Data are presented as the mean (SD) or number (%), as appropriate.

Abbreviations: SD, standard deviation; BMI, body mass index; TyG, triglyceride-glucose index; hsCRP: high-sensitivity C-reactive protein.

^aCalculated as weight in kilograms divided by height in meters squared.

N of missing: BMI (n=1514); residence (n=10); smoking (n=10); drinking (n=13); education (n=6).

Group 1: TyG < median & hs-CRP <1 mg/L; Group 2: TyG < median & hs-CRP ≥1 mg/L; Group 3: TyG ≥ median & hs-CRP <1 mg/L; Group 4: TyG ≥ median & hs-CRP ≥1 mg/L.

Analyses were adjusted for age, sex, residence, marriage, education level, BMI level, smoking status, current drinking, hypertension, diabetes were adjusted.

Sensitivity analysis 1 was performed among 7 126 participants without any missing data; sensitivity analysis 2 were performed using multiple imputed analyses (5 iterations) by Markov chain Monte Carlo method.

Number of missing: BMI (n=1514); residence (n=10); smoking (n=10); drinking (n=13); education (n=6).
