Supplemental Table 3: Estimated Coefficients for all Covariates in Adjusted Models with Interaction Terms	. 7

Supplemental Figures

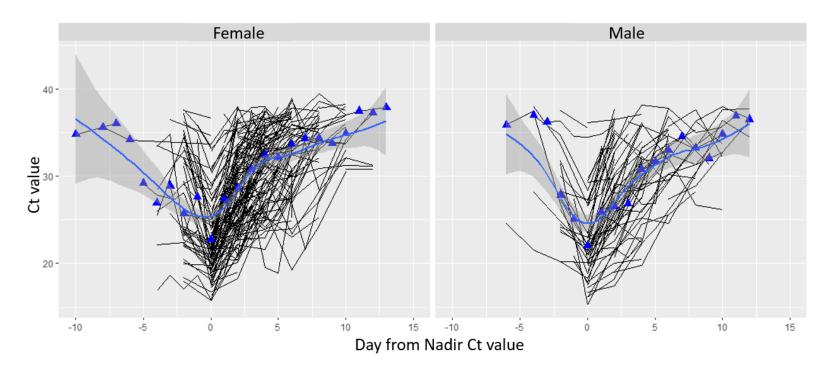

Supplemental Figure 1: Distribution of Participant Body Mass Indices by Sex

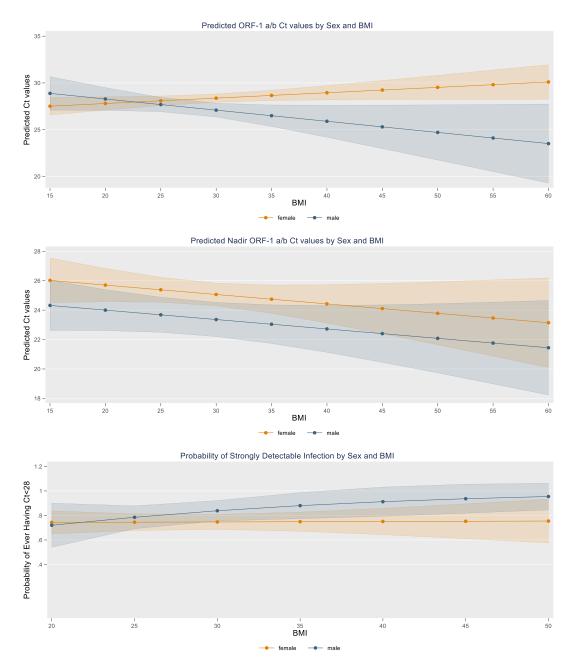

Supplemental Figure 2: Correlation of Covariates by Sex

Supplemental Figure 3: Ct Values throughout SARS-CoV-2 Infection among Males and Females

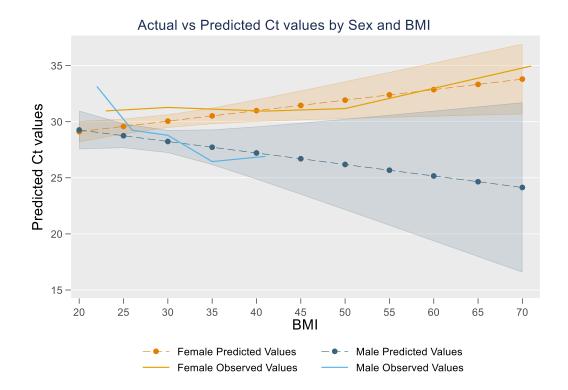

Supplemental Figure 4: Predicted ORF-1 a/b Ct values, Nadir Ct Values, and Strongly Detectable Infections by Sex and BMI

Males are shown in dark blue, and females are shown in orange. The shaded error bar represents the 95% confidence interval. Supplemental Figure 2a shows predicted cycle threshold (Ct) values for the ORF-1 a/b gene among males and females by body mass index (BMI). Figure 2b shows predicted nadir cycle threshold (Ct) values for the ORF-1 a/b gene among males and females by body mass index (BMI). Figure 2c shows probability of a strongly detected infection among males and females by body mass index (BMI). Strongly detected infection is defined as at least one ORF-1 a/b cycle threshold value below or equal to 28.

Supplemental Figure 5: Actual vs Predicted Ct Values for Model 1 by Sex and BMI

^{*}Observed values plotted as mean values

Supplemental Tables

Supplemental Table 1: Estimated Coefficients for Sex and BMI in Bivariate Models

	Model 1: Ct Values by Sex and BMI		Model 2: Nadir Ct Values by Sex and BMI		Model 3: Odds of Highly Detectable Infection by Sex and BMI ¹	
	Estimate	95% Confidence Interval	Estimate	95% Confidence Interval	Estimate	95% Confidence Interval
BMI	-0.02	(-0.08 to 0.04)	-0.12	(-0.24 to -0.01)	1.02	(0.99 to 1.05)
Male Sex	-1.15	(-2.15 to - 0.16)	-1.86	(-3.65 to -0.06)	1.72	(1.05 to 2.81)

¹Estimates from model 3 are exponentiated.

Supplemental Table 2: Estimated Coefficients for All Variables in Adjusted Models

	Model 1: Ct Values by Sex and BMI ²		Model 2: Nadir Ct Values by Sex and BMI ³		Model 3: Odds of Highly Detectable Infection by Sex and BMI ^{1,3}	
	Estimate	95% Confidence Interval	Estimate	95% Confidence Interval	Estimate	95% Confidence Interval
Fixed Effects:						
Male sex	-1.49	-2.5 to -0.49	-2.65	-4.2 to -1.05	2.39	1.3 to 4.4
