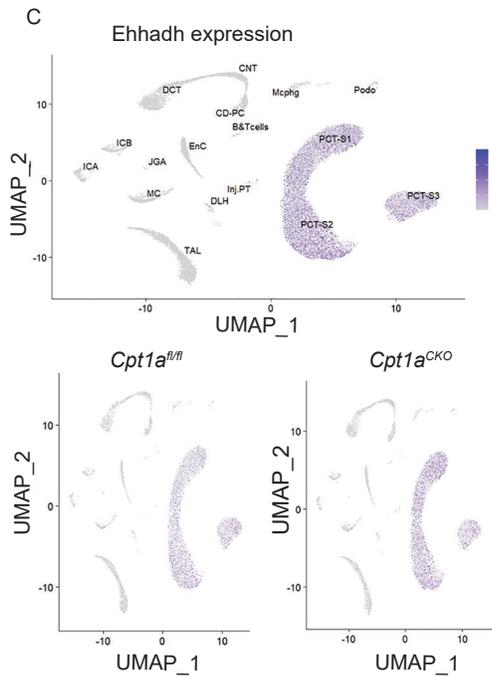

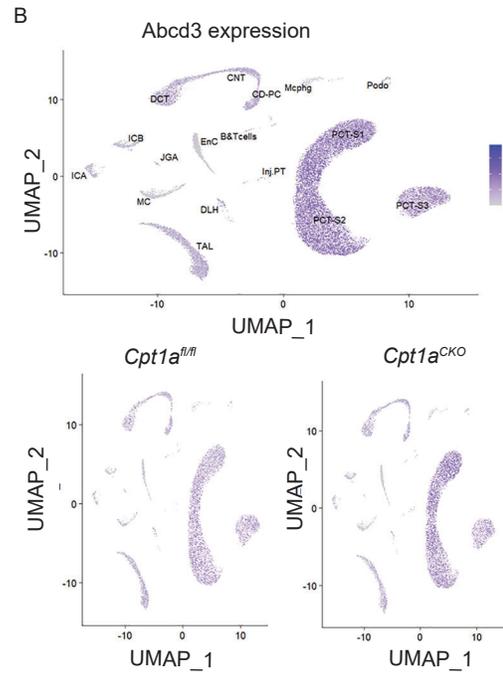

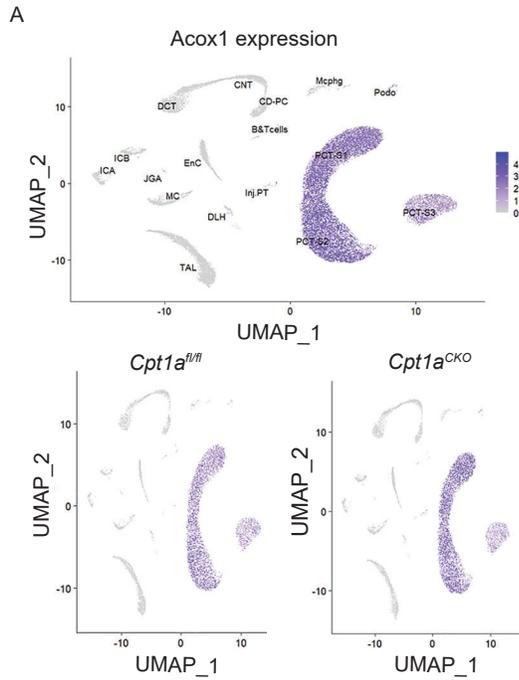

Supplemental Figure S5. UMAP dimension plots of peroxisomal genes that were significantly upregulated in *Cpt1a*[CKO] mice. Expression of *Acox1* (A), *Abcd3* (B), and *Ehhadh* (C) in different clusters from single nuclear RNA-seq shows proximal tubule-specific enrichment and increased expression in *Cpt1a*[CKO] versus *Cpt1a*[fl/fl] kidneys.

Table. List of primers used in the study
