

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: A list of G3BP1, TRIM25 and TRIM25 Δ PTFG proximity interacting proteins before and after Poly(I:C) treatment was identified by mass spectrometry. HEK293T cells were transfected with G3BP1-BirA*, TRIM25-BirA* and TRIM25 Δ PTFG-BirA*. Protein components spatially localized to G3BP1 and TRIM25 were identified by mass spectrometry. Also included are our manually annotated 'Antiviral proteins'.
